Schowengerdt,2012-12-02 This book is a completely updated greatly expanded version of the previously successful volume by the author The Second Edition includes new results and data and discusses a unified framework and rationale for designing and evaluating image processing algorithms Written from the viewpoint that image processing supports remote sensing science this book describes physical models for remote sensing phenomenology and sensors and how they contribute to models for remote sensing data The text then presents image processing techniques and interprets them in terms of these models Spectral spatial and geometric models are used to introduce advanced image processing techniques such as hyperspectral image analysis fusion of multisensor images and digital elevationmodel extraction from stereo imagery The material is suited for graduate level engineering physical and natural science courses or practicing remote sensing scientists Each chapter is enhanced by student exercises designed to stimulate an understanding of the material Over 300 figuresare produced specifically for this book and numerous tables provide a rich bibliography of the research literature *Cloud Dynamics* L.T. Matveev,1984-03-31 During recent decades a new field of study in atmospheric science has made its appearance the dynamics of clouds As the name implies the subject matter of cloud dynamics includes the causes of cloud formation and the temporal development of clouds At first effort was concentrated mainly on devising models of the structure and development of convective clouds and thus there exists considerable literature on this 9 69 88 330 411 Although convective clouds are of great significance thunder storm formation and very intense turbulence are associated with these clouds they are observed much less frequently than other cloud types For instance the frequency of occurrence of strati form frontal clouds and wave clouds over the U S S R and Western Europe is more than 90% 2 4 During the last 20 or 30 years there has been considerable success in studying the dynamics of stratiform clouds Fundamental laws equations describing the formation development and dis sipation of these clouds and also of fog have been formulated and also laws describing the formation of humidity and temperature fields in a turbulent medium Hydrodynamic models of clouds and fog constructed on the basis of these equations have made it pos sible to formulate the fundamental regularities in the formation and evolution of large scale cloud fields and also to ascertain the structural features of clouds of various kinds These topics are covered in Chapters 1 4 of this monograph We, the Navigators David Lewis,1994-05-01 This new edition includes a discussion of theories about traditional methods of navigation developed during recent decades the story of the renaissance of star navigation throughout the Pacific and material about navigation systems in Indonesia Siberia and the Indian Ocean Improved Cloud Detection Utilizing Defense Meteorological Satellite Program Near Infrared Measurements James T.
