## **Lack Of Attention:**

**The Teacher's Attention** Garrett Delavan, 2009-04-27 The Teacher's Attention is a fresh take on relationships in schools. Looking beyond our obsession with raising test scores, this book recognizes that education is a key partner in raising children. Garrett Delavan contends that allowing students, educators, and parents to navigate a smaller number of relationships—a concept he calls relationship load—provides many benefits, including a better chance at achieving equal access to a good education for all children. Delavan shows how class size, school size, and longer-term student-teacher relationships are all equally critical components for educating our children ethically and successfully. After examining these proposed reforms in detail, Delavan also considers counterarguments and provides a detailed projection of costs and savings, putting to rest the assumption that smaller classes and smaller schools are necessarily more expensive. Finally, the book discusses possible steps toward implementation, showing how the author's proposed reforms are remarkably practical. *Encyclopedia of the Mind*

Harold Pashler, 2013-01-14 It's hard to conceive of a topic of more broad and personal interest than the study of the mind. In addition to its traditional investigation by the disciplines of psychology, psychiatry, and neuroscience, the mind has also been a focus of study in the fields of philosophy, economics, anthropology, linguistics, computer science, molecular biology, education, and literature. In all these approaches, there is an almost universal fascination with how the mind works and how it affects our lives and our behavior. Studies of the mind and brain have crossed many exciting thresholds in recent years, and the study of mind now represents a thoroughly cross-disciplinary effort. Researchers from a wide range of disciplines seek answers to such questions as: What is mind? How does it operate? What is consciousness? This encyclopedia brings together scholars from the entire range of mind-related academic disciplines—from across the arts and humanities, social sciences, life sciences, and computer science and engineering—to explore the multidimensional nature of the human mind. *The Handbook of Road Safety Measures*

Rune Elvik, Truls Vaa, Alena Høy, Michael Sørensen, 2009-10-14 Contains summaries of the knowledge regarding the effects of 128 road safety measures. This title covers various areas of road safety, including traffic control, vehicle inspection, driver training, publicity campaigns, police enforcement, and general policy instruments. It also covers topics such as post-accident care and speed cameras. *Proceedings of the 10th International Conference on Science and Technology (ICST 2024)*

Muhammad Akhsin Muflikhun, Tadas Matijošius, Vishnu Vijay Kumar, Gil Nonato C. Santos, 2025-08-01 This is an open access book held as part of the Universitas Gadjah Mada Annual Scientific Conferences (UASC) 2025 series. The 10th International Conference on Science and Technology (ICST) UGM 2025 provides an ideal academic platform for researchers to present the latest research findings and describe emerging technologies and directions in engineering and the natural sciences. *Natural Choices for Attention Deficit Disorder*

Featherstone,2017-11-16 Translating research about child neuroscience into practice in education is a daunting prospect for most practitioners In fact many see it as fraught with difficulties and risky However the importance of this research has never been more important The context of the early years in the UK has seen considerable changes within recent years with a raft of government regulation and guidance and a national move to free childcare entitlement at increasingly earlier ages Combined with a mounting pressure for accountability in Closing the Gap between disadvantaged children and those more fortunate these pressures make it fundamental that those working with young children understand what neuroscience is telling us and more important what it is not Practitioners teachers managers and governors in settings and schools will not only be called to account for the attainment of their children as measured in tests but in the way children are prepared for lifelong learning which will support them for the rest of their school lives and beyond This book is a comprehensive position statement for practitioners that highlights where we are now what we know what we don't know what research developments mean for practitioners and setting and how this fits in with the government expectations within the EYFS framework Sally Featherstone covers the current thinking in educational research and neuroscience how some of this has been misinterpreted by early adopters or over enthusiastic promoters and how new information can help practitioners to be more effective in their work with young children
