Heredity Environment And Personality:

Heredity, Environment, and Personality John C. Loehlin, Robert C. Nichols, 2014-11-06 This volume reports on a study of 850 pairs of twins who were tested to determine the influence of heredity and environment on individual differences in personality ability and interests It presents the background research design and procedures of the study a complete tabulation of the test results and the authors extensive analysis of their findings Based on one of the largest studies of twin behavior conducted in the twentieth century the book challenges a number of traditional beliefs about genetic and environmental contributions to personality development The subjects were chosen from participants in the National Merit Scholarship Qualifying Test of 1962 and were mailed a battery of personality and interest questionnaires In addition parents of the twins were sent questionnaires asking about the twins early experiences A similar sample of nontwin students who had taken the merit exam provided a comparison group The questions investigated included how twins are similar to or different from nontwins how identical twins are similar to or different from fraternal twins how the personalities and interests of twins reflect genetic factors how the personalities and interests of twins reflect early environmental factors and what implications these questions have for the general issue of how heredity and environment influence the development of psychological characteristics In attempting to answer these questions the authors shed light on the importance of both genes and environment and form the basis for different approaches in behavior genetic research

Heredity and Environment in 300 Adoptive Families Joseph Horn, 2017-09-08 This book presents the results of a thirty five year research project involving 300 families each of whom adopted at least one child at birth from a Texas home for unwed mothers during the period of 1962-1970 The book weaves together information about the birth parents of the adopted children information about the adoptive parents and information about the children in these families Children adopted at birth have two sets of parents Birth parents provide their adopted away child with a genetic endowment but do not participate in shaping the child's environment Adoptive parents do not contribute genetically but are otherwise in charge of directing the child's development If adopted children grow up to resemble birth parents they have never seen the clear inference is that hereditary factors have had an influence Environmental factors are implicated whenever children resemble their adoptive parents but not the birth parents The Texas Adoption Project was designed to investigate the impact of genetic and environmental factors This unique and innovative longitudinal study is written for specialists and the educated public An introductory guide is provided for the non specialist reader explaining the form and statistical content of the tables Additional technical material for specialists is contained in appendices This important contribution to the literature on adoption will also be of interest to those interested in the relative weight of genetics and environment in human development

Handbook of Behavior Genetics Yong-Kyu Kim, 2009-03-25 Behavior Genetics is an interdisciplinary area combining behavioral sciences and genetics The study of behavior genetics has become increasingly important as we see growth spurts in finding genes involved in complex behaviors following on advances in molecular genetic techniques This domain has now become a vast common ground for scientists from very diverse fields including psychology psychiatry neurology endocrinology biochemistry neuroimaging and genetics However there are not many textbooks or references to which students in behavior genetics can access for their research and class The purpose of this handbook is to offer research guides to the studies of genetic and environmental influences on a variety of complex behaviors in humans and animals Unlike previous behavior genetics textbooks this handbook will discuss current research and topics of interest to psychologists psychiatrists and geneticists Utilizing methodologies and theories commonly used in behavior genetics each chapter will begin with an overview of the selected topic current research and issues will be intensively reviewed and we will direct future research on the topic at the end of the chapter So the handbook will integrate many of the basic issues of the Behavior Genetics and will enhance our understanding in many fields Therefore this handbook will provide future research endeavors for the next 10 years Throughout this handbook the editor will collaborate with contributors who are internationally well known in the field The Behavior Genetics Association members and the Behavior Genetics Editorial Advisory Board will be invited to review the manuscripts of this handbook

Intelligence,

Heredity and Environment Robert J. Sternberg, Elena L. Grigorenko, 1997-01-28 The debate over nature versus nurture in relation to intelligence is not as clearly drawn as it was ten years ago when geneticists claimed that intelligence is innate while environmentalists claimed that culture is the major determining factor Although the debate has not been resolved it has been significantly refined Robert Sternberg and Elena Grigorenko address the roles and interaction of nature and nurture in Intelligence Heredity and Environment This book provides a comprehensive balanced current survey of theory and research on the origins and transmission of human intelligence The book is unique in the diversity of viewpoints it presents and its inclusion of the very most recent theories and findings It highlights the search for genes associated with specific cognitive abilities interactionist theories cultural relativism educational strategies developmental perspectives and fallacies of previous intelligence research

The Behavioral Genetics of Psychopathology Kerry L. Jang, 2005-03-23 New discoveries about the genetic underpinnings of many kinds of human experience are now continually being made This book explores the impact of these discoveries on the ways in which the common mental disorders are best conceptualized and treated Most people think of research in genetics as the search for genes This is only one focus of effort and even with the reliable identification of susceptibility genes the clinical applications of their discovery such as gene therapies and new drug development are a long way off For the present the impact of genetic research on our understanding of mental illness is tied to our ability to estimate the effect of all genes by means of family twin and adoption studies The results of these studies challenge some deeply cherished ideas and theories and support others Of course the effect of genes is only half the equation The role of experience environment and living conditions accounts for as much often considerably more of the variability in psychopathology In this book Kerry Jang attempts not to answer questions about what is genetic and what is not but about what a knowledge of the relative influence of genes versus environment means at a psychological level of analysis to show how it changes common assumptions about classification etiology diagnosis and intervention He first offers an overview of contemporary behavioral genetics dispels common misconceptions responds to the criticisms that have been leveled at this new field and describes in basic terms how genetic and environmental effects are estimated and how susceptibility genes are pinpointed He then points to new directions in which standard nosological systems are likely to evolve as new information about vulnerabilities and covariances emerges Finally he synthesizes and evaluates the consistency of the last decade's findings for the most common categories of psychopathology that have been studied by behavior geneticists mood personality and anxiety disorders substance abuse and schizophrenia and the psychotic disorders Clinicians and researchers alike need to understand the genetic influences on the feelings and behaviors they are seeking to change or study if they are to be effective in their work The Behavioral Genetics of Psychopathology A Clinical Guide empowers them with this understanding

Siblings E. Mavis Hetherington,David Reiss,Robert Plomin,2013-05-13 One of the most notable findings in contemporary behavior genetics is that children growing up in the same family are not very comparable Findings suggest that in order to understand individual differences between siblings it is necessary to examine not only the shared experiences but also the differences in experiences of children growing up in the same family In the past decade a group of investigators has begun to examine the contributions of genetics and both shared and nonshared environment to development As with many new research endeavors this has proven to be a difficult task with much controversy and disagreement not only about the most appropriate models and methods of analysis to be used but also about the interpretation of findings Written by some of the foremost scholars working in the area on nonshared environment the papers in this book present their perspectives concerns strategies and research findings dealing with the impact of nonshared environment on individual differences in the development of siblings This volume will have heuristic value in stimulating researchers to think in new ways about the interactions between heredity shared and nonshared environment and the challenges in identifying their contributions to sibling differences These papers should raise new questions about how to examine the contributions of genetic and environmental factors to development with consideration given to the findings of this study of sibling differences and nonshared environment Further these papers may encourage a growing trend to integrate genetic and environmental perspectives in studies of development **Psychiatric Genetics and Genomics** Peter McGuffin,Michael J Owen,Irving I Gottesman,2004-09-23 Geneticists and will be essential reading for psychiatrists and geneticists and will be of interest to neurologists psychologists and neuroscientists Medical Bulletin ,1929
