Harbeke, 2012-12-06 In terms of structure the field of semiconductors spans a wide range from the perfect order of single crystals to the non periodic disordered amorphous state The two extremes of this range attract a large amount of interest On one side glamorous novel phenomena are being found which can only occur in specially tailored ultra perfect periodic lattices On the other side the exotic and challenging nature of the amorphous state has triggered a surge of activity in recent years Polycrystalline semiconductors are in between They are among the work horses in the field useful in many applications a handy solution to many practical problems and still they have not received in the past the amount of research interest that they deserve It is the aim of the present book to improve this situation The book originated from the lectures and seminars presented at the course on Polycrystalline Semiconductors Physical Properties and Applications of the International School on Materials Science and Technology held at the Centre for Scientific Culture Ettore Majorana in Erice Italy July 1-15 1984 *Compendium of Thermophysical Property Measurement Methods* A. Cezairliyan, K.D. Maglic, V.E. Grabmaier, 2013-06-29 1 1 The Role of Silicon as a Semiconductor Silicon is unchallenged as a semiconductor base material in our present electronics industry The reasons why it qualifies so strongly for this particular purpose are manifold The attractive combination of physical electrical properties of silicon and the unique properties of its native oxide layer have been the original factors for its breathtaking evolution in device technology The majority of reasons however for its present status are correlated with industrial processing in terms of charge units economy reliability reproducibility and flexibility but also its availability The latter point in particular plays an important role in the different long term projects on the terrestrial application of solar cells Practically

inexhaustive resources of silicon dioxide form a sound basis even for the most pretentious programs on future alternatives to relieve the present situation in electrical power generation by photovoltaics Assuming a maximum percentage of 10% to be replaced by the year 2000 would roughly mean a cumulative annual production of 2 million metric tons of crude silicon based on present solar cell standards To illustrate the orders of magnitude that have to be discussed in pertinent programs Today the industrial silicon capacity of non communist countries including ferrosilicon and other alloys by their relative Si content amounts to some 2 million tons per year *Frontiers of Ferroelectricity* Sidney B. Lang, Helen L.W.

Chan, 2007-12-31 The field of ferroelectricity is a very active one Many hundreds of papers in this field are published each year and a large number of local and international conferences are held We felt that it would be appropriate at this time to publish a set of papers in a single journal describing some of the most active areas in the field The Journal of Materials Science agreed to publish a special issue on ferroelectricity Accordingly we sent requests for papers to a number of research groups around the world It was difficult to select a small number of groups from among the many excellent ones in the field and we apologize to those not included We received 24 manuscripts from groups in North America Asia and Europe each one of which was reviewed by two referees The papers include reviews and current research both experimental and theoretical It was especially satisfying that the authors included not only established researchers but also many younger people who are destined to continue in the field in the future The special issue entitled *Frontiers of Ferroelectricity* appeared as Volume 41 Issue 1 of the Journal of Materials Science in January 2006 Because we believed that many researchers and students would find great value in having the complete set of papers on their bookshelf we suggested to the editors of Springer that *Frontiers of Ferroelectricity* should be published in book form **Non-oxides / Nicht-Oxide** M. Adachi, Y. Akishige, E. Nakamura, K.

Deguchi, K. Gesi, T. Hikita, Y. Makita, T. Ikeda, M. Mitsui, E. Sawaguchi, T. Shigenari, I. Tatsuzaki, Y. Shiozaki, K. Toyoda, J. Harada, T. Yagi, T. Yamada, M. Okuyama, K. Yoshino, 1990-12-19 Volume III 28 is a supplement to volume III 16a b *Ferroelectrics and Related Substances* It also consists of two parts a and b Subvolume III 28a which came out in December 1989 contains data on ferroelectric oxides supplementing III 16a which appeared in 1981 The present subvolume III 28b covers non oxides supplementing III 16b published in 1982 Reliable data on both pure compounds and solid solutions published mostly between 1978 and 1986 and some data from the literature up to early 1988 are critically evaluated and included The dielectric and ferroelectric behaviour as well as all other properties relevant to the characterization of these substances are presented in tables and figures About 22 000 references have been surveyed with the aid of a computer All values are given in SI units Rapid localization of the required data is facilitated by an alphabetical index of substances and a two dimensional survey of substances and properties dealt with in both subvolumes III 28b and III 16b **Microstructure, Property and Processing of Functional Ceramics** Qingrui Yin, Binghe Zhu, Huarong Zeng, 2010-06-27 *Microstructure Property and Processing of Functional Ceramics* describes the preparation property and local structure microscopy of

functional ceramics It covers functional ceramic fabrication processing grain boundary phenomena and micro nanoscale structures characterizations including scanning electron acoustic microscopy scanning probe acoustic microscopy and piezoresponse force microscopy This book is intended for advanced undergraduates graduates and researchers in the field of materials science microelectronics optoelectronics and microscopy Qingrui Yin and Binghe Zhu both are professors at the Shanghai Institute of Ceramics Chinese Academy of Sciences Dr Huarong Zeng is an associate professor at the Shanghai Institute of Ceramics Chinese Academy of Sciences
