Spoken Here Mark Abley, 2011-04-13 Whether on the other side of the world or in our own backyard languages everywhere are fading into oblivion Mark Abley explores what the human family stands to lose and explains why some endangered languages continue to thrive Within the next couple of generations most of the world's 6000 languages will vanish due mainly to the unstoppable tide of English With an open mind and a well worn passport award winning journalist and poet Mark Abley tells entertaining and vital stories about why languages matter From Oklahoma to Provence aboriginal Australia to Baffin Island the cultures are radically different but the problems of shrinking linguistic and cultural richness are painfully similar Abley's investigation provides a stunning glimpse of the beauty and intricacies of languages like Yiddish and Yuchi Mohawk and Manx Inuktitut and Provençal More importantly it offers a sympathetic and memorable portrait of the people who still speak languages under threat When a language dies out gone too are stories that have been told for centuries unique ways of seeing the world and perhaps even ways of solving problems both large and small Abley believes we must see languages as abundant sources of richness wonder and usefulness And he shows that hope still exists that the determination of even one person can revive a whole language and its culture in the process creating something new changing and alive exactly what languages do best

Highly complex syllable structure: A typological and diachronic study Shelece Easterday, 2019-11-13 The syllable is a natural unit of organization in spoken language whose strongest cross linguistic patterns are often explained in terms of a universal preference for the CV structure Syllable patterns involving long sequences of consonants are both typologically rare and theoretically marginalized with few approaches treating these as natural or unproblematic structures This book is an investigation of the properties of languages with highly complex syllable patterns The two aims are i to establish whether these languages share other linguistic features in common such that they constitute a distinct linguistic type and ii to identify possible diachronic paths and natural mechanisms by which these patterns come about in the history of a language These issues are investigated in a diversified sample of 100 languages 25 of which have highly complex syllable patterns Languages with highly complex syllable structure are characterized by a number of phonetic phonological and morphological features which serve to set them apart from languages with simpler syllable patterns These include specific segmental and suprasegmental properties a higher

prevalence of vowel reduction processes with extreme outcomes and higher average morpheme word ratios The results suggest that highly complex syllable structure is a linguistic type distinct from but sharing some characteristics with other proposed holistic phonological types including stress timed and consonantal languages The results point to word stress and specific patterns of gestural organization as playing important roles in the diachronic development of these patterns out of simpler syllable structures
