 significant benefits they provide in built environments Topics covered include soil condition and roots improving tree root

 Biology of Root Formation and Development that was held in Jerusalem Israel June 23 28 1996 Following the First
 Symposium on the Biology of Adventitious Root Formation held in Dallas USA 1993 we perceived the need to include all
 kinds of roots not only the shoot borne ones The endogenous signals that control root formation and the subsequent growth
 and development processes are very much alike regardless of the sites and sources of origin of the roots Therefore we
 included in the Second Symposium contributions on both shoot borne i.e. adventitious roots and root borne i.e. lateral roots
 Plant roots have remained an exciting and an intriguing field of science During the years that followed the first symposium an
