H.C. Ørsted's Theory of Force Hans Christian Ørsted, 2003 **H.C. Ørsted's Theory of Force** Anja Skaar Jacobsen, A.D Jackson, Karen Jøved, Helge Kragh, 2003 *Hans Christian Ørsted* Dan Ch Christensen, 2013-05-23 This is the narrative of the Scandinavian scientist Hans Christian Ørsted the discoverer of electromagnetism Ørsted was also one of the cultural leaders and organizers of the Danish Golden Age making significant contributions to aesthetics philosophy pedagogy politics and religion *Language as a Scientific Tool* Miles MacLeod, Rocío G. Sumillera, Jan Surman, Ekaterina Smirnova, 2016-01-29 Language is the most essential medium of scientific activity Many historians sociologists and science studies scholars have investigated scientific language for this reason but only few have examined those cases where language itself has become an object of scientific discussion Over the centuries scientists have sought to control refine and engineer language for various epistemological communicative and nationalistic purposes This book seeks to explore cases in the history of science in which questions or concerns with language have bubbled to the surface in scientific discourse This opens a window into the particular ways in which scientists have conceived of and construed language as the central medium of their activity across different cultural contexts and places and the clashes and tensions that have manifested their many attempts to engineer it to both preserve and enrich its function The subject of language draws out many topics that have mostly been neglected in the history of science such as the connection between the emergence of national languages and the development of science within national settings and allows us to connect together historical episodes from many understudied cultural and linguistic venues such as Eastern European and medieval Hebrew science **The Spinning Magnet** Alanna Mitchell, 2018-01-30 The mystery of Earth's invisible life supporting power Alanna Mitchell's globe trotting history of the science of electromagnetism and the Earth's magnetic field right up to the latest indications that the North and South Poles may soon reverse with apocalyptic results will soon change the way you think about our planet Award winning journalist Alanna Mitchell's science storytelling introduce intriguing characters from the thirteenth century French investigations into magnetism and the Victorian era discover that electricity and magnetism emerge from the same fundamental force to the latest research No one has ever told so eloquently how the Earth itself came to be seen as a magnet spinning in space with two poles and that those poles have dramatically reversed many times often coinciding with mass extinctions The most recent reversal was 780 000 years ago Mitchell explores indications that the Earth's magnetic force field is decaying faster than previously thought When the poles switch a process that takes many years the Earth is unprotected from solar radiation storms that would among other disturbances wipe out much and possibly all of our electromagnetic technology Navigation for all kinds of animals is disrupted without a stable magnetic North Pole But can you imagine no satellites no Internet no smartphones maybe no power grids at all Alanna Mitchell offers a beautifully crafted narrative history of surprising ideas and science illuminating invisible parts of our own planet that are constantly changing around us *Ørsted and the Discovery of Electromagnetism*

Bern Dibner,1963

The discovery of electromagnetism made in the year 1820 by H.C. Oersted Hans Christian Ørsted,1920
