History Of The Sciences:

A History of the Sciences Stephen Finney Mason,1962 A History of the Sciences Stephen Finney Mason,1962

Reader's Guide to the History of Science Arne Hessenbruch,2013-12-16 The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn **The Study of the History of Science** George Sarton,1936 *A History of the Sciences* ,1953

Introduction to the History of Science George Sarton,1927 The Cambridge History of Science: Volume 5, The Modern Physical and Mathematical Sciences David C. Lindberg,Mary Jo Nye,Roy Porter,Ronald L. Numbers,2003 A new and comprehensive examination of the history of the modern physical and mathematical sciences History of the Inductive Sciences William Whewell,1837 Main Currents of Scientific Thought Stephen Finney Mason,1960 **A History of the Sciences** ,1977 Science and Technology in World History, Volume 3 David Deming,2014-01-10 This installment in a series on science and technology in world history begins in the fourteenth century explaining the origin and nature of scientific methodology and the relation of science to religion philosophy military history economics and technology Specific topics covered include the Black Death the Little Ice Age the invention of the printing press Martin Luther and the Reformation the birth of modern medicine the Copernican Revolution Galileo Kepler Isaac Newton and the Scientific Revolution *Science* Patricia Fara,2009 In *Science* Patricia Fara rewrites science's past to provide new ways of understanding and questioning our modern technological society Aiming not just to provide information but to make people think this unique book explores how science has become so powerful by describing the financial interests and imperial ambitions behind its success Sweeping through the centuries from ancient Babylon right up to the latest hi tech experiments in genetics and particle physics Fara's book also ranges internationally challenging notions of European superiority by emphasising the importance of scientific projects based around the world including revealing discussions of China and the Islamic Empire alongside the more familiar stories about Copernicus's sun centered astronomy Newton's gravity and Darwin's theory of evolution We see for instance how Muslim leaders encouraged science by building massive libraries hospitals and astronomical observatories and we rediscover the significance of medieval Europe long overlooked where surprisingly religious institutions ensured science's survival as the learning preserved in monasteries was subsequently developed in new and unique institutions universities Instead of focussing on esoteric experiments and abstract theories she explains how science belongs to the practical world of war politics and business And rather than glorifying scientists as idealized heroes she tells true stories about real people men and some women who needed to earn their living who made mistakes and who trampled down their rivals Finally this provocative volume challenges scientific supremacy itself arguing that science is

successful not because it is always indubitably right but because people have said that it is right Science dominates modern life but perhaps the globe will be better off by limiting science's powers and undoing some of its effects Dismantling popular myths taking a truly global view and dispensing with false idols Fara's highly readable survey of science's histories is a breath of fresh air She unerringly pinpoints the defining moods of each age treating the past with respect and the present with discernment This wonderfully literate book tells a story that is far far more interesting than the tidy fictions of hindsight Philip Ball Consultant Editor of Nature It's been a very long time since any reputable historian of science had the desire the knowledge or the nerve to undertake a book like this an attempt to survey the development of science from Antiquity to the present notably including non European materials Patricia Fara has succeeded Science is an elegant and compact creative synthesis of the piecemeal researches of generations of academic historians It deserves the widest possible readership Steven Shapin Professor of the History of Science Harvard and author of The Scientific Revolution Patricia Fara lectures in the History and Philosophy of Science at the University of Cambridge and is the Senior Tutor of Clare College She is the author of numerous books including Fatal Attraction Magnetic Mysteries of the Enlightenment and Newton The Making of Genius Her writing has appeared in History Today New Scientist Nature The Times and New Statesman and she writes a regular column on scientific portraits for Endeavour Books by the same author Fatal Attraction Magnetic Mysteries of the Enlightenment by Patricia Fara Published 2005 Publisher Icon Books Price L9 99 Pandora's Breeches Women Science and Power in the Enlightenment by Patricia Fara Published 2004 Publisher Pimlico Price L12 99 Sex Botany and Empire the Stories of Carl Linnaeus and Joseph Banks by Patricia Fara Published 2003 Publisher Icon Books Price L6 99 Newton the Making of Genius by Patricia Fara Published 2002 Publisher Macmillan Price L20 An Entertainment for Angels Electricity in the Enlightenment by Patricia Fara Publish

Excerpt from A Short History of Science This book is the outgrowth of a lecture course given by the authors for several years to undergraduate classes of the Massachusetts Institute of Technology the chief aims of the course being to furnish a broad general perspective of the evolution of science to broaden and deepen the range of the students interests and to encourage the practice of discriminating scientific reading There are of course excellent treatises on the history of particular sciences but these are as a rule addressed to specialists and concern themselves but little with the important relations of the sciences one to another or to the general progress of civilization The present work aims to furnish the student and the general reader with a concise account of the origin of that scientific knowledge and that scientific method which especially within the last century have come to have so important a share in shaping the conditions and directing the activities of human life The specialist in any branch of science is finding it more and more difficult to keep

himself informed even to the indispensable minimum extent as to current progress in his own field and hence his frequent neglect of all other branches than his own It may reasonably be expected that some attention to the history of science on the part of students will give them a better understanding of the broad tendencies which have determined the general course of scientific progress will enlarge their appreciation of the work of successive generations and tend to guard them against falling into those ancient pitfalls which have bordered the paths of progress In the words of Mach There is no grander nor more intellectually elevating spectacle than that of the utterances of the fundamental investigators in their gigantic power About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Introduction to the History of Science George Sarton, 1975 **An Introduction to the History of Science** Walter Libby, James Zimmerhoff, 2017-07-13 It is only by teaching the sciences in their historical development that the schools can be true to the two principles of modern education that the sciences should occupy the foremost place in the curriculum and that the individual mind in its evolution should rehearse the history of civilization The history of science should be given a larger place than at present in general history for as Bacon said the history of the world without a history of learning is like a statue of Polyphemus with the eye out The history of science studies the past for the sake of the future It is a story of continuous progress It is rich in biographical material It shows the sciences in their interrelations and saves the student from narrowness and premature specialization It affords a unique approach to the study of philosophy It gives new motive to the study of foreign languages It gives an interest in the applications of knowledge offers a clue to the complex civilization of the present and renders the mind hospitable to new discoveries and inventions The history of science is hostile to the spirit of caste It shows the sciences rising from daily needs and occupations formulated by philosophy enriching philosophy giving rise to new industries which react in turn upon the sciences The history of science reveals men of all grades of intelligence and of all social ranks cooperating in the cause of human progress It is a basis of intellectual and social homogeneity Science is international English Germans French Italians Russians all nations contributing to advance the general interests Accordingly a survey of the sciences tends to increase mutual respect and to heighten the humanitarian sentiment The history of science can be taught to people of all creeds and colors and cannot fail to enhance in the breast of every young man or woman faith in human progress and good will to all mankind This book is intended as a simple introduction taking advantage of the interests of youth of from seventeen to twenty two years of age and their intellectual compeers in order to direct their attention to the story of the development of the sciences It makes no claim

to be in any sense complete or comprehensive It is therefore a psychological introduction having the mental capacity of a certain class of readers always in view rather than a logical introduction which would presuppose in all readers both full maturity of intellect and considerable initial interest in the history of science I cannot conclude this preface without thanking those who have assisted me in the preparation of this book Sir William Osler who read the first draft of the manuscript and aided me with his counsel Dr Charles Singer who read all the chapters in manuscript and to whom I am indebted for advice in reference to the illustrations and for many other valuable suggestions the officers of the Bodleian Library whose courtesy was unfailing during the year I worked there Professor Henry Crew who helped in the revision of two of the chapters by his judicious criticism Professor J E Rush whose knowledge of bacteriology improved the chapter on Pasteur Professor L O Grondahl who read one of the chapters relating to the history of physics and suggested important emendations and Dr John A Brashear who contributed valuable information in reference to the activities of Samuel Pierpont Langley I wish to express my gratitude also to Miss Florence Bonnet for aid in the correction of the manuscript

An Introduction to the History of Science (Classic Reprint) Walter Libby, 2018-01-15 Excerpt from An Introduction to the History of Science The history of science has something to offer to the humblest intelligence It is a means of impart ing a knowledge of scientific facts and principles to unschooled minds At the same time it affords a simple method of school instruction Those who understand a business or an institution best as a contemporary writer on finance remarks are those who have made it or grown up with it and the next best thing is to know how it has grown up and then watch or take part in its actual working Generally speaking we know best what we know in its origins The history of science is an aid in scientific research It places the student in the current of scientific thought and gives him a clue to the purpose and necessity of the theories he is required to master It presents science as the constant pursuit of truth rather than the formulation of truth long since re vealed it shows science as progressive rather than fixed dynamic rather than static a growth to which each may contribute It does not paralyze the self activity of youth by the record of an infallible past It is only by teaching the sciences in their bistori cal development that the schools can be true to the two principles of modern education that the sciences should occupy the foremost place in the curriculum and that the individual mind in its evolution should rehearse the history of civilization About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
