Heredity Factor:

Hereditary Factors in Carcinoma Henry T. Lynch, 2012-12-06 The writing of this monograph was stimulated on the one hand by experience gained in the study of cancer families and on the other by the frequent perplexed and bewildered comments made by numerous physicians who have expressed amazement that we could think that cancer is hereditary In reviewing the world literature it became immediately apparent that no compendium on the subject of cancer genetics was available to the physician or research scientist Therefore this monograph has been written for the following reasons 1 To illuminate the problem for those who may have missed or ignored the evidence supporting a genetic etiology for certain malignant neoplasms 2 to supply useful information to all practicing physicians regarding genetic risks to their patients and 3 to provide new thoughts on the subject for use by cancer investigators Finally our paramount hope is that information gleaned through the reading of this monograph may contribute to the early diagnosis of cancer in members of high risk cancer families

na , The Heredity of Behavior Disorders in Adults and Children D.L. Pauls, S.M. Singer, S.G. Vandenberg, 2012-12-06 Current trends in morbidity suggest that by the beginning of the twenty first century psychiatric illness may become the most pressing problem in public health in many of the advanced countries As ably demonstrated by Vandenberg Singer and Pauls the principal identifiable etiology of the major psychiatric disorders is heredity if progress is to be made in prevention and treatment of these disorders it may have to come from improved understanding of their inheritance A relentless increase has been observed in the frequency of mood disorders primarily major depression but also manic depressive illness appearing earlier and more frequently in each age cohort born since approximately 1940 Because major depression is a recurrent disorder whose episodes increase in frequency with age the number of observed depressions can be expected to increase dramatically as these people reach middle and old age The rate of suicide has also increased enormously according to birth cohort Starting with people born around 1935 the rate of suicide between 15 and 19 years of age has increased more than 10 times from the earliest to the most recent birth cohorts What is not clear is if there will be a compensatory reduction in suicide rate as this cohort ages because people likely to commit suicide will have done so earlier or if this presages a general increase in suicide comparable to the increase in mood disorders and perhaps a function of them

Heredity and Environment in the Functional Psychoses Einar Kringlen, 2013-10-22 Heredity and Environment in the Functional Psychoses involves an epidemiological clinical study of twins carried out at the University Psychiatric Institute in Oslo The author reviews the history and nosological aspects of psychiatry In his study of twin genetics

the author seeks to answer the questions What is inherited and How is it inherited In his review of 342 pairs of twins in the Central Register of Psychosis his study had the following aims to obtain true concordance figures for all types of functional psychoses to study problems pertaining to nosology and to study a larger sample of discordant pairs in order to clarify crucial environmental factors His findings show that concordance figures for schizophrenia are 25.38 per cent in monozygotic twins and 4.10 per cent in dizygotic twins He points out that the difference in such concordance rates between the two types of twins is statistically significant The data supports the weak assumption of a genetic factor in the etiology of schizophrenia Behavioral scientists psychiatrists child psychologists and researchers involved in genetics will find this book helpful and informative

Lochhead, 2013-04-18 A scientific guide to how heredity and genetics are intertwined Written by the once Professor of biology at McGill University W Lochhead Written with style and separated into easy to handle sections Many of the earliest books particularly those dating back to the 1900s and before are now extremely scarce and increasingly expensive We are republishing these classic works in affordable high quality modern editions using the original text and artwork [Our Present Knowledge of Heredity](#), 1925 [Bulletin](#), 1922 **Methodology for Genetic**

Hebb, 2014-03-18 Donald Olding Hebb referred to by American Psychologist as one of the 20th century's most eminent and influential theorists in the realm of brain function and behavior contributes greatly to the understanding of mind and thought in *Essays on Mind* His objective was to learn about thought which he considered the central problem of psychology but also not less important to learn how to think clearly about thought which is philosophy The volume is written for advanced undergraduates graduates professionals and lay people interested in or studying the mind Hebb offers an increased understanding of the mind from a biological perspective that affects long standing philosophical and psychological problems Psychology and Philosophy were divorced some time ago but like other divorced couples they still have problems in common writes Hebb The first three chapters establish the methodological and philosophical basis for his biologically centered theory of behavior including the evolution of the mind nature versus nurture the origination and status of cell assembly theory and infant thought and language

development He concludes with a discussion of the workings of scientific thought from a practical rather than theoretical perspective **Eugenical News**, 1929 **The Mental Health of the Child** National Institute of Mental Health (U.S.). Program Analysis and Evaluation Branch, 1971 **The Heredity Hoax** Richard M. Lerner, Gary Greenberg, 2025-01-30 This innovative and thought provoking book integrates both new authored material and reprints of existing literature that together provide a compelling narrative that reveals the fatally flawed science associated with genetic reductionist accounts of human behavior and development Through an interdisciplinary lens it illuminates the dynamic nature of human development empowering readers to question established notions and embrace the complexity of our potential Across the book the work of top tier scientists from developmental comparative educational and biological science illuminates theory and research converging on the conclusion that the multiple egregiously flawed work of genetic reductionists should be expunged from research pertinent to human development The book challenges the prevailing reductionist narratives and their application to social policies programs and uses in media Theoretically based and empirically rigorous this multidisciplinary approach to human development will shine a light on the inequities in individuals or groups that suggest that specific genes do not enable them to succeed in life The Heredity Hoax invites graduate programs and advanced undergraduate courses on human development human potential epigenetics and more to delve into the intricate interplay between genes environment and personal growth This will also serve as an unimpeachable source of evidence for researchers educators and social policymakers Application of Intelligent Systems in Multi-modal Information Analytics Vijayan Sugumaran, A.
