Grassland Structure And Function California Annual Grassland:

Grassland structure and function L.F. Huenneke, H.A. Mooney, 2012-12-06 The chapters in this volume are based on a symposium on the links between structure and function of California grasslands. The primary objective of the symposium was to integrate the current understanding of controls on ecosystem structure and function with the approaches of population level processes and system level phenomena in a well studied understanding of controls on ecosystem structure and function. Unfortunately some areas of current research e.g. nutrient cycling are under development. The annual grasslands are represented in this volume. For other topics eminently suitable for experimental and manipulative studies of ecosystem processes the short lives and small stature of the component plants brought a broader grassland perspective. Plant species make experimental work far more difficult. Together however the contributions illustrate practical approaches in studying the controls on structure and function of a complex system. The region's mediterranean climate in the life cycle of the annual vegetation afford many L.F. Huenneke and H.A. Mooney. Huenneke L.F. and Mooney H. eds. **Grassland Structure and Function California Annual Grassland**. **California Grasslands** Mark R. Stromberg, Jeffrey D. Corbin, Carla D'Antonio, 2007-12-03 This highly synthetic and scholarly work brings together new and important scientific contributions by leading experts on a rich diversity of topics concerning the history, ecology and conservation of California's endangered grasslands. The editors and authors have succeeded admirably in drawing from a great wealth of recent research to produce a widely accessible and compelling state of the art treatment of this fascinating subject. Anyone interested in Californian biodiversity or grassland ecosystems in general will find this book to be an invaluable resource and a major inspiration for further research, management and restoration efforts. Bruce G. Baldwin, W.L. Jepson Professor and Curator UC Berkeley. Grasses and grasslands are among the most important elements of the California landscape. This is their book embodying the kind of integrated view needed for all ecological communities in California. Approaches ranging across an incredibly broad spectrum: paleontology and human history, basic science and practical management techniques, systematics, community ecology, physiology and genetics, physical factors such as water, soil, nutrients, atmospheric and fire, biological factors such as competition, symbiosis and grazing are nicely tied together due to careful editorial work. This is an indispensable reference for everyone interested in the California environment. Brent Mishler, Director of the University and Jepson Herbaria and Professor of Integrative Biology UC Berkeley. The structure and function of California grasslands have intrigued ecologists for decades. The editors of this volume have assembled a comprehensive set of reviews by a group of outstanding authors on the natural history, structure, management and restoration of this economically and ecologically important ecosystem. Ecosystems of California Harold Mooney, Erika Zavaleta, 2016-01-19 This long anticipated reference and sourcebook for California's remarkable ecological abundance provides an integrated assessment of each major ecosystem type its distribution structure function and management A comprehensive synthesis of our knowledge about this biologically diverse state *Ecosystems of California* covers the state from oceans to mountaintops using multiple lenses past and present flora and fauna aquatic and terrestrial natural and managed Each chapter evaluates natural processes for a specific ecosystem describes drivers of change and discusses how that ecosystem may be altered in the future This book also explores the drivers of California's ecological patterns and the history of the state's various ecosystems outlining how the challenges of climate change and invasive species and opportunities for regulation and stewardship could potentially affect the state's ecosystems The text explicitly incorporates both human impacts and conservation and restoration efforts and shows how ecosystems support human well being Edited by two esteemed ecosystem ecologists and with overviews by leading experts on each ecosystem this definitive work will be indispensable for natural resource management and conservation professionals as well as for undergraduate or graduate students of California's environment and curious naturalists

Terrestrial Vegetation of California, 3rd Edition Michael Barbour, Todd Keeler-Wolf, Allan A. Schoenherr, 2007-07-17 This completely new edition of *Terrestrial Vegetation of California* clearly documents the extraordinary complexity and richness of the plant communities and of the state and the forces that shape them This volume is a storehouse of information of value to anyone concerned with meeting the challenge of understanding managing or conserving these unique plant communities under the growing threats of climate change biological invasions and development Harold Mooney Professor of Environmental Biology Stanford University The plants of California are under threat like never before Traditional pressures of development and invasive species have been joined by a newly recognized threat human caused climate change It is essential that we thoroughly understand current plant community dynamics in order to have a hope of conserving them This book represents an important well timed advance in knowledge of the vegetation of this diverse state and is an essential resource for professionals students and the general public alike Brent Mishler Director of the University Jepson Herbaria and Professor of Integrative Biology University of California Berkeley *Rangeland Health Standards and Guidelines [CA, NV]*

, 1998 Serpentine Susan Harrison, Nishanta Rajakaruna, 2011-02-02 Serpentine soils have long fascinated biologists for the specialized floras they support and the challenges they pose to plant survival and growth This volume focuses on what scientists have learned about major questions in earth history evolution ecology conservation and restoration from the study of serpentine areas especially in California Results from molecular studies offer insight into evolutionary patterns while new ecological research examines both species and communities *Serpentine* highlights research whose breadth provides context

General Technical Report PSW. ,1990 **Fire and Climatic Change in Temperate Ecosystems of the Western Americas** Thomas T. Veblen,William L. Baker,Gloria Montenegro,Thomas W. Swetnam,2006-05-10 Both fire and climatic variability have monumental impacts on the dynamics of temperate ecosystems These impacts can sometimes be extreme or devastating as seen in recent El Nino La Nina cycles and in uncontrolled fire occurrences This volume brings together research conducted in western North and South America areas of a great deal of collaborative work on the influence of people and climate change on fire regimes In order to give perspective to patterns of change over time it emphasizes the integration of paleoecological studies with studies of modern ecosystems Data from a range of spatial scales from individual plants to communities and ecosystems to landscape and regional levels are included Contributions come from fire ecology paleoecology biogeography paleoclimatology landscape and ecosystem ecology ecological modeling forest management plant community ecology and plant morphology The book gives a synthetic overview of methods data and simulation models for evaluating fire regime processes in forests shrublands and woodlands and assembles case studies of fire climate and land use histories The unique approach of this book gives researchers the benefits of a north south comparison as well as the integration of paleoecological histories current ecosystem dynamics and modeling of future changes **Measuring Soil and Tree Temperatures During Prescribed Fires with Thermocouple Probes** Stephen S. Sackett,1992 Soil and cambium temperatures must be known to ascertain certain effects of prescribed fires on trees Thermocouple based systems were devised for measuring soil and cambium temperatures during prescribed fires The systems which incorporate both commercially available and custom components perform three basic functions data collection data retrieval and data translation Although the systems and procedures for using them were designed for research purposes they could be adapted for monitoring operational prescribed fires *Land of Chamise and Pines* Richard A. Minnich,Ernesto Franco Vizcaino,1998-11-04 In marked contrast to California s landscape of urban sprawl expansive agriculture and wildlands altered by protectionist management systems many landscapes in neighboring Baja California would still be recognizable to the first European explorers This book shows that the vegetation of present day Baja California is remarkably similar to that observed in the 18th and 19th centuries and that historical fire and grazing management has done little to alter the region s resilient mediterranean type shrublands and forests Valuing Chaparral Emma C. Underwood,Hugh D. Safford,Nicole A. Molinari,Jon E. Keeley,2018-04-09 Chaparral shrubland ecosystems are an iconic feature of the California landscape and a highly biodiverse yet highly flammable backdrop to some of the fastest growing urban areas in the United States Chaparral type ecosystems are a common element of all of the world s Mediterranean type climate regions of which California is one yet

there is little public appreciation of the intrinsic value and the ecosystem services that these landscapes provide Valuing Chaparral is a compendium of contributions from experts in chaparral ecology and management with a focus on the human relationship with chaparral ecosystems Chapters cover a wide variety of subjects ranging from biodiversity to ecosystem services like water provision erosion control carbon sequestration and recreation from the history of human interactions with chaparral to current education and conservation efforts and from chaparral restoration and management to scenarios of the future under changing climate land use and human population Valuing Chaparral will be of interest to resource managers the research community policy makers and the public who live and work in the chaparral dominated landscapes of California and other Mediterranean type climate regions

Exotic Brome-Grasses in Arid and Semiarid Ecosystems of the Western US Matthew J. Germino, Jeanne C. Chambers, Cynthia S. Brown, 2016-01-22

Invasions by exotic grasses particularly annuals rank among the most extensive and intensive ways that humans are contributing to the transformation of the earth's surface The problem is particularly notable with a suite of exotic grasses in the *Bromus* genus in the arid and semiarid regions that dominate the western United States which extend from the dry basins near the Sierra and Cascade Ranges across the Intermountain Region and Rockies to about 105° longitude This genus includes approximately 150 species that have a wide range of invasive and non invasive tendencies in their home ranges and in North America *Bromus* species that became invasive upon introduction to North America in the late 1800s such as *Bromus tectorum* and *B. rubens* have since become the dominant cover on millions of hectares Here millennia of ecosystem development led to landscapes that would otherwise be dominated by perennial shrubs herbs and biotic soil crusts that were able to persist in spite of variable and scarce precipitation This native ecosystem resilience is increasingly coveted by land owners and managers as more hectares lose their resistance to *Bromus* grasses and similar exotics and as climate land use and disturbance regime changes are also superimposed Managers are increasingly challenged to glean basic services from these ecosystems as they become invaded Exotic annual grasses reduce wildlife and livestock carrying capacity and increase the frequency and extent of wildfires and associated soil erosion This book uses a unique ecoregional and multidisciplinary approach to evaluate the invasiveness impacts and management of the large *Bromus* genus Students researchers and practitioners interested in *Bromus* specifically and invasive exotics in general will benefit from the depth of knowledge summarized in the book

Invasive Species in a Changing World, Invasive Species in a Changing World provides readers with the background and knowledge they need to begin developing strategies to combat the invasive species problem and it is essential reading for anyone concerned with the impact of invasive species on ecosystem health and functioning

BOOK JACKET

Ecology of World Vegetation O.W. Archibald, 2012-12-06 The ecology of world vegetation is described in number all of the drafting and photographic work They have our books and journals but these are usually very spent many hours on this project and their care and skill specialized

in their scope and treatment This book provides is reflected in the consistently high quality of the illustrations a synthesis of this literature A brief introductory chapter throughout the book Many friends and colleagues have provided photographs It has not been possible to include all of them but the global perspective of the book has been greatly enhanced in this way used for each biome type These chapters begin with a description of environmental conditions and a brief account of floristic diversity in a regional context The remaining pages describe characteristic adaptations and processes for their unfailing ability to get even the most obscure Although there is a rapidly growing literature on ecological references

Ecosystems of Disturbed Ground L.R. Walker, 1999-12-17 As the human population inexorably grows its cumulative impact on the Earth's resources is hard to ignore The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground Natural disturbances such as erosion volcanoes wind herbivory flooding and drought plus anthropogenic disturbances such as forestry grazing mining urbanization and military actions are considered Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes nutrient cycles primary productivity succession animal behaviour and competition Humans react to disturbances by avoiding exacerbating or restoring them or by passing environmental legislation All of these issues are covered in this book Managers need better predictive models and robust data collections that help determine both site specific and generalized responses to disturbance Multiple disturbances have a complex effect on both physical and biotic processes as they interact This book provides a wealth of detail about the process of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation
