Les ordinateurs domestiques Raphaël

Vaillant, 1982-01-01T00:00:00+01:00 Ce livre s'adresse tous ceux qui souhaitent connaître les principes de fonctionnement et la diversité des applications des ordinateurs parce qu'ils pressentent l'importance que ces machines logiques grandes ou petites prendront dans la vie quotidienne des prochaines décennies. L'invention de l'ordinateur voit celle de la roue isolée, cette dernière n'est pas grande chose sauf de jouet. Mais lorsque dans une multitude de machines elle a bouleversé l'histoire. Les capacités des ordinateurs ont d'abord appliquées des problèmes logiques économiques scientifiques puis pendant des siècles. Il est difficile de prouver ce qu'elles permettront de faire une fois leur usage dans le quotidien entre les mains de millions de gens inventifs. Raphaël Vaillant au fil d'une longue enquête s'est attaché à créer les possibles que l'informatique et la technologie suggèrent en se appuyant sur une information très complète et très récente. Son dossier permet tous de comprendre un des enjeux fondamentaux de notre avenir. Les visages de l'avenir. Prospective scientifique et technique. C'est l'objet de la prospective de préparer les esprits des éventualités dont quelquesunes apparaissent très certaines mais dont d'autres sont improbables qu'elles demeurent très importantes ou graves. Les visages de l'avenir ne résultent pas des prophéties plus ou moins romanesques jouant sur la crédibilité du public ni des essais futurologiques présentant proposer une prévision unique et pseudo scientifique d'un avenir déjà critiqué. Elle accueille des ouvrages thématiques sur ce qui se passerait si dans des domaines très variés telles conditions étaient réunies. Cette collection comprend deux sections consacrées à une prospective scientifique et technologique et à une prospective sociale.

Pour une réindustrialisation numérique ! Laurent

Bloch, 2024-08-22T00:00:00Z Il faut réindustrialiser la France tous les programmes politiques en sont d'accord. C'est l'industrie informatique et microélectronique aujourd'hui première industrie mondiale dont dépendent toutes les autres qui la permettent. Depuis 50 ans nous vivons la troisième révolution industrielle après celle de la machine vapeur et celle de l'électricité industrielle et du moteur à combustion interne. Elle est issue de l'invention en 1971 du microprocesseur qui a divisé par 1000 la taille et le prix des ordinateurs ce qui a permis leur diffusion mondiale des milliards d'exemplaires. L'ordinateur omniprésent a engendré l'Internet et le Web disponibles sur toute la planète infrastructure indispensable tous les changements économie et culture comme on l'a vu lors de la panne CrowdStrike. Ce livre en explique les principaux éléments composants électroniques des ordinateurs logiciels et Internet comment ils sont construits et fabriqués. Toutes les technologies qui peuvent être automatisées le sont ou le seront. L'emploi se concentre de plus en plus dans des activités qui demandent un bon niveau de formation dès lors qu'il le faut. L'impératif au système éducatif est crucial. La France et l'Europe ont trouvé de cette aventure. Notre continent possède des atouts significatifs : le premier marché mondial, un réseau unique d'universités et de centres de recherche, un tissu industriel dense. Il n'est pas fatal que le centre de l'industrie moderne soit Taiwan ou en Corée.
