Soni, The Mother Planet Earth is the only one in our solar system characterized and shaped by abundant liquid water a necessity for life Aquatic ecosystems are diverse habitats endowed with physical chemical and geographical variations in the world where the gradation from highly productive organisms to highly specialized organisms exists Although water characterizes this planet majority of it is saline in nature 97.2% and contained in the world's ocean Only 2.8% is fresh water including 2.05% frozen in glaciers 0.68% as groundwater and only a tiny fraction 0.011% of our water resources is contained in freshwater i.e ponds rivers and lakes This water is available first in the form of surface water through rivers and lakes The river is a prime example of lotic ecosystem It is a wide natural stream of fresh water that flows into an ocean and is usually fed by smaller streams called tributaries that enter it along its course A river and its tributaries form a drainage basin or watershed that collects the run off throughout the region and channels along with erosional sediments toward the river Rivers are described by unidirectional flow continuous state of physical change high degree of spatial and temporal heterogeneity including biotic aquatic plant organisms and plankton as well as abiotic physical and chemical interactions There are 14 major rivers 44

medium rivers and 53 small rivers in India Major rivers have been proved to be the seat for the setup of big cities and their educational political and regional developments The Gujarat State is profusely endowed with a number of perennial rivers such as Narmada Tapi Mahi and Sabarmati The book Pollution Studies of Sabarmati River and Kharicut Canal Ahmedabad Gujarat focuses on environmental ecological and biological studies of two rivers viz Sabarmati River Front and Kharicut Canal Industrial River Central Gujarat India covering abiotic hydrochemical characteristics geochemical characters nutrient budget recycling of nutrients biotic components microbial analysis Total Coliform Faecal Coliform phytoplankton zooplankton eutrophic status and heavy metals in surface water and bottom sediment The book also highlights an in depth study of surface water and bottom sediment quality diversity density abundance commonness rarity of plankton phytoplankton zooplankton including qualitative and quantitative characters diversity indices population dynamics and correlation between abiotic and biotic components The book would indubitably be a standard reference guide for riverine conservationists river managers policy makers and decision makers to prevent the unrestrained exploitation of stream biodiversity destruction of potential riverine habitats and uncontrolled interactions of man and technology with lotic ecosystems of the world
