

A Lens on the Universe

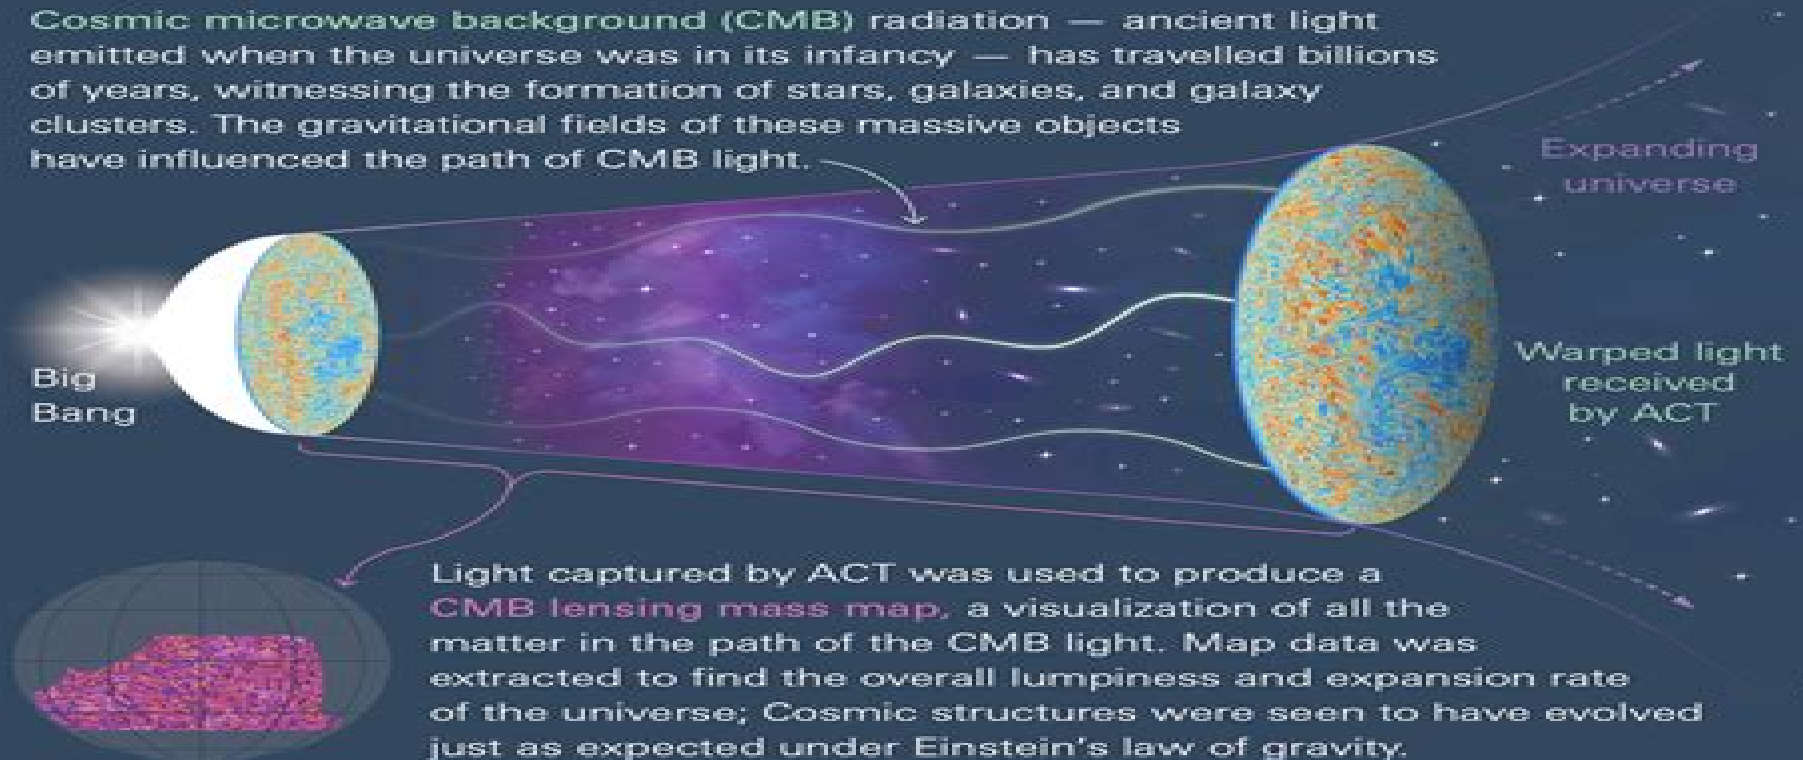

Measuring the amount of matter in the universe — including the invisible dark variety thought to account for ~85% of matter — is fundamental to understanding the evolution of the universe. Using a phenomenon called ‘gravitational lensing’ scientific collaborators have produced the most precise matter map to date. The results were obtained using the Atacama Cosmology Telescope (ACT) in Chile.

Gravitational lensing occurs when light travels near a massive object — such as a galaxy, galaxy cluster, or clump of dark matter. The gravitational field generated by these huge objects bends the light’s path.

Mapping Matter with Light

Cosmic microwave background (CMB) radiation — ancient light emitted when the universe was in its infancy — has travelled billions of years, witnessing the formation of stars, galaxies, and galaxy clusters. The gravitational fields of these massive objects have influenced the path of CMB light.

A Ray of Light in a Sea of Dark Matter

Charles Keeton, 2014-04-30 What is in the dark Countless generations have gazed up at the night sky and asked this question the same question that cosmologists ask themselves as they study the universe The answer turns out to be surprising and rich The space between stars is filled with an exotic substance called dark matter that exerts gravity but does not emit absorb or reflect light The space between galaxies is rife with dark energy that creates a sort of cosmic antigravity causing the expansion of the universe to accelerate Together dark matter and dark energy account for 95 percent of the content of the universe News reporters and science journalists routinely talk about these findings using terms that they assume we have a working knowledge of but do you really understand how astronomers arrive at their findings or what it all means Cosmologists face a conundrum how can we study substances we cannot see let alone manipulate A powerful approach is to observe objects whose motion is influenced by gravity Einstein predicted that gravity can act like a lens to bend light Today

we see hundreds of cases of this instances where the gravity of a distant galaxy distorts our view of a more distant object creating multiple images or spectacular arcs on the sky Gravitational lensing is now a key part of the international quest to understand the invisible substance that surrounds us and binds the universe together A Ray of Light in a Sea of Dark Matter offers readers a concise accessible explanation of how astronomers probe dark matter Readers quickly gain an understanding of what might be out there how scientists arrive at their findings and why this research is important to us Engaging and insightful Charles Keeton gives everyone an opportunity to be an active learner and listener in our ever expanding universe Watch a video with Charles Keeton Watch video now <http://www.youtube.com/watch?v=Uc3byXNS1G0>

Reconciliation James W. Dees,2008-07-01 Appreciating the magnificence of Jesus gift is difficult How can you appreciate the magnificence of something that you cannot understand Logic a few recent scientific discoveries and two faith choices tell us the purpose of our mortal bodies provide evidence for the existence of our souls and define the nature of our souls Our mortal bodies provide a critical experience that our souls cannot obtain in any other way The nature of the world in which our souls exist as well as the nature of time is then described as well as why mortals and souls experience time differently The two faith choices used in conjunction with these scientific discoveries are that God is love and that we are being created in the image of God When all these things are considered it then becomes possible to understand the necessity and magnificence of Jesus sacrifice

Light Zoltán Nédá,Madeea Axinciuc,2019-04-15 The book is aiming programmatically at showing that both in science and religious thinking the basic space time entity is ultimately built and defined by light In this sense the book is emphasizing the unique role of light in understanding the world around us The approach is based on the belief that science and religion represent two very different modes of addressing reality both of them being relevant to us as human beings The language of science and religion and the answers they each

give to the same questions differ due to the elementary postulates on which they are built A dialogue and debate in the classical sense is therefore meaningless This is why the book has allowed the voice of Physics and the voice of the Philosophy of Religion to be heard in their distinctiveness and nobility Instead of endless polemics the work proposes to acknowledge with patience and respect the altera pars approach for the same overarching topics highlighting the complexity of both domains and on a transdisciplinary level pointing towards the complexity of our mind and reality The book is illustrated by Valentin Petridean The images mirror and enrich the rigorous game of the intellect illuminating it with sparks of vivid imagination CONTENTS Memories from the past and the need for a new dialogue Experiment versus Experience The Nitty Gritty of Light The Nature of Light Colours and Perception Producing and Absorbing Light The Speed of Light s Propagation Light and Aether Ideal Space Tangible Space Ideal Time Tangible Time The Principle of Relativity The Aftermath Changing Paradigms Memories of the Future Concluding remarks Light Dark Matter in Theory and Experiment
