Hibernation And The Hypothalamus

James H. Austin

Hibernation And The Hypothalamus:

Hibernation and the Hypothalamus Nicholas Mrosovsky, 2012-12-06 Mammalian hibernation is commonly thought of as something completely out of the ordinary a unique and unorthodox state The present book takes the opposite view It argues that the physiological achievements of hibernators do not depend on special mechanisms but on special use of ordinary mechanisms It is precisely this that makes the hibernators important If the hibernators depend on some unique physiological principle their study is that of a biological curio But if they are using basic mammalian systems in a quantitatively extreme way then they are a naturally occurring preparation of enormous potential Hibernation involves every aspect of the animal's biology from fat metabolism to behavior from thermoregulation to dental caries every system in the body is affected in some way or other by hibernation A comprehensive account of hibernation would be almost coextensive with an account of the whole of mammalian biology The present book does not attempt to describe everything that has been discovered about hibernation Excellent coverage for that already exists in the proceedings of three recent symposia and in the other major source materials listed on page 233 There is in fact an enormous amount of information already available But there is a difference between information and understanding Despite the increasing volume of research and growing interest in mammalian hibernation there is little appreciation of the essential characteristics of the phenomena The pieces of the puzzle lie scattered

Hibernation and Torpor in Mammals and Birds Charles P Lyman, 2013-07-10 Hibernation and Torpor in Mammals and Birds explores the physiological factors that control hibernation and torpor in birds and mammals This text covers topics ranging from metabolism in hibernation to the role of endocrines respiration and acid base state in hibernation and theories of hibernation This book is comprised of 14 chapters and begins with an overview of some clear cut definitions and why mammals and birds hibernate The reader is then introduced to the variations from euthermia that have been observed among birds and mammals To give some structure to this listing the approach is phylogenetic starting with the birds and proceeding through the primitive to the more advanced mammals Subsequent chapters explain the process of entering hibernation and the hibernating state itself capability of a species in natural hibernation to arouse from that state using self generated heat physiological changes at the start of a spontaneous arousal and physiological mechanisms underlying the ability of hibernators to rewarm Consideration is also given to intermediary metabolism in hibernation cold adaptation of metabolism in hibernators and the response of hibernators to various extrinsic influences such as neoplastic growth radiation injury and parasitism and symbionts This book will be of interest to students and researchers in fields ranging from zoology to physiology and biophysics

Encyclopedia of Neuroscience, Volume 1 Larry R. Squire, 2009-06-12 The Encyclopedia of the Neuroscience explores all areas of the discipline in its focused entries on a wide variety of topics in neurology neurosurgery psychiatry and other related areas of neuroscience Each article is written by an expert in that specific domain and peer reviewed by the advisory board before acceptance into the encyclopedia Each article contains a

glossary introduction a reference section and cross references to other related encyclopedia articles Written at a level suitable for university undergraduates the breadth and depth of coverage will appeal beyond undergraduates to professionals and academics in related fields

King's Applied Anatomy of the Central Nervous System of Domestic Mammals Geoff Skerritt, 2018-02-05 An update of a classic student text unlocking the mystery of veterinary neurology and neuroanatomy King's Applied Anatomy of the Central Nervous System of Domestic Mammals Second Edition is an ideal introduction for those with no prior knowledge of the central nervous system Presented in a logical and accessible manner readers can quickly comprehend the essential principles of how the central nervous system is constructed the way it works and how to recognise damaged components By blending descriptive anatomy with clinical neurology the text offers a unique approach explaining the structure and function of the central nervous system while highlighting the relevance to clinical practice Revised and updated to cover the latest clinical developments this second edition includes additional content on electrodiagnostic methods stem cell transplantation and advanced imaging The book also comes with a companion website featuring self assessment questions label the diagram exercises and downloadable figures to aid further learning An excellent introductory text for veterinary students King's Applied Anatomy of the Central Nervous System of Domestic Mammals Second Edition is also an invaluable reference for trainee veterinary neurology specialists as well as veterinary practitioners with a particular interest in neurology

Zen and the Brain James H. Austin, 1999-06-04 A neuroscientist and Zen practitioner interweaves the latest research on the brain with his personal narrative of Zen Aldous Huxley called humankind's basic trend toward spiritual growth the perennial philosophy In the view of James Austin the trend implies a perennial psychophysiology because awakening or enlightenment occurs only when the human brain undergoes substantial changes What are the peak experiences of enlightenment How could these states profoundly enhance and yet simplify the workings of the brain Zen and the Brain presents the latest evidence In this book Zen Buddhism becomes the opening wedge for an extraordinarily wide ranging exploration of consciousness In order to understand which brain mechanisms produce Zen states one needs some understanding of the anatomy physiology and chemistry of the brain Austin both a neurologist and a Zen practitioner interweaves the most recent brain research with the personal narrative of his Zen experiences The science is both inclusive and rigorous the Zen sections are clear and evocative Along the way Austin examines such topics as similar states in other disciplines and religions sleep and dreams mental illness consciousness altering drugs and the social consequences of the advanced stage of ongoing enlightenment

Developmental Timing, 2013-08-17 This new volume of Current Topics in Developmental Biology covers developmental timing with contributions from an international board of authors The chapters provide a comprehensive set of reviews covering such topics as the timing of developmental programs in *Drosophila* temporal patterning of neural progenitors and environmental modulation of developmental timing Covers the area of developmental timing International board of authors Provides a comprehensive set of reviews covering such topics as

Advances in Comparative and Environmental Physiology, 2012-12-06 *Advances in Comparative and Environmental Physiology* provides comprehensive integrated reviews giving sound critical and provocative summaries of our present knowledge in environmental and comparative physiology from the molecular to the organismic level The field has now gained the international status it deserves and the organization of a series devoted to it is very timely in view of its actual rapid development Biologists physiologists and biochemists independently of their basic scientific orientation will find this new series of major interest

Contributions to Thermal Physiology Z. Szelényi, M. Székely, 2013-10-22 *Advances in Physiological Sciences* Volume 32 *Contributions to Thermal Physiology* is a collection of papers that details the advances in the understanding of the thermal aspects of physiology The first part of the title presents articles about central nervous control of body temperature while the second part covers papers about fever Next the selection deals with brain cooling along with thermoregulation and sleep The fifth part covers phylogenetic aspects of temperature regulation while the sixth part tackles acclimation Next the selection talks about age related difference in temperature regulation and the peripheral effector mechanisms The text also covers the brown adipose tissue and the relevance of exercise in regulating body temperature The book will be of great interest to students researchers and practitioners of medicine and biology

Metabolism and Behaviour, 1978-09-19 **NASA Technical Translation** United States. National Aeronautics and Space Administration, 1972

The Integrative Physiology of Metabolic Downstates Alessandro Silvani, 2021-11-02

NIDA Research Monograph, 1976 *Hormones and Brain Plasticity* Luis Miguel Garcia-Segura, 2009-05-05 The nervous system has a remarkable capacity for self reorganization and in this first systematic analysis of the interaction between hormones and brain plasticity Luis Miguel Garcia Segura proposes that hormones modulate metaplasticity in the brain He covers a wide variety of hormones brain regions and neuroplastic events and also provides a new theoretical background with which to interpret the interaction of hormones and brain remodeling throughout the entire life of the organism Garcia Segura argues that hormones are indispensable for adequately adapting the endogenous neuroplastic activity of the brain to the incessant modifications in external and internal environments Their regulation of neuroplastic events in a given moment predetermines new neuroplastic responses that will occur in the future adapting brain reorganization to changing physiological and behavioral demands throughout the life of the organism The cross regulation of brain plasticity and hormones integrates information originated in multiple endocrine glands and body organs with information coming from the external world in conjunction with the previous history of the organism Multiple hormonal signals act in concert to regulate the generation of morphological and functional changes in neural cells as well as the replacement of neurons glial and endothelial cells in neural networks Brain remodeling in turn is involved in controlling the activity of the endocrine glands and regulating hormonal secretions This bidirectional adjustment of brain plasticity in

response to hormonal inputs and adjustment of hormonal concentrations in response to neuroplastic events are crucial for maintaining the stability of the inner milieu and for the generation of adequate behavioral responses in anticipation of and in adaptation to new social and environmental circumstances and life events including pathological conditions

The Neural Basis of Behavior A.L. Beckman, 2012-12-06 The Symposium on the Neural Basis of Behavior from which this volume was produced was held at the Alfred I duPont Institute on June 7 and 8 1979 It brought outstanding investigators in four fundamental areas of behavioral neurobiology into juxtaposition there to provide an integrated multidisciplinary perspective on behaviorally significant brain mechanisms Particular emphasis was placed on topics of interest to neurobiologists as well as to clinicians in neurological and psychiatric disciplines The session on central activity states was selected as an appropriate point of departure because the continuum of brain activity states extending from the natural depression of hibernation through the heightened levels of arousal accompanying learning is such a clear and basic determinant of behavioral output The papers on learning and memory outlined diverse approaches to understanding the basis of these interrelated CNS capabilities that constitute the neural basis of behavioral adaptation Finally the topics of affective states and mechanisms of pain provided a focus of clinically relevant discussion covering multiple levels of functional and anatomical CNS organization The success of the symposium bore testimony to the excellence of the presentations and to the symbiosis of their content both are preserved herein The support and encouragement of Dr G Dean MacEwen Medical Director of the Alfred I duPont Institute is gratefully acknowledged Alexander L Beckman Wilmington July 1979 The Neural Basis of Behavior PART I Central Activity States Copyright 1982 Spectrum Publications Inc

HIBERNATION & THE HYPOTHALAMUS. 1971 N. MROSOVSKY, *Thermotherapy for Neoplasia, Inflammation, and Pain* M. Kosaka, T. Sugahara, K.L. Schmidt, E. Simon, 2013-04-17 This book provides a comprehensive overview of the multitude of different forms of thermotherapy in connection with aspects of thermal physiology and cell biology The aim is to elucidate the scientific background of therapeutic actions and to promote effective new applications at the beginning of the 21st century Significant to these purposes is cooperation between experts in the fields of thermal biology hyperthermic oncology rheumatology and balneology as represented by the editors Emphasis has been placed on a balanced choice of contributions in the hope that this will enable the reader to draw helpful connections between the principles and practice of thermotherapy It is apparent that a wealth of published data exists concerning thermotherapy on the one hand and thermal physiology on the other However in the former field empirical aspects of therapeutic usefulness prevail while in the latter aspects of basic science are in the foreground Accordingly the sources where published data may be found are quite different and as a consequence many findings of potential mutual interest published in medical journals have gone unnoticed by readers of physiological journals and vice versa It is hoped that this book will bridge the gap and encourage researchers efforts to integrate the available knowledge to attain optimal coordination of clinical and theoretical aspects

Neurobiology of Monotremes Ken

Ashwell,2013-12-01 Neurobiology of Monotremes brings together current information on the development structure function and behavioural ecology of the monotremes The monotremes are an unusual and evolutionarily important group of mammals showing striking behavioural and physiological adaptations to their niches They are the only mammals exhibiting electroreception in the trigeminal sensory pathways and the echidna shows distinctive olfactory specialisations The authors aim to close the current gap in knowledge between the genes and developmental biology of monotremes on the one hand and the adult structure function and ecology of monotremes on the other They explore how the sequence embryonic structure adult structure behaviour is achieved in monotremes and how this differs from other mammals The work also combines a detailed review of the neurobiology of monotremes with photographic and diagrammatic atlases of the sectioned adult brains and peripheral nervous system of the short beaked echidna and platypus Pairing of a detailed review of the field with the first published brain atlases of two of the three living monotremes will allow the reader to immediately relate key points in the text to features in the atlases and will extend a universal system of brain nomenclature developed in eutherian brain atlases by G Paxinos and colleagues to monotremes *Life In The Cold* Cynthia Carey,Gregory L. Florant,Bruce A. Wunder,Barbara Horwitz,2019-03-13 Contributors present the newest information on ecological physiological neurological cellular and biochemical mechanisms by which vertebrates deal with seasonal cold *Introductory Biology* Philip Weinstein,1995 Quicksmart introductory biology University Guides Quicksmart **Model Animals in Neuroendocrinology** Mike Ludwig,Gil Levkowitz,2018-08-30 Model Animals in Neuroendocrinology From Worm to Mouse to Man offers a masterclass on the opportunities that different model animals offer to the basic understanding of neuroendocrine functions and mechanisms of action and the implications of this understanding The authors review recent advances in the field emanating from studies involving a variety of animal models molecular genetics imaging technologies and behavior assays These studies helped unravel mechanisms underlying the development and function of neuroendocrine systems The book highlights how studies in a variety of model animals including invertebrates fish birds rodents and mammals has contributed to our understanding of neuroendocrinology Model Animals in Neuroendocrinology provides students scientists and practitioners with a contemporary account of what can be learnt about the functions of neuroendocrine systems from studies across animal taxonomy This is the seventh volume in the Masterclass in Neuroendocrinology Series a co publication between Wiley and the INF International Neuroendocrine Federation that aims to illustrate highest standards and encourage the use of the latest technologies in basic and clinical research and hopes to provide inspiration for further exploration into the exciting field of neuroendocrinology
