Earth-Shattering Bob Berman, 2019-02-19 A heart pumping exploration of the biggest explosions in history from the Big Bang to mysterious activity on Earth and everything in between The overwhelming majority of celestial space is inactive and will remain forever unruffled Similarly more than 90 percent of the universe s 70 billion trillion suns had non attention getting births and are burning through their nuclear fuel in steady predictable fashion But when cosmic violence does unfold it changes the very fabric of the universe with mega explosions and ripple effects that reach the near limits of human comprehension From colliding galaxies to solar storms and gamma ray bursts to space and time warping upheavals these moments are rare yet powerful often unseen but consequentially felt Likewise here on Earth existence as we know it is fragile always vulnerable to hazards both natural and manufactured As we ve learned from textbooks and witnessed in Hollywood blockbusters existential threats such as biological disasters asteroid impacts and climate upheavals have the all too real power to instantaneously transform our routine centered lives into total chaos or much worse While we might be helpless to stop these catastrophes whether they originate on our own planet or in the farthest reaches of space the science behind such cataclysmic forces is as fascinating as their results can be devastating In *Earth Shattering* astronomy writer Bob Berman guides us through an epic all inclusive investigation into these instances of violence both mammoth and microscopic From the sudden creation of dazzling new stars to the furiously explosive birth of our moon from the uncomfortable truth about ultra high energy cosmic rays bombarding us to the incredible ways in which humanity has harnessed cataclysmic energy for its gain Berman masterfully synthesizes some of our worst fears into an

astounding portrait of the universe that promises to transform the way we look at the world's around us In the spirit of Neil deGrasse Tyson and Carlo Rovelli what emerges is a rollicking profound and even humbling exploration of all the things that can go bump in the night

Astroquizzical Jillian Scudder, 2018-03-08 In this enthralling cosmic journey through space and time astrophysicist Jillian Scudder locates our home planet within its own family tree Our parent the Earth and its sibling planets in our solar system formed within the same gas cloud Without our grandparent the Sun we would not exist and the Sun in turn relies on the Milky Way as its home The Milky Way rests in a larger web of galaxies that traces its origins right back to tiny fluctuations in the very early universe Following these cosmic connections we discover the many ties that bind us to our universe Based around readers questions from the author's popular blog Astroquizzical the book provides a quirky guide to how things work in the universe and why things are the way they are from shooting stars on Earth to black holes to entire galaxies For anyone interested in the big picture of how the cosmos functions and how it is all connected Jillian Scudder is the perfect guide

Physics and Astrophysics Subal Kar, 2022-05-05 Physics and Astrophysics Glimpses of the Progress provides a comprehensive account of physics and astrophysics from the time of Aristotle to the modern era of Stephen Hawking and beyond It takes the readers of all ages through a pleasant journey touching on the major discoveries and inventions that have taken place in both the macro world including that in the cosmos and the micro world of atomic and subatomic particles related to physics and astrophysics Use of historical perspective and anecdote makes the storytelling on the progress of physics and astrophysics both interesting and absorbing While peering through different developments in these fields the book never compromises with the sanctity of the scientific content including the depth and beauty of the physical concept of the topics concerned and the philosophical viewpoints they represent Where appropriate the book also delves into value judgments of life that affect our civilization Features The intricate concepts of physics and astrophysics are explained in simple terms and in easy to understand language Physics and astrophysics are discussed in a connected and correlated way in a single volume of comprehensive size but in totality which to date is the unique feature of this book Starting with Aristotle's Physics and going through the work of Newton Einstein Schrödinger Hubble Hewish Hawking and others including the present research on dark energy dark matter and the fifth force of nature the reader will be kept absorbed and spellbound In addition to the fundamental principles of Newtonian mechanics Einstein's relativity quantum mechanics string theory loop quantum gravity and so on the cutting edge technologies of recent times such as the Large Hadron Collider Laser Interferometer Gravitational wave Observatory and Event Horizon Telescope are also explored The book is aimed primarily at undergraduate and graduate students researchers and professionals studying physics and astrophysics General readers will also find the book useful to quench their thirst for knowledge about the developments in physics and astrophysics
