Governing the Atom John Byrne, Steven M. Hoffman, 1996 **The National Politics of Nuclear Power** Benjamin K. Sovacool, Scott Victor Valentine, 2012-05-16 This book offers a comprehensive assessment of the dynamics driving and constraining nuclear power development in Asia Europe and North America providing detailed comparative analysis The book formulates a theory of nuclear socio political economy which highlights six factors necessary for embarking on nuclear power programs 1 national security and secrecy 2 technocratic ideology 3 economic interventionism 4 a centrally coordinated energy stakeholder network 5 subordination of opposition to political authority and 6 social peripheralization The book validates this theory by confirming the presence of these six drivers during the initial nuclear power developmental periods in eight countries the United States France Japan Russia the former Soviet Union South Korea Canada China and India The authors then apply this framework as a predictive tool to evaluate contemporary nuclear power trends They discuss what this theory means for developed and developing countries which exhibit the potential for nuclear development on a major scale and examine how the new renaissance of nuclear power may affect the promotion of renewable energy global energy security and development policy as a whole The volume also assesses the influence of climate change and the recent nuclear accident in Fukushima Japan on the nuclear power industry s trajectory This book will be of interest to students of energy policy and security nuclear proliferation international security global governance and IR in general

Governing the Atom John Byrne, Steven M. Hoffman, 2020-02-21 Promoted as a form of limitless low cost energy without the polluting effects of its fossil fuel counterparts nuclear power has enjoyed unparalleled support in several countries Despite the development of an extensive set of policy and institutional mechanisms to foster its use nuclear technology has been troubled by a wide range of problems and continues to pose risks many believe are far greater than society should accept The legacy of failure ranges from catastrophic accidents like that at Chernobyl to the declaration of bankruptcy by the Washington Public Power Supply System Governing the Atom explores why support for the technology remains substantial The first part of this volume examines the social institutions that have accompanied the development of nuclear power The second part details the numerous accommodations which have been required of society beginning with the technology s impact on communities and geographic regions particularly affected by mining and milling The technology s inherent tendency towards normal accidents and the conflict between expert and public opinion on the dangers involved is examined as are the on going problems of waste disposal and decommissioning The volume concludes with an examination of nuclear power developments in France Germany Russia and the Commonwealth of Independent States Eastern Europe Korea and Japan The volume provides a needed vehicle for the timely consultation and dissemination of current research on important energy policy issues Governing the Atom provides insightful commentary regarding the initiation and development of nuclear technology It will be of interest to policymakers energy and environmental experts sociologists and historians of technology and all those

The Routledge Handbook of the Political Economy of Science David Tyfield, Rebecca Lave, Samuel Randalls, Charles Thorpe, 2017-04-28 The political economy of research and innovation R I is one of the central issues of the early twenty first century Science and innovation are increasingly tasked with driving and reshaping a troubled global economy while also tackling multiple overlapping global challenges such as climate change or food security global pandemics or energy security But responding to these demands is made more complicated because R I themselves are changing Today new global patterns of R I are transforming the very structures institutions and processes of science and innovation and with it their claims about desirable futures Our understanding of R I needs to change accordingly Responding to this new urgency and uncertainty this handbook presents a pioneering selection of the growing body of literature that has emerged in recent years at the intersection of science and technology studies and political economy The central task for this research has been to expose important but consequential misconceptions about the political economy of R I and to build more insightful approaches This volume therefore explores the complex interrelations between R I both in general and in specific fields and political economies across a number of key dimensions from health to environment and universities to the military The Routledge Handbook of the Political Economy of Science offers a unique collection of texts across a range of issues in this burgeoning and important field from a global selection of top scholars The handbook is essential reading for students interested in the political economy of science technology and innovation It also presents succinct and insightful summaries of the state of the art for more advanced scholars

Out of the Nuclear Shadow Smitu Kothari, Zia Mian, 2001 Outraged conscience careful argument poetry and political analysis gathered here is the diversity of voices traditions and approaches that are weaving themselves into an anti nuclear and peace movement in India and Pakistan In these essays written before during and after the May 1998 nuclear explosions scholars and activists from both countries attempt to understand and challenge the nuclearisation of South Asia The essays are an act of resistance against governments that see nuclear weapons as a currency of power as symbols of prestige as sources of security as moments of glory in an otherwise dismal contemporary history The collection includes Mahatma Gandhi s response to the atomic bombing of Hiroshima and recent writings by renowned scholars Eqbal Ahmad Rajni Kothari Ashis Nandy and Amartya Sen as well as Arundhati Roy and veteran anti nuclear activists academics and journalists The volume also contains the texts of many of the historic public statements protesting the May 1998 nuclear tests which helped mobilise public opposition to the bomb in South Asia There is a resource guide to books films and websites on nuclear weapons as well as information on many organisations now working on this issue

The Governance of Energy Megaprojects Benjamin K. Sovacool, C. J. Cooper, 2013-07-01 Benjamin Sovacool and Christopher Jon Cooper have produced an astonishing and well written book based on extensive original research in twelve countries They explore the technical social political and economic dimensions of four energy megaprojects The large scale of megaprojects always appears to complicate the decision

making process and often causes failures Megaprojects may even reinforce corruption and erode democracy It highlights that today's experiences can be explained by statements by Aristotle and Einstein who argue both in their own way that it is always wise to take the limits of size into account and to reduce the size of projects wherever this is possible For everybody involved in megaprojects this book must be read Hugo Priemus Delft University of Technology The Netherlands Based on extensive original research this book explores the technical social political and economic dimensions of four Asian energy megaprojects a regional natural gas pipeline network in Southeast Asia a series of hydroelectric dams on the island of Borneo an oil pipeline linking Europe with the Caspian Sea and a very large solar energy array in the Gobi desert This book investigates why energy megaprojects fail to deliver their promised benefits It offers the first comprehensive assessment of the complicated dynamics driving and constraining megaprojects initiated in the rapid scramble for energy resources and efforts to improve energy security The authors approach the assessment of megaprojects from a socio technical angle emphasizing broad issues of political leadership regulation financing interest group opposition and environmental impact as well as conventional technological factors such as engineering design and project management The Governance of Energy Megaprojects will prove insightful for academics concerned about energy policy energy security environmental impact and technology assessment But the book should prove equally compelling to those engaged in the practical management and implementation of large scale energy projects anywhere in the world

Nuclear Power and Energy Policy Gerry Stoker, Keith Baker, 2016-04-29 This book explores how different governments have leveraged their capacity to advance a revival of nuclear power Presenting in depth case studies of France Finland Britain and the United States Baker and Stoker argue that governments may struggle to promote new investment in nuclear power

Contesting The Future Of Nuclear Power: A Critical Global Assessment Of Atomic Energy Benjamin K Sovacool, 2011-05-05 This book provides a concise but rigorous appraisal about the future of nuclear power and the presumed nuclear renaissance It does so by assessing the technical economic environmental political and social risks related to all aspects of the nuclear fuel cycle from uranium mills and mines to nuclear reactors and spent fuel storage facilities In each case the book argues that the costs of nuclear power significantly outweigh its benefits It concludes by calling for investments in renewable energy and energy efficiency as a better path towards an affordable secure and socially acceptable future The prospect of a global nuclear renaissance could change the way that energy is produced and used the world over Sovacool takes a hard look at who would benefit mostly energy companies and manufacturers and who would suffer mostly taxpayers those living near nuclear facilities and electricity customers This book is a must read for anyone even remotely concerned about a sustainable energy future and also for those with a specific interest in modern nuclear power plants

Environmental Justice Paul Thompson, 2017-09-29 Environmental justice is one of the most controversial and important issues in contemporary social science Volume 8 of the Energy and Environmental Policy series challenges our understanding of environmental justice in a

global context It includes theoretical investigations and case studies by leading authors in the field Global forces of technology and the development of global markets are transforming social life and the natural order These changes require a critical examination of nature society relations Increasingly modernization assigns the risks of modernity to those with the least power and greatest vulnerability to environmental harm Conventional environmentalism which focuses on critique of the effects of humanity against nature is inadequate to the challenges of globalization In particular it fails to explain sources of persistent patterns of social injustice that accompany escalating environmental exploitation As the capacity for environmental destruction expands broader concerns about environmental injustice have come to the fore including awareness of threats to whole cultures ways of life and entire ecologies The volume s authors consider the links between expanded patterns of environmental injustice and the structures and forces underlying and shaping the international political economy Environmental injustice is examined across a variety of cultures in the developed and developing world Through case studies of climate colonialism revolutionary ecology and environmental commodification the global and local dimensions of the problem are presented The latest volume in this important series demonstrates that environmental justice cannot be reduced to simple parables of indifference prejudice or appropriation It forges understanding of environmental injustice as a development of international political economy itself Likewise initiatives on behalf of environmental justice are seen as elements of broader movements to secure self determination in a globalizing world This book will be of interest to policymakers energy and environmental experts and all those interested in the environment and environmental law It provides new perspectives on the place of environmental justice in international political and economic conflict

Visions of Energy Futures Benjamin K. Sovacool, 2019-03-04 This book examines the visions fantasies frames discourses imaginaries and expectations associated with six state of the art energy systems nuclear power hydrogen fuel cells shale gas clean coal smart meters and electric vehicles playing a key role in current deliberations about low carbon energy supply and use *Visions of Energy Futures Imagining and Innovating Low Carbon Transitions* unveils what the future of energy systems could look like and how their meanings are produced often alongside moments of contestation Theoretically it analyzes these technological case studies with emerging concepts from various disciplines utopianism history of technology symbolic convergence communication studies technological frames social construction of technology discursive coalitions discourse analysis and linguistics sociotechnical imaginaries science and technology studies and the sociology of expectations innovation studies future studies It draws from these cases to create a synthetic set of dichotomies and frameworks for energy futures based on original data collected across two global epistemic communities nuclear physicists and hydrogen engineers and experts in Eastern Europe and the Nordic region stakeholders in South Africa and newspapers in the United Kingdom This book is motivated by the premise that tackling climate change via low carbon energy systems and practices is one of the most significant challenges of the twenty first century and that success will require not only new energy technologies but also new ways of understanding language visions and discursive politics The discursive creation of the energy systems of tomorrow are propagated in polity hoping to be realized as the material fact of the future but processed in conflicting ways with underlying tensions as to how contemporary societies ought to be ordered This book will be essential reading for students and scholars of energy policy energy and environment and technology assessment

Site Fights Daniel P. Aldrich, 2011-03-15 One of the most vexing problems for governments is building controversial facilities that serve the needs of all citizens but have adverse consequences for host communities Policymakers must decide not only where to locate often unwanted projects but also what methods to use when interacting with opposition groups In *Site Fights* Daniel P Aldrich gathers quantitative evidence from close to five hundred municipalities across Japan to show that planners deliberately seek out acquiescent and unorganized communities for such facilities in order to minimize conflict When protests arise over nuclear power plants dams and airports agencies regularly rely on the coercive powers of the modern state such as land expropriation and police repression Only under pressure from civil society do policymakers

move toward financial incentives and public relations campaigns Through fieldwork and interviews with bureaucrats and activists Aldrich illustrates these dynamics with case studies from Japan France and the United States The incidents highlighted in Site Fights stress the importance of developing engaged civil society even in the absence of crisis thereby making communities both less attractive to planners of controversial projects and more effective at resisting future threats

management and communication has been at the core of the EU decision making for a long time already EU Institutions strive for a science based approach to risk management Nevertheless the dialogue and collaboration on risk issues between policy makers stakeholders and scientists are still difficult and the potential and limits of science in support of decision making as well as the basic concepts of risk analysis are not fully understood outside the narrow specialist circles

The Journal of Energy and Development ,1996 *Ethics and Economic Governance* Chris Clarke,2015-10-23 This book seeks to explore the ethical dimensions of economic governance through an engagement with Adam Smith and a critical analysis of economic understandings of the Global Financial Crisis It examines ethical and political dilemmas associated with key aspects of the financialisation of Anglo American economy and society including systems of asset based welfare modern risk management and debt In the wake of the financial crisis recognition of the way in which everyday lives and life chances are tied into global finance is widespread Yet few contributions in IPE explicitly tackle this issue as a question of ethics By developing Adam Smith s under utilised account of how market oriented behaviour is constituted through a process of sympathy this book provides an innovative way of understanding contemporary issues of economic governance and the possibilities and limits for intervention within it By taking Adam Smith s moral philosophy seriously it becomes evident that the ever deeper enmeshing of finance in our everyday lives is a failed experiment Turning the common understanding of Smith on its head we can also turn accepted wisdom about the recent financial crisis on its head and see the urgency of making better known the ethico political contestation that lies at the heart of financial market relations It will be of interest to students and scholars of IPE as well as those across the social sciences who wish to question the foundations of contemporary economy and society
