Grade Models And Methods For Data Analysis:

Grade Models and Methods for Data Analysis Teresa Kowalczyk, Elzbieta Pleszczynska, Frederick Ruland, 2012-12-06 This book provides a new grade methodology for intelligent data analysis. It introduces a specific infrastructure of concepts needed to describe data analysis models and methods. This monograph is the only book presently available covering both the theory and application of grade data analysis and therefore aiming both at researchers, students as well as applied practitioners. The text is richly illustrated through examples and case studies and includes a short introduction to software implementing grade methods which can be downloaded from the editors.

Grade Models and Methods for Data Analysis Teresa Kowalczyk, Elzbieta Pleszczynska, Frederick Ruland, 2004-04-16 *Proceedings of the 8th International Conference on Computer Recognition Systems CORES 2013* Robert Burduk, Konrad Jackowski, Marek Kurzynski, Michał Wozniak, Andrzej Zolnierrek, 2013-05-23 The computer recognition systems are nowadays one of the most promising directions in artificial intelligence. This book is the most comprehensive study of this field. It contains a collection of 86 carefully selected articles contributed by experts of pattern recognition. It reports on current research with respect to both methodology and applications. In particular, it includes the following sections: Biometrics, Data Stream Classification and Big Data Analytics, Features learning and classifiers, Image processing and computer vision, Medical applications, Miscellaneous applications, Pattern recognition and image processing in robotics, Speech and word recognition. This book is a great reference tool for scientists who deal with the problems of designing computer pattern recognition systems. Its target readers can be the as well researchers as students of computer science, artificial intelligence or robotics.

Computer Recognition Systems Marek Kurzynski, Edward Puchala, Michał Wozniak, Andrzej Zolnierrek, 2007-12-13 This book contains papers accepted for presentation at the 4 International Conference on Computer Recognition Systems CORES 05, May 22-25, 2005, Rydzyna Castle, Poland. This conference is a continuation of a series of conferences on similar topics. KOSYR organized each second year since 1999 by the Chair of Systems and Computer Networks, Wrocław University of Technology. An increasing interest to those conferences paid not only by home but also by foreign participants inspired the organizers to transform them into conferences of international range. Our expectations that the community of specialists in computer recognizing systems will find CORES 05 a proper form of maintaining the tradition of the former conferences have been confirmed by a large number of submitted papers. Alas, organizational constraints caused a necessity to narrow the acceptance criteria so that only 100 papers have been finally included into the conference program. The area covered by accepted papers is still very large and it shows how vivacious is scientific activity in the domain of computer recognition methods and systems. It contains various theoretical approaches to the recognition problem based on mathematical statistics, fuzzy sets, morphological methods, wavelets, syntactic methods, genetic algorithms, artificial neural networks, ontological models, etc. Most attention is still paid to visual objects recognition; however, acoustic, textual and other objects are also considered. Among application areas, medical

problems are in majority recognition of faces speech signals and textual information processing methods being also investigated

Applied Nonparametric Statistical Methods Peter Sprent, 2012-12-06 This book is a

practical introduction to statistical techniques called nonpara metric methods Using examples we explain assumptions and demonstrate procedures theory is kept to a minimum We show how basic problems are tackled and try to clear up common misapprehensions so as to help both students of statistics meeting the methods for the first time and workers in other fields faced with data needing simple but informative analysis An analogy between experimenters and car drivers describes our aim Statistical analyses may be done by following a set of rules without understanding their logical basis but this has dangers It is like driving a car with no inkling of how the internal combustion engine the gears the ignition system the brakes actually work Understanding the rudiments helps one get better performance and makes driving safer appropriate gear changes become a way to reduce engine stress prolong engine life improve fuel economy minimize wear on brake linings Knowing how to change the engine oil or replace worn sparking plugs is not essential for a driver but it will reduce costs Learning such basics will not make one a fully fledged mechanic even less an automotive engineer but it all contributes to more economical and safer driving alerting one to the dangers of bald tyres a leaking exhaust worn brake linings
