## Hi Clouds:

**Hi, Clouds** Carol Greene, 1983 Two children watch clouds become fat and thin white and gray then turn into dogs sheep dragons and castles *High-Velocity Clouds* Hugo van Woerden, Bart Wakker, Ulrich Schwarz, Klaas de Boer, 2006-01-28 On the occasion of the retirement of Ulrich Schwarz a symposium was held in Groningen in May of 1996 celebrating his contributions to the study of the interstellar medium including his work on the high velocity clouds The coming together of many specialists in the latter field prompted the idea of compiling a book containing their contributions and summarizing the status of our understanding of the high velocity cloud phenomenon This seemed especially worthwhile at the time since many exciting developments were taking place After the discovery of some H I clouds with high velocities about 40 years ago the subject had been dominated by 21 cm observations of H I emission Starting in the mid 1980s much progress was being made because of the availability of new instruments such as large ground based optical telescopes and UV observatories in space The connections between the work on high velocity clouds and other studies of the properties of the hot interstellar medium also became clearer **Reprints - National Radio Astronomy Observatory, Green Bank, W. Va** National Radio Astronomy Observatory (U.S.), 1973 *Astronomy and Astrophysics Abstracts* S. Böhme, W. Fricke, H. Hefele, I. Heinrich, W. Hofmann, D. Krahn, V. R. Matas, L. D. Schmadel, G. Zech, 2013-12-14 *Astronomy and Astrophysics Abstracts* which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 *Astronomy and Astrophysics Abstracts* aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 31 contains literature published in 1982 and received before July 15 1982 some older literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J Bouska Prague who surveyed journals and publications in Czech and supplied us with abstracts in English The Magellanic Clouds Bengt E. Westerlund, 1997-02-27 The first book to provide a synthesised and comprehensive account of the Magellanic Clouds *Physical Processes in the Interstellar Medium* Lyman Spitzer, Jr., 2008-11-20 *Physical Processes in the Interstellar Medium* discusses the nature of interstellar matter with a strong emphasis on basic physical principles and summarizes the present state of knowledge about the interstellar medium by providing the latest observational data Physics and chemistry of the interstellar medium are treated with frequent references to observational results The overall equilibrium and dynamical state of the interstellar gas are described with discussions of explosions produced by star birth

and star death and the initial phases of cloud collapse leading to star formation

*From Observations to Self-Consistent Modelling of the ISM in Galaxies* Miguel A. de Avillez, Dieter Breitschwerdt, 2012-12-06 Research of the interstellar medium ISM has been advancing rapidly during the last 10 years mainly due to immensely improved observational facilities and techniques in all wavelength ranges We are now able to investigate the ISM in external galaxies and even the intergalactic and intracluster medium in great detail Increased spatial and spectral resolution have provided us with a great deal of information on the interstellar gas in its various phases the magnetic field and the cosmic rays and of course also the stellar component which is the driving agent of the interstellar matter cycle Since only fairly recently a sufficient amount of computing power has become available to tackle these problems with some prospect of obtaining a self consistent picture of the ISM a major goal of this workshop was to bring together observers and theoreticians sufficiently close so that intense discussions about the necessities and desiderata of modelling the ISM could be stimulated Observers have shown in great detail on this conference of what is seen on all scales of the ISM near and far and what boundary conditions would be appropriate for realistic models and theoreticians pointed out what assumptions and simplifications their codes need and how future observations could test their models As a first step towards this goal some self consistent numerical simulations with a minimum number of relevant physical processes were also presented on this meeting There was wide agreement that this approach to keep observers and theoreticians in close contact and also in sometimes quite controversial discussions will bear fruitful results in the near future

**Building Galaxies: From The Primordial Universe To The Present, Procs Of The Xixth Rencontres De Moriond** Veronique Cayatte, Bruno Guiderdoni, Francois Hammer, Trinh Xuan Thuan, J Tran Thanh Van, 2000-07-17 These proceedings provide a summary of the state of the art in the understanding of physical processes which control galaxy formation Many topics are discussed which present the latest observational results dust extinction the role of AGNs in the formation of massive galaxies etc How future instruments such as NGST ALMA FIRST KMT and SKAI can help to resolve these questions is also addressed The book will serve as a useful reference in the field for many years to come

Nuclear Science Abstracts, 1975

**Literature 1971, Part 2** S. Böhme, W. Fricke, U. Güntzel-Lingner, F. Henn, D. Krahn, U. Scheffer, G. Zech, 2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 6 contains literature published in 1971

and received before March 15 1972 some older literature which was received late and which is not recorded in earlier volumes is also included      **Physics and Chemistry of the Solar System** John S. Lewis, 1997 This book is aimed at several distinct audiences first the upper division science major who wants an up to date appreciation of the present state of the planetary sciences for cultural purposes second the first year graduate student from any of several undergraduate disciplines who intends to take graduate courses in specialized areas of planetary sciences and third the practicing Ph D scientist with training in physics chemistry geology astronomy meteorology biology etc who has a highly specialized knowledge of some portion of this material but has not had the opportunity to study the broad context within which that specialty might be applied to current problems in this field      **Physical Processes in Fragmentation and Star Formation** Roberto Capuzzo-Dolcetta, C. Chiosi, Alberto Di Fazio, 2012-12-06 Recent years have witnessed the expansion and multiplication of the observations of star formation and fragmentation accompanied by a consequent growth in the study of the underlying physical processes the chemistry the sites the times etc Moreover recent studies have shown that the formation of stars is likely to share many features with the formation of other self gravitating objects The present volume therefore discusses the formation of such objects in a systematic and comparative manner      **Galaxy Interactions at Low and High Redshift** J.E. Barnes, D.B. Sanders, 2012-12-06 The 186th IAU Symposium came at an exciting and perhaps even historic time for extragalactic astronomy New spacecraft observations plumbed the depths of the Universe out to redshifts of five while revealing astounding details of nearby galaxies and AGN at intermediate redshifts Theoretical ideas on structure formation together with results from detailed numerical modeling created a comprehensive framework for modeling the formation of galaxies and the transformation of galaxies by interactions and mergers All these strands came together at the Symposium as participants glimpsed a developing synthesis highlighting galactic encounters and their role in the history of the Universe This volume offers professional astronomers including PhD students an overview of the rapidly advancing subject of galaxy interactions at low and high redshifts      **The Physics of Interstellar Dust** Endrik Krugel, 2002-12-02 Interstellar dust grains catalyze chemical reactions absorb scatter polarize and re radiate starlight and constitute the building blocks for the formation of planets Understanding this interstellar component is therefore of primary importance in many areas of astronomy astrophysics For example observers need to understand how dust effects light      **Physics of the Galaxy and Interstellar Matter** Helmut Scheffler, Hans Elsässer, 2012-12-06 The present book is a translation of the original German edition published in 1982 with some minor corrections and improvements The guide to supplementary and advanced literature given in the Appendix however has been brought up to date This book is addressed primarily to students taking astronomy as a principal or subsidiary subject and to scientists of related fields but amateur astronomers should also be able to profit from it For most chapters an elementary knowledge of mathematics and physics will be sufficient however Chaps 5 and 6 impose somewhat greater requirements In addition the reader should already be acquainted with the basic

concepts of stellar physics as treated in introductory books including the spectral types the system of stellar magnitudes and colours absolute magnitudes and luminosities the Hertzsprung Russell diagram and its interpretation A modern textbook should use SI units On the other hand the use of the cgs system is still the prevailing custom in astrophysics together with the special units of astronomy length is quoted in parsecs pc mass in solar masses  $M_{\odot}$  and time in years As we have therefore compromised and employed both cgs and SI units in this book whichever was the appropriate choice in each instance A table for conversion of cgs units into SI units and vice versa is given in the Appendix

**Asteroids to Quasars** Phyllis M. Luger, 2004-12-16 Twenty three researchers give insightful snapshots of current progress in a wide variety of topics of astrophysical interest including the nature of asteroid surfaces interstellar gas stars and star formation hot gas in galaxies and quasar variability The reviews are at a level accessible to graduate students working in astronomy and will be useful summaries of many important research areas *Literature 1981, Part 1* Siegfried Böhme, Professor Dr. Walter Fricke, Inge Heinrich, Wilfried Hofmann, Dietlinde Krahn, Dorothea Rosa, Dr. Lutz D. Schmadel, Gert Zech, 2013-11-11 Probing Galaxies Through Quasar Absorption Lines (IAU C199) International Astronomical Union. Colloquium, 2005-12 Review of recent research in the field of quasar absorption line systems **Scientific and Technical Aerospace Reports**, 1992

*Shock-Cloud Interaction in RX J1713.7-3946* Hidetoshi Sano, 2016-11-14 This book presents a study of the young supernova remnant RX J1713.7-3946 in order to reveal the origin of cosmic rays in our galaxy The study focuses on the X ray and gamma radiation from the cosmic ray electrons and protons in the supernova remnant as well as the emission from the surrounding interstellar gas measured by the NANTEN2 4 m radio telescope at Nagoya University The gamma rays show a good spatial correspondence with the interstellar gas which for the first time provides strong evidence of the acceleration of cosmic ray protons Additionally the author determines that an interaction between the supernova shockwaves and interstellar gas referred to as shock cloud interaction promotes the efficient acceleration of cosmic ray electrons in the supernova remnant The book reveals that the interstellar gas plays an essential role in producing the high energy radiation and cosmic rays offering vital new insights into the origin and behavior of galactic cosmic rays
