The Neural Mind George Lakoff, Srini Narayanan, 2025-06-24 Offers an expansive unified theory of thought that brings together the vast resources of neuroscience computation and cognitive linguistics What is an idea and where does it come from We experience thought as if it were abstract but every thought is actually a physical thing carried out by the neural systems of our brains Thought does not occur neuron by neuron it happens when neurons come together to form circuits and when simple circuits combine to form complex ones Thoughts then derive their structures from the circuitry we also use for vision touch and hearing This circuitry is what allows simple thoughts to come together into complex concepts making meaning creating metaphors and framing our social and political ideas With *The Neural Mind* George Lakoff a pioneering cognitive linguist and computer scientist Srini Narayanan deftly combine insights from cognitive science computational modeling and linguistics to show how thoughts arise from the neural circuitry that runs throughout our bodies They answer key questions about the ways we make meaning How does neural circuitry create the conceptual frames through which we understand our social lives What kind of neural circuitry characterizes metaphorical thought in which ideas are understood in terms of other ideas with similar structures Lively and accessible the book shows convincingly that the metaphors we live by to use Lakoff's famous phrase aren't abstractions but deeply embodied neural constructs *The Neural Mind* is the first book of its kind bringing together the ideas of multiple disciplines to offer a unified accessible theory of thought A field defining work Lakoff and Narayanan's book will be of interest not just to linguists and cognitive scientists but also to psychologists philosophers anthropologists journalists sociologists and political scientists and anyone who wants to understand how we really think

The Clause in English Peter Collins, David A. Lee, 1999 The focus in this volume is on grammatical aspects of the clause in English presenting a fine balance between theoretically and descriptively oriented approaches Some authors investigate the status and properties of minor or fringe constructions including deictic presentationals non restrictive relative clauses with that isolated if clauses and exceptional clauses In some articles the validity of conventional accounts and approaches is questioned such as traditional constituency trees and labelled bracketings as a means of representing relationships between parenthetical elements and their hosts or traditional morphophonemic analyses as explanations for Ross's doubling constraint While some authors question commonly made assumptions for example those concerning the relationships of clauses to sentences and propositions or those concerning the status of post head dependents in the NP others appeal to new frameworks for instance emergence theory is used as a source of inspiration in dealing with intransitive prepositions This collection also includes articles that adopt a solidly corpus based approach *The Clause in English* has been prepared by colleagues past and present friends and admirers of Rodney Huddleston in order to honour his consistently outstanding contribution to grammatical theory and description
