Grab Grows Greener:

Grabbing Power Tanya M Kerssen, 2013-01-08 *Grabbing Power* explores the history of agribusiness and land conflicts in Northern Honduras focusing on the Aguán Valley where peasant movements battle large palm oil producers for the right to land. In the wake of a military coup that overthrew Honduran president Manuel Zelaya in June 2009, rural communities in the Aguán have been brutally repressed with over 60 people killed in just over two years. United States military aid spent in the name of the War on Drugs fuels the Honduran government's ability to repress its people. A strong and inspiring movement for land, food, and democracy has grown over the last two years and it shows no sign of backing down. **Grabbing Back**

Alexander Reid Ross, 2014-06-09 Land grabs are a global phenomenon of our times driven by the ever-increasing demands of both global corporations and the governments with which they are allied. But as this powerful and timely book demonstrates, ordinary citizens, small farmers, and ordinary citizens around the world are standing up to defend their own with passion and ingenuity, and they are recording successes that are both extraordinary and inspiring. Oliver Tickell, Editor, *The Ecologist*. Climate change ravages the earth while wealthy elites try to grab as much of the world's diminishing resources as possible. As Vandana Shiva writes, land is life. But land and the struggle to possess it is also power: colonial and corporate power to be sure, but also the power of the dispossessed to rise up and call for an end to the global land grab. *Grabbing Back* maps this struggle, bringing together analyses that uncover the politics of cultivation and control. In this unprecedented collection on the ground, activists join forces with critically acclaimed scholars to document the commodification and consumption of space, from foreclosed homes to annihilated rainforests, from ecotourism in Sri Lanka to the tar sands of Montana, and to outline the strategies and tactics that might avert the destruction. With contributions by Vandana Shiva, Noam Chomsky, Max Rameau, Grace Lee Boggs, Michael Hardt, Ahjamu Umi Ben Dangel, and many others. More Praise for *Grabbing Back*: Part of the reason that knowledge about the current global land grab is so uncertain is the paucity of perspectives and analysis in defining the problem. This book fills the gap admirably. Raj Patel, author of *Stuffed and Starved*. The acquisition, control, and exploitation of land, as well as the simultaneous dispossession of land-based and peasant communities, is central to the processes of both colonialism and capitalism. As Fanon reminds us, egalitarian governance and stewardship of land is fundamental to the struggle for liberation and self-determination for all oppressed peoples. This makes *Grabbing Back* a necessary study for anticapitalist and anticolonial movements. Harsha Walia, author of *Undoing Border Imperialism*. Grab back this sparkling mosaic of essays as a treasure of our new-old knowledge commons. Together, these pieces replace dichotomies with dialectics, making explicit the inseparability of land and collective life. Together, they restore the vital concept of social ecology in resistance to relentless and increasingly apocalyptic capitalism, with emphasis on its second contradiction: its impossibility on a finite resource base. Maia Ramnath, author of *Decolonizing Anarchism*. As the forces of thanatos leave no stone unturned in their quest to dominate the entire planet, this anthology provides a much-needed antidote. Weaving together accounts from

around the world the authors advocate building grassroots movements aimed at subverting capital's incessant assault on our lives and land George Katsiaficas author of *Asia's Unknown Uprisings* Never perhaps has the land question been so crucial for anti capitalist movements as we are witnessing a global process of enclosure that privatizes lands waters forests displacing millions from their homes and placing monetary gates to what we rightly considered our commonwealth It is essential then that we understand what motivates this drive and its effects in all their social and spatial dimensions *Grabbing Back* takes us through this process identifying the reasons and actors behind this global land grab and most important introducing us to the struggles that people are making across the world to resist being evicted from their lands and to reclaim the earth George Caffentzis Committee for Academic Freedom in Africa

The Global Land Grab Annelies Zoomers, Mayke Kaag, 2014-02-13 The last two years have seen a huge amount of academic policy making and media interest in the increasingly contentious issue of land grabbing the large scale acquisition of land in the global South It is a phenomenon against which locals seem defenceless and one about which multilateral organizations such as the World Bank as well as civil society organizations and action NGOs have become increasingly vocal This in depth and empirically diverse volume taking in case studies from across Africa Asia and Latin America takes a step back from the hype to explore a number of key questions Does the global land grab actually exist If so what is new about it And what beyond the immediately visible dynamics and practices are the real problems A comprehensive and much needed intervention on one of the most hotly contested but little understood issues facing countries of the South today

Land Grabbing and Global Governance Matias E. Margulis, Nora McKeon, Saturnino Borrás Jr., 2016-05-23 Land grabbing per se is not a new phenomenon given its historical precedents in the eras of imperialism However the character scale pace orientation and key drivers of the recent wave of land grabs is a distinct historical event closely tied to the changing dynamics of the global agri food feed and fuel complex Land grabbing is facilitated by ever greater flows of capital goods and ideas across borders and these flows occur through axes of power that are far more

polycentric than the North South imperialist tradition Land grabs occur in the context of changes in the character of the global food regime formerly anchored by North Atlantic empires the integrated food energy complex seems to be headed towards multiple centres of power especially with the rise of the BRICS and the proliferation of middle income countries participating in many of the land transactions Land Grabbing and Global Governance offers insights from leading scholars and experts on contemporary land grabs This volume examines land grabs in direct relation to a global economy undergoing profound change and the role of new configurations of actors and power in governance institutions and practices This book was published as a special issue of Globalizations

being developed with their environmental burden in mind. This also means that more traditional chemical methods are being replaced with new innovations and this includes new solvents. Solvents are everywhere but how necessary are they? They are used in most areas including synthetic chemistry, analytical chemistry, pharmaceutical production and processing the food and flavour industry and the materials and coatings sectors. However, the principles of green chemistry guide us to use less of them or to use safer, more environmentally friendly solvents if they are essential. Therefore, we should always ask ourselves: do we really need a solvent? Green chemistry, as a relatively new sub-discipline, is a rapidly growing field of research. Alternative solvents including supercritical fluids and room temperature ionic liquids form a significant portion of research in green chemistry. This is in part due to the hazards of many conventional solvents, e.g. toxicity and flammability, and the significant contribution that solvents make to the waste generated in many chemical processes. Solvents are important in analytical chemistry, product purification, extraction and separation technologies, and also in the modification of materials. Therefore, in order to make chemistry more sustainable in these fields, a knowledge of alternative greener solvents is important. This book, which is part of a green chemistry series, uses examples that tie in with the 12 principles of green chemistry, e.g. atom efficient reactions in benign solvents and processing of renewable chemicals, materials in green solvents. Readers get an overview of the many different kinds of solvents written in such a way to make the book appropriate to newcomers to the field and prepare them for the green choices available. The book also removes some of the mystique associated with alternative solvent choices and includes information on solvents in different fields of chemistry such as analytical and materials chemistry, in addition to catalysis and synthesis. The latest research developments not covered elsewhere are included, such as switchable solvents and biosolvents. Also, some important areas that are often overlooked are described, such as naturally sourced solvents including ethanol and ethyl lactate, and liquid polymers including poly ethyleneglycol and poly dimethylsiloxane. As well as these additional alternative solvents being included, the book takes a more general approach to solvents, not just focusing on the use of solvents in synthetic chemistry. Applications of solvents in areas such as analysis are overviewed, in addition to the more widely recognised uses of alternative solvents in organic synthesis. Unfortunately, as the book shows, there is no universal green solvent and readers must ascertain their best options based on prior chemistry, cost, environmental benefits and other factors. It is important to try and minimize the number of solvent changes in a chemical process, and therefore the importance of solvents in product purification, extraction and separation technologies are highlighted. The book is aimed at newcomers to the field, whether research students beginning investigations towards their thesis or industrial researchers curious to find out if an alternative solvent would be suitable in their work.

These key characteristics are self regulating cycles of key materials a plentiful and durable energy source an ability to adjust
to changing circumstances and the capacity for resiliency in the face of unpredictable disruptions In separate chapters each
of these natural attributes are applied to our economy and 20 policies are recommended to shift our economy toward each of
these objectives The policies include marketable waste emission permits a carbon tax split rate property taxation
environmental assurance bonds a revamped home mortgage deduction and an inheritance tax These policies function to
implement the principle of full cost pricing in order to ensure market incentives that encourage environmentally temperate
behaviour and decisions This book will be of interest to students of Ecology and Economics at undergraduate and
postgraduate level alike as well as anyone seeking an understanding of key ecological concepts that are critical to fully
appreciating the role of natural capital in our economic affairs
