**Cultural Conceptions of Mental Health and Therapy** Anthony J. Marsella, G. White, 2012-12-06 Within the past two decades there has been an increased interest in the study of culture and mental health relationships This interest has extended across many academic and professional disciplines including anthropology psychology sociology psychiatry public health and social work and has resulted in many books and scientific papers emphasizing the role of sociocultural factors in the etiology epidemiology manifestation and treatment of mental disorders It is now evident that sociocultural variables are inextricably linked to all aspects of both normal and abnormal human behavior But in spite of the massive accumulation of data regarding culture and mental health relationships sociocultural factors have still not been incorporated into existing biological and psychological perspectives on mental disorder and therapy Psychiatry the Western medical specialty concerned with mental disorders has for the most part continued to ignore socio cultural factors in its theoretical and applied approaches to the problem The major reason for this is psychiatry's continued commitment to a disease conception of mental disorder which assumes that mental disorders are largely biologically caused illnesses which are universally represented in etiology and manifestation Within this perspective mental disorders are regarded as caused by

universal processes which lead to discrete and recognizable symptoms regardless of the culture in which they occur However this perspective is now the subject of growing criticism and debate      *Illness Behavior* Sean McHugh,T. Michael Vallis,2012-12-06 In August 1985 the 2nd International Conference on Illness Behaviour was held in Toronto Ontario Canada The first International Conference took place one year previous in Adelaide South Australia Australia This book is based on the proceedings of the second conference The purpose behind this conference was to facilitate the development of a single integrated model to account for illness experience and presentation A major focus of the conference was to outline methodological issues related to current behaviour research A multidisciplinary approach was emphasized because of the bias that collaborative efforts are likely to be the most successful in achieving greater understanding of illness behaviour Significant advances in our knowledge are occurring in all areas of the biological and social sciences albeit more slowly in the latter areas Marked specialization in each of these areas has lead to greater difficulty in integrating new knowledge with that of other areas and the development of a meaningful cohesive model to which all can relate Thus there is a major need for forums such as that provided by this conference      Remembering to Live M. *Hippocrates' Woman* Helen King,2002-01-04 Hippocrates Woman demonstrates the role of Hippocratic ideas about the female body in the subsequent history of western gynaecology It examines these ideas not only in the social and cultural context in which they were first produced but also the ways in which writers up to the Victorian period have appealed to the material in support of their own theories Among the conflicting tangle of images of women given in the Hippocratic corpus existed one tradition of the female body which says it is radically unlike the male body behaving in different ways and requiring a different set of therapies This book sets this model within the context of Greek mythology especially the myth of Pandora and her difference from men to explore the image of the body as something to be read Hippocrates Woman presents an arresting study of the origins of gynaecology an exploration of how the interior workings of the female body were understood and the influence of Hippocrates theories on the gynaecology of subsequent ages *The Conceptual Structure*
