History Of Science Technology Phi Volume 1:

Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin, 2013-11-11
The Encyclopaedia fills a gap in both the history of science and in cultural studies. Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works. The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures' science. Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas. The Western academic divisions of science, technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected. This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity. The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today. There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does. xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa.

Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin, 2008-03-12 Here at last is the massively updated and augmented second edition of this landmark encyclopedia. It contains approximately 1000 entries dealing in depth with the history of the scientific, technological and medical accomplishments of cultures outside of the United States and Europe. The entries consist of fully updated articles together with hundreds of entirely new topics. This unique reference work includes intercultural articles on broad topics such as mathematics and astronomy as well as thoughtful philosophical articles on concepts and ideas related to the study of non-Western Science such as rationality, objectivity and method. You'll also find material on religion and science, East and West, and magic and science.

Science and Technology in World History, Volume 1 David Deming, 2014-01-10 Science is a living organic activity, the meaning and understanding of which have evolved incrementally over human history. This book, the first in a roughly chronological series, explores the development of the methodology and major ideas of science in historical context from ancient times to the decline of classical civilizations around 300 A.D. It includes details specific to the histories of specialized sciences including astronomy, medicine and physics along with Roman engineering and Greek philosophy. It closely describes the contributions of such individuals as Pythagoras, Hippocrates, Socrates, Plato, Aristotle, Alexander the Great, Euclid, Archimedes, Ptolemy, Seneca, Pliny the Elder and Galen.

Science and Technology in World History, Volume 4 David Deming, 2016-04-05 The history of science is a story of human discovery intertwined with religion, philosophy, economics and technology. The fourth in a series, this book covers the beginnings of the modern world when 16th century Europeans began to realize that their scientific achievements surpassed those of the Greeks and Romans. Western

Civilization organized itself around the idea that human technological and moral progress was achievable and desirable Science emerged in 17th century Europe as scholars subordinated reason to empiricism Inspired by the example of physics men like Robert Boyle began the process of changing alchemy into the exact science of chemistry During the 18th century European society became more secular and tolerant Philosophers and economists developed many of the ideas underpinning modern social theories and economic policies As the Industrial Revolution fundamentally transformed the world by increasing productivity people became more affluent better educated and urbanized and the world entered an era of unprecedented prosperity and progress History of Soy Nutritional Research (1946-1989) William Shurtleff; Akiko Aoyagi,2021-02-07 The world's most comprehensive well documented and well illustrated book on this subject With extensive subject and geographic index 20 photographs and illustrations many color Free of charge in digital PDF format

Babaylan Sing Back depicts the embodied voices of Native Philippine ritual specialists popularly known as babaylan. These ritual specialists are widely believed to have perished during colonial times or to survive on the margins in the present day. They are either persecuted as witches and purveyors of superstition or valorized as symbols of gender equality and anticolonial resistance. Drawing on fieldwork in the Philippines and in the Philippine diaspora, Grace Nono's deep engagement with the song and speech of a number of living ritual specialists demonstrates Native historical agency in the 500th year anniversary of the contact between the people of the Philippine Islands and the European colonizers.

The Twenty Years' Crisis, 1919-1939 Edward Hallett Carr, 1964

Machines as the Measure of Men Michael Adas, 2015-06-04

Over the past five centuries, advances in Western understanding of and control over the material world have strongly influenced European responses to non-Western peoples and cultures. In *Machines as the Measure of Men*, Michael Adas explores the ways in which European perceptions of their scientific and technological superiority shaped their interactions with people overseas. Adopting a broad comparative perspective, he analyzes European responses to the cultures of sub-Saharan Africa, India, and China—cultures that they judged to represent lower levels of material mastery and social organization. Beginning with the early decades of overseas expansion in the sixteenth century, Adas traces the impact of scientific and technological advances on European attitudes toward Asians and Africans and on their policies for dealing with colonized societies. He concentrates on British and French thinking in the nineteenth century when he maintains that scientific and technological measures of human worth played a critical role in shaping arguments for the notion of racial supremacy and the civilizing mission ideology which were used to justify Europe's domination of the globe. Finally, he examines the reasons why many Europeans grew dissatisfied with and even rejected this gauge of human worth after World War I and explains why it has remained important to Americans. Showing how the scientific and industrial revolutions contributed to the development of European imperialist ideologies, *Machines as the Measure of Men* highlights the cultural factors that have nurtured disdain for non-Western accomplishments and value systems. It also indicates how these attitudes in shaping policies that restricted the diffusion of scientific knowledge have perpetuated themselves and contributed significantly to chronic underdevelopment throughout the developing world. Adas's far-reaching and provocative book will be compelling reading for all who are concerned about the history of Western imperialism and its legacies. First published to wide acclaim in 1989, *Machines as the Measure of Men* is now available in a new edition that features a preface by the author that discusses how subsequent developments in gender and race studies as well as global technology and politics enter into conversation with his original arguments.
