Lake Taupo:

Lake Tourism C. Michael Hall, Tuija Härkönen, 2006-05-03 Lakes are an essential element of some of the world's most popular tourism destinations. However, increased pressure from visitors and the tourism industry as well as from other sometimes competing land and water uses has made the sustainable development of lakes increasingly problematic. This book represents the first attempt to bring together some of the key elements of lake tourism within a single volume in order to present the urgent need for an integrated approach to lacustrine tourism systems management. The book presents comprehensive overviews of lake tourism including branding and marketing, visitor management and planning, historical and cultural dimensions and environmental quality. The volume is international in scope with cases from Europe, North America and Oceania. The book concludes by noting that tourism needs to be established as a complementary land and water use at a time when lakes and their watersheds are facing challenges in the form of climate and environmental change, increasing numbers of visitors as well as an overall increase in competing demands for water.

Volcaniclastic Sedimentation in Lacustrine Settings James D. L. White,N. R. Riggs,2009-03-05 This volume presents a unique compendium of papers assessing the effects of volcanism on lakes as recorded by the volcaniclastic sediments deposited within them The unifying theme is that the effects of volcanism on lacustrine sedimentation are diverse and distinctive and that volcaniclastic lacustrine sediments hold the key to understanding a range of processes and events that cannot be readily addressed by the study of any non volcanic lakes Thirteen papers with authors from nine countries examine both modern and ancient eruption affected lacustrine deposits Volcanic eruptions affect lakes and their deposits in many ways and these papers evaluate processes and products of volcanic eruptions within lakes of tectonically impounded lakes strongly influenced by volcanism of eruption impounded lakes and of general factors controlling sedimentation of vitric ash and pumice Tephrastratigraphic studies also take advantage of the exceptional preservation of thin laminae in quiet lakes to precisely date episodes in the evolution of long lived lakes and their catchment areas and to understand how volcanism affects normal lacustrine processes The volume as a whole is an unparalleled source of information on all aspects of the physical sedimentary results of volcanism in lacustrine settings and serves as a complement to other studies concerned primarily with thermal and geochemical characteristics of lakes within volcanic craters If you are a member of the International Association

Wagner,Jerry K. Jacka,2018-06-19 Anthropologists have written a great deal about the coastal adaptations and seafaring traditions of Pacific Islanders but have had much less to say about the significance of rivers for Pacific island culture livelihood and identity The authors of this collection seek to fill that gap in the ethnographic record by drawing attention to the deep historical attachments of island communities to rivers and the ways in which those attachments are changing in response to various forms of economic development and social change In addition to making a unique contribution to Pacific island ethnography the authors of this volume speak to a global set of issues of immense importance to a world in which water scarcity conflict pollution and the degradation of riparian environments afflict growing numbers of people Several authors take a political ecology approach to their topic but the emphasis here is less on hydro politics than on the cultural

meaning of rivers to the communities we describe How has the cultural significance of rivers shifted as a result of colonisation development and nation building How do people whose identities are fundamentally rooted in their relationship to a particular river renegotiate that relationship when the river is dammed to generate hydro power or polluted by mining activities How do blockages in the flow of rivers and underground springs interrupt the intergenerational transmission of local ecological knowledge and hence the ability of local communities to construct collective identities rooted in a sense of place
