history offers environmental historians the opportunity to understand the ways people's perceptions, experiences and beliefs about environments change over time. In turn, the insights of environmental history challenge oral historians to think more critically about the ways an active more than human world shapes experiences and people. The integration of these approaches enables us to more fully and critically understand the ways cultural and individual memory and experience shapes human interactions with the more than human world just as it enables us to identify the ways human memory, identity and experience is moulded by the landscapes and environments in which people live and labour. It includes contributions from Australia, India, the UK, Canada and the USA.

Finding Birds in Mexico, 1968 **Old Men Can't Wait** Simon Gandolfi, 2013-07-05 This epic exploration of thirteen countries takes Gandolfi across desert and over mountains through the Amazon forest and the length of the Appalachians. Guide books may warn of thieves, bandits, corrupt police and border officials. Gandolfi writes of the remarkable kindness and generosity he encounters. Courtesy, patience and good humour are his passports while hurry is his anathema. Whether in village or city, his joy is in leisurely conversation. Gauchos, oil workers, peasant farmers, officials, owners of vast haciendas, Venezuelan revolutionaries, students at Texas A M all excite his curiosity and he faithfully records their opinions while submitting his own thoughts, beliefs and fears to an often merciless inspection. Above all, this is a jubilant chronicle of hope and understanding of new friendships, glorious country, sublime architecture, good food and ultimately an old man's determination to surmount his years. Outrageously irresponsible and undeniably liberating, Gandolfi's travels will fire the imaginations of every traveller, young or old.

Encyclopedia of the World's Coastal Landforms Eric Bird, 2010-02-25 This unique, richly illustrated account of the landforms and geology of the world's coasts, presented in a country-by-country, state-by-state sequence, assembles a vast amount of data and images of an endangered and increasingly populated and developed landform. An international panel of 138 coastal experts provides information on what is where on each sector of coast, together with explanations of the landforms, their evolution and the changes taking place on them. As well as providing details on the coastal features of each country, state or county, the compendium can be used to determine the extent of particular features along the world's coasts and to investigate comparisons and contrasts between various world regions. With more than 1440 color illustrations and photos, it is particularly useful as a source of information prior to researching or just visiting a sector of coast. References are provided to the current literature on coastal evolution and coastline changes.
