A History of the Life Sciences Lois N. Magner, 1979 **New Perspectives on the History of Life Sciences and Agriculture** Denise Phillips, Sharon Kingsland, 2015-02-12 This volume explores problems in the history of science at the intersection of life sciences and agriculture from the mid eighteenth to the mid twentieth century Taking a comparative national perspective the book examines agricultural practices in a broad sense including the practices and disciplines devoted to land management forestry soil science and the improvement and management of crops and livestock The life sciences considered include genetics microbiology ecology entomology forestry and deal with US European Russian Japanese Indonesian Chinese contexts The book shows that the investigation of the border zone of life sciences and agriculture raises many interesting questions about how science develops In particular it challenges one to re examine and take seriously the intimate connection between scientific development and the practical goals of managing and improving perhaps even recreating the living world to serve human ends Without close attention to this zone it is not possible to understand the emergence of new disciplines and transformation of old disciplines to evaluate the role and impact of such major figures of science as Humboldt and Mendel or to appreciate how much of the history of modern biology has been driven by national ambitions and imperialist expansion in competition with rival nations

History of the Life Sciences Pieter Smit, 1974 Originated as a plan to produce an extension of those parts of Sarton s Guide to the History of Science that deal with the life sciences Over 4000 entries to international literature primarily monographic published to mid 1971 Entries arranged under broad sections dealing with general reference works historiography of the life and medical sciences during the past and into the 20th century and selected biographical titles Numbered columns Index of personal names

History as a Science and the System of the Sciences Thomas M. Seeböhm, 2015-04-09 This volume goes beyond presently available phenomenological analyses based on the structures and constitution of the lifeworld It shows how the science of history is the mediator between the human and the natural sciences It demonstrates that the distinction between interpretation and explanation does not imply a strict separation of the natural and the human sciences Finally it shows that the natural sciences and technology are inseparable but that technology is one sidedly founded in pre scientific encounters with reality in the lifeworld In positivism the natural sciences are sciences because they offer causal explanations testable in experiments and the humanities are human sciences only if they use methods of the natural sciences For epistemologists following Dilthey the human sciences presuppose interpretation and the human and natural sciences must be separated There is phenomenology interested in psychology and the social sciences that distinguish the natural and the

human sciences but little can be found about the historical human sciences This volume fills the gap by presenting analyses of the material foundations of the understanding of expressions of other persons and of primordial recollections and expectations founding explicit expectations and predictions in the lifeworld Next it shows on the basis of history as applying philological methods in interpretations of sources the role of a universal spatio temporal framework for reconstructions and causal explanations of what has really happened

Dictionary of the History of Science William F. Bynum, Janet Browne, Roy Porter, 2014-07-14 For readers interested in the development of major scientific concepts and the role of science in the western world here is the first conceptually organized historical dictionary of scientific thought The purpose of the dictionary is to illuminate this history by providing a concise single volume reference book of short historical accounts of the important themes ideas and discoveries of science Its conceptual approach differentiates the dictionary from previous reference works such as books of scientific biography and makes it a convenient manual both for the general reader and for scientists interested in the origin of concepts in their own and other scientific fields Originally published in 1982 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

The Past, Present, and Future of Integrated History and Philosophy of Science Emily Herring, Kevin Jones, Konstantin Kiprijanov, Laura Sellers, 2019-05-14 Integrated History and Philosophy of Science iHPS is commonly understood as the study of science from a combined historical and philosophical perspective Yet since its gradual formation as a research field the question of how to suitably integrate both perspectives remains open This volume presents cutting edge research from junior iHPS scholars and in doing so provides a snapshot of current developments within the field explores the connection between iHPS and other academic disciplines and demonstrates some of the topics that are attracting the attention of scholars who will help define the future of iHPS
