Elements of Computation Theory Arindama Singh,2009-04-30 The foundation of computer science is built upon the following questions What is an algorithm What can be computed and what cannot be computed What does it mean for a function to be computable How does computational power depend upon programming constructs Which algorithms can be considered feasible For more than 70 years computer scientists are searching for answers to such qu tions Their ingenious techniques used in answering these questions form the theory of computation Theory of computation deals with the most fundamental ideas of computer s ence in an abstract but easily understood form The notions and techniques employed are widely spread across various topics and are found in almost every branch of c puter science It has thus become more than a necessity to revisit the foundation learn the techniques and apply them with con dence Overview and Goals This book is about this solid beautiful and pervasive foundation of computer s ence It introduces the fundamental notions models techniques and results that form the basic paradigms of computing It gives an introduction to the concepts and mathematics that computer scientists of our day use to model to argue about and to predict the behavior of algorithms and computation The topics chosen here have shown remarkable persistence over the years and are very much in current use   Automatic Generation of Computer Animation Ruqian Lu,Songmao Zhang,2003-08-06 We are both fans of watching animated stories Every evening before or after d ner we always sit in front of the television and watch the animation program which is originally produced and shown for children We find ourselves becoming younger while immerged in the interesting plot of the animation how the princess is first killed and then rescued how the little rat defeats the big cat etc But what we have found in those animation programs are not only interesting plots but also a big chance for the application of computer science and artificial intelligence techniques As is well known the cost of producing animated movies is very high even with the use of computer graphics techniques Turning a story in text form into an animated movie is a long and complicated procedure We came to the c clusion that many parts of this process could be automated by using artificial telligence techniques It is actually a challenge and test for machine intelligence So we decided to explore the possibility of a full life cycle automation of c puter animation generation By full life cycle we mean the generation process of computer animation from a children s story in natural language text form to the final animated movie It is of course a task of immense difficulty However we decided to try our best and to see how far we could go   *Probabilistic Linguistics* Rens Bod,Jennifer Hay,Stefanie Jannedy,2003-04-08 For the past forty years linguistics has been dominated by the idea that language is

categorical and linguistic competence discrete It has become increasingly clear however that many levels of representation from phonemes to sentence structure show probabilistic properties as does the language faculty Probabilistic linguistics conceptualizes categories as distributions and views knowledge of language not as a minimal set of categorical constraints but as a set of gradient rules that may be characterized by a statistical distribution Whereas categorical approaches focus on the endpoints of distributions of linguistic phenomena probabilistic approaches focus on the gradient middle ground Probabilistic linguistics integrates all the progress made by linguistics thus far with a probabilistic perspective This book presents a comprehensive introduction to probabilistic approaches to linguistic inquiry It covers the application of probabilistic techniques to phonology morphology semantics syntax language acquisition psycholinguistics historical linguistics and sociolinguistics It also includes a tutorial on elementary probability theory and probabilistic grammars
