Linear Differential Equations in Banach Space S. G. Krein, 2011-07-14 Second Order Linear Differential Equations in Banach Spaces H.O. Fattorini, 2011-08-18

Second order linear differential equations in Banach spaces can be used for modelling such second order equations of mathematical physics as the wave equation the Klein Gordon equation et al In this way a unified treatment can be given to subjects such as growth of solutions singular perturbation of parabolic hyperbolic and Schrödinger type initial value problems and the like The book covers in detail these subjects as well as the applications to each specific problem

Excerpt from *Linear Differential Equations in Banach Spaces* Here t is a real variable the unknown function $u(t)$ and the given function $f(t)$ take values in a Banach space X and $A(t)$ is a given function whose values are linear operators in X We wish to find the solution of or 1 $1a$ when the initial value $u(a)$ is prescribed The problem is rather trivial if the Operators $A(t)$ are bounded and say strongly continuous in t for then the solution can be obtained by a standard iteration procedure But we are mainly interested in the case where the $A(t)$ are unbounded so that their domains are proper subsets of X In such a case the existence of the solution is by no means obvious About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Degenerate Differential Equations in Banach Spaces Angelo Favini, Atsushi Yagi, 1998-09-10 This work presents a detailed study of linear abstract degenerate differential equations using both the semigroups generated by multivalued linear operators and extensions of the operational method from Da Prato and Grisvard The authors describe the recent and original results on PDEs and algebraic differential equations and establishes the analyzability of the semigroup generated by some degenerate parabolic operators in spaces of continuous functions
