Land Supply Monitoring David R. Godschalk, 1986 *Land Supply Monitoring*, 1986 *Monitoring Land Supply with Geographic Information Systems* Anne Vernez Moudon, Michael Hubner, 2000-05-22

Monitoring Land Supply with Geographic Information Systems Theory Practice and Parcel Based Approaches Monitoring the supply of buildable land and its capacity to accommodate growth within urbanizing regions is an increasingly important component of urban planning and growth management Recent developments in Geographic Information Systems GIS have opened up new opportunities for local and regional government to monitor land supply and capacity Based on a study sponsored by the Lincoln Institute of Land Policy this book reviews the state of the art in land monitoring particularly as it benefits from the introduction of GIS data and analysis capabilities at the level of individual land parcels *Monitoring Land Supply with Geographic Information Systems* addresses Technical and methodological frameworks for data collection and analysis as well as applications to a range of policy concerns Case studies of successful land monitoring programs including Portland Oregon Montgomery County Maryland and the Puget Sound Regional Council in Washington Thematic topics ranging from database design to urban simulation modeling to organizational contexts Detailed findings of a national survey of land supply monitoring programs This guide presents a comprehensive timely and critical overview of a fast emerging field of planning and policy analysis It provides an invaluable resource to professionals including land use and economic development planners GIS analysts local government officials and private developers

Managing Community Growth United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Investigations and Oversight, 1994 *Regional Planning* Kanan Chatterjee, 2017-01-01 Region according to the eminent geographers is economically the most gainful administratively the most convenient sectoral and spatial unit where planning is a mere process economic growth is a mere outcome and general welfare is the ultimate goal Whether they were large or small these regions provided the framework for determinist research on the man environment relationship To speak of a region is to understand its past to grasp the attachment to explain its economic political and social functioning in a local and world context it is to address the prospects for its future The regional planner while visualizing the spatial

processes attempt to identify the flows that reflect interdependence among the spatial units in terms of economic activities that bind them. Thus it is possible to identify in the interrelated spatial sub systems one which acts as the dominant over the others. The development of this type of spatial system could be explained in economic terms by factors such as transport cost, economics of scale and agglomeration while the core one emerges as the dominant highest order pole in a hierarchical structure of spatial system. For cities and towns planning issues are of two general kinds. First there is a need to think ahead to accommodate the city's growth, deciding which lands should be built on and when and whether they should be used for residential development for industry or for some more specialized function such as a shopping centre or playing fields. Besides definition, concept, scope, objectives and content of regional planning, basic principles, aspects, planning, development strategies, theories of regional growth and case studies have been emphasized in this study. At present the techniques in relation to R/S and GIS are widely utilized for the delineation of areal units or regions for planning purposes. Various data sets of the area are often used for interpreting and unifying them within GIS and Image Processing environment and analyzing the given data for identifying and delineating the prospective area that may be industrial, agricultural, urban etc within the selected study area. In fact this book identifies many such aspects of development in regional planning which are found to be relevant not only in the present day context but also for the days ahead.
