González,Farook

Hamzeh,Luis Fernando Alarcón,2022-12-30 This book introduces and develops the novel concept of Lean Construction 4 0 The capability of Lean Construction to effectively adapt the architecture engineering construction AEC industry to this new era of digital transformation requires a reconceptualization of the triad people processes technology as a foundation for the theoretical and practical framework of Lean Construction Therefore a shift towards Lean Construction 4 0 is required Lean Construction 4 0 is a new systems wide thinking approach where synergies and overlaps between Lean Construction and digital smart technologies go far beyond BIM to reshape the way we design manage and operate capital projects in the modern age of automation This pioneering new book brings together the views of world experts at the interface of Lean Construction and digital smart technologies in order to channel research efforts to introduce and discuss current research and practice challenges and drivers and future perspectives of Lean Construction 4 0 It is not the aim of the book to keep

adding digits to the term Lean Construction to catch up with the industry revolutions as they go on. Instead, after reading this book, it will be undeniable for readers that the triad process, people, technology, as proposed by Lean Construction 4.0, is required to achieve an effective, long-lasting digital transformation of the AEC industry. Thus, the aim of Lean Construction 4.0 is better explained by what it evokes: a future vision of construction systems comprising people, processes, and technology using Industry 4.0/5.0 as a basis for technological innovation in the AEC industry, coupled with Lean Construction theory and practice as a jettison for improved processes and systems integration. The Lean Construction 4.0 concept, coined and developed in this edited book, is unique, and the chapters provide practitioners and academics with a provocative reflection on the theoretical and practical aspects that shape the Lean Construction 4.0 concept. More importantly, Lean Construction 4.0 proposes a rationale for the AEC industry not only to survive but to thrive.

Tools for Complex Projects Kaye Remington, Julien Pollack, 2016-02-24. Traditional project management approaches assume that project contexts are unchanging and key factors, though complicated, are reducible to unambiguous elements for management and control. Whilst this assumption has simplified the task for writers and educators, it is increasingly being recognised that these techniques do not work in projects which may be described as complex due to their size, technical difficulties, conflicting environmental and political constraints, or poorly understood or shared goals. *Tools for Complex Projects* draws on research in the areas of project management, complexity theory, and systems thinking to provide a ready reference for understanding and managing the increasing complexity of projects and programmes. The main part of the book provides a series of fourteen project tools. Some of these tools may be used at the level of the whole project life cycle. Others may be applied ad hoc at any time. In each case, the authors provide detailed guidelines for using the tool, information on its purpose, and the types of complexity for which it is most appropriate. The book provides the theoretical background to the tool, a practical example of its use, and any necessary words of caution. This is an example of advanced project management at work: sophisticated tools that require a level of project and management expertise and offer rigorous and highly practical methods for understanding, structuring, and managing the most
