The Government Role in Civilian Technology Institute of Medicine, National Academy of Engineering, National Academy of Sciences, Committee on Science, Engineering, and Public Policy, Panel on the Government Role in Civilian Technology, 1992-02-01 As U S industry faces worldwide challenges policymakers are asking questions about the role of the federal government not only in promoting basic research but also in ushering new innovations to the marketplace This book offers an expert consensus on how government and industry together can respond to the new realities of a global marketplace The volume offers firm conclusions about policy and organizational changes with the greatest potential to improve our technological competitiveness and presents three alternative approaches for a new federal role The volume examines How federal involvement in technology development affects the nation s economic well being What we can learn from past federal efforts to stimulate civilian technology development in the United States and among our major industrial competitors How trends in productivity R D and other key areas have affected U S performance and how we compare to the world s rising industrial economies Offering guidance on one of the 1990s most important issues this volume will be indispensable to federal policymakers executives in industry and technology and researchers

The Government Role in Civilian Technology, 1992 *Government-Industry Partnerships for the Development of New Technologies* National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, 2003-01-01 This report reviews a variety of partnership programs in the United States and finds that partnerships constitute a vital positive element of public policy helping to address major challenges and opportunities at the nexus of science technology and economic growth

Foreign Participation in U.S. Research and Development National Academy of Engineering, Committee on Foreign Participation in U.S. Research and Development, 1996-06-05 During the past decade foreign participation in U S research and

development through acquisition of R D intensive businesses links with universities and other arrangements has expanded rapidly This emergence of foreign influence has drawn a mixed response some regard the trend as a positive corollary to the expanding involvement of U S owned companies in national markets abroad Others consider it a net liability for Americans that often benefits foreign companies and their home economies at U S expense There exists a large gap in expert and public understanding of the drivers nature and consequences of foreign participation in the nation s technology enterprise This volume seeks to close this gap and reviews The nature of R D activities and how they contribute to economic development The causes scope and nature of foreign involvement in U S based R D activity and the associated costs risks benefits and opportunities of this trend The merits and liabilities of policies to regulate foreign R D participation **Organisational**

Feldman,Albert N. Link,2012-12-06 Scholars in

the science and technology field have not collectively questioned much less proposed an agenda for policy makers Now is an appropriate time for such an undertaking First there is a growing belief that the U S national research and development system like that of many industrial nations is changing due to global competitive pressures and advancements in information technology and electronic commerce Second industry s R D relationship with the academic research community is changing

not only because of the global competition but also because of alterations in the level of government support of fundamental research. As a result, policy makers will need to rethink their approaches to science and technology issues. This volume is a collection of essays by scholars about innovative policy in the knowledge based economy. By knowledge based economy we mean one for which economic growth is based on the creation, distribution and use of technology. As such, innovation policy in such an economy must enhance the creation, distribution and use of knowledge that leads to the creation, distribution and use of technology. This volume considers elements of an innovation policy, innovation policy and academic research, innovation policy in electronic commerce and innovation policy and globalization issues.

National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Capitalizing on Science, Technology, and Innovation: An Assessment of the Small Business Innovation Research Program--Phase II, 2014-09-30. Created in 1982 through the Small Business Innovation Development Act, the Small Business Innovation Research SBIR program remains the nation's single largest innovation program for small business. The SBIR program offers competitive awards to support the development and commercialization of innovative technologies by small private sector businesses. At the same time, the program provides government agencies with technical and scientific solutions that address their different missions. SBIR at the Department of Defense considers ways that the Department of Defense SBIR program could work better in addressing the congressional objectives for the SBIR program to stimulate technological innovation, use small businesses to meet federal research and development R D needs, foster and encourage the participation of socially and economically disadvantaged small businesses, and increase the private sector commercialization of innovations derived from federal R D. An earlier report, An Assessment of the Small Business Innovation Research Program at the Department of Defense, studied how the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs. This report builds on the previous one with a revised survey of SBIR companies. SBIR at the Department of Defense revisits some case studies from the 2009 study and develops new ones and interviews agency managers and other stakeholders to provide a second snapshot of the program's progress toward achieving its legislative goals.

SBIR/STTR at the Department of Energy National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Capitalizing on Science, Technology, and Innovation: An Assessment of the Small Business Innovation Research Program--Phase II, 2017-01-20. The Small Business Innovation Research SBIR program is one of the largest examples of U S public private partnerships and was established in 1982 to encourage small businesses to develop new processes and products and to provide quality research in support of the U S government's many missions. The Small Business Technology Transfer STTR Program was created in 1992 by the Small Business Research and Development Enhancement Act to expand joint venture

opportunities for small businesses and nonprofit research institutions by requiring small business recipients to collaborate formally with a research institution. The U S Congress tasked the National Research Council with undertaking a comprehensive study of how the SBIR and STTR programs have stimulated technological innovation and used small businesses to meet federal research and development needs and with recommending further improvements to the programs. In the first round of this study an ad hoc committee prepared a series of reports from 2004 to 2009 on the SBIR and STTR programs at the five agencies responsible for 96 percent of the programs operations including the Department of Energy DoE. Building on the outcomes from the first round this second round presents the committee s second review of the DoE SBIR program s operations. Public private partnerships like SBIR and STTR are particularly important since today s knowledge economy is driven in large part by the nation s capacity to innovate. One of the defining features of the U S economy is a high level of entrepreneurial activity. Entrepreneurs in the United States see opportunities and are willing and able to assume risk to bring new welfare enhancing wealth generating technologies to the market. Yet although discoveries in areas such as genomics bioinformatics and nanotechnology present new opportunities converting these discoveries into innovations for the market involves substantial challenges. The American capacity for innovation can be strengthened by addressing the challenges faced by entrepreneurs.

An Assessment of the SBIR Program National Research Council, Policy and Global Affairs, Committee for Capitalizing on Science, Technology, and Innovation: An Assessment of the Small Business Innovation Research Program, 2009-01-29. The SBIR program allocates 2.5 percent of 11 federal agencies extramural R D budgets to fund R D projects by small businesses providing approximately 2 billion annually in competitive awards. At the request of Congress the National Academies conducted a comprehensive study of how the SBIR program has stimulated technological innovation and used small businesses to meet federal research and development needs. Drawing substantially on new data collection this report provides a comprehensive overview of the SBIR program at the five agencies representing 96 percent of program expenditure DOD NIH NSF DOE and NASA and makes recommendations on improvements to the program. Separate books on each agency will also be issued.
