

# THE EVOLUTION OF TECHNOLOGY & Its Impact on the Development of Social Businesses

We are babies.

**1960s**

Technology has **little impact**.  
It is a curiosity.

We are still children.

**1970s**

Technology is for academics  
and has **little impact**.

We are still children,  
but we can pretend to  
get what we want.

**1980s**

Technology makes the home and  
starts to **change behaviors**.

Like teenagers, we  
now have some  
control but don't know  
what to do with it yet.

**1990s**

Technology is here everywhere. A  
great big force. It begins to  
**control us** around the globe.

We are growing up, and  
feeling pretty cool about it.

**2000s**

Technology enables more seamless  
communications across the globe.  
Growth is **explosive**, but the  
"explosion" is **uncontrolled** - it's not  
the plan.

Welcome to adulthood!

**2010s**

Technology becomes **fully integrated**  
into our daily lives. We live more fully in a  
digital world.

*A short history of technology* Thomas K. Derry,Trevor I. Williams,1993 **The Norton History of Technology** Donald Stephen Lowell Cardwell,1994 Humans are tool makers and the first record of humankind is that of their tools Donald Cardwell writes in this absorbing history of technology from prehistory to the present from stone implements the wheel and the first geared machines to the transistor and the supercomputer With a keen eye for the insight that marks a breakthrough in human

problem solving and a wide ranging sympathy for its social and cultural contexts Cardwell chronicles how human curiosity and inventiveness slowly led to the first tools and machines how technological progress accelerated over time as major breakthroughs released floods of further inventions the close links between pure science and technology and the human factors personal and social that help or hinder technological change Casting fresh light on every aspect of technology Cardwell also challenges us to consider such issues as the influence on technology of different religions and cultural practices including a society's level of political freedom the role of market forces the comparative technological advantages of nations as disparate as Japan and the United States and the potential that women hold as the greatest remaining untapped resource for invention and innovation As accessible and engaging as it is informative this book will reward anyone curious about the tools humanity has devised to transform its place in the world

**The Evolution of Technology** George Basalla, 1989-02-24 This book presents an evolutionary theory of technological change based upon recent scholarship in the history of technology and upon relevant material drawn from economic history and anthropology It challenges the popular notion that technology advances by the efforts of a few heroic individuals who produce a series of revolutionary inventions owing little or nothing to the technological past Therefore the book's argument is shaped by analogies taken selectively from the theory of organic evolution and not from the theory and practice of political revolution Three themes appear and reappear with variations throughout the study The first is diversity an acknowledgment of the vast numbers of different kinds of made things artifacts that have long been available to humanity the second is necessity the belief that humans are driven to invent new artifacts in order to meet basic biological requirements such as food shelter and defense and the third is technological evolution an organic analogy that explains both the emergence of novel artifacts and their subsequent selection by society for incorporation into its material life without invoking either biological necessity or technological progress Although the book is not intended to provide a strict chronological account of the development of technology historical examples including many of the major achievements of Western technology the waterwheel the printing press the steam engine automobiles and trucks and the transistor are used extensively to support its theoretical framework The Evolution of Technology will be of interest to all readers seeking to learn how and why technology changes including both students and specialists in the history of technology and science

*The Shock of the Old* David Edgerton, 2011-08-29 In this new history David Edgerton invites us to rethink how technology is used For instance horses contributed more to Nazi conquests than the V2 In influence IKEA founder Ingvar Kamprad matches Bill Gates And corrugated iron is not dead yet
