Particle Interactions at Very High Energies David Speiser, Francis Halzen, Jacques Weyers, 2013-04-17 The Summer Institute on High Energy Physics was the second of this kind organized at Louvain Four years ago we had already decided to organize a Summer Institute The first one was conceived in 1970 at Kiev by D Speiser J Weyers and G Zweig and thanks to a NATO grant took place from August 20th to September 15th 1971 at Louvain in the Groot Begijnhof All lectures were directed toward one subject duality The lecturers were R Brout ULB Bruxelles D Fairlie University of Durham F Gilman SLAC Stanford D Horn University of Tel Aviv J Mandula Caltech Pasadena C Michael CERN Geneva J Rosner University of Minnesota C Schmidt CERN Geneva J Veneziano The Weizmann Institute J Weyers UCL Louvain and CERN Geneva and G Zweig Caltech Pasadena The direction was in the hands of F Cerulus KUL Louvain R Rodenberg Technische Hochschule Aachen D Speiser UCL Louvain and J Weyers CERN Geneva Unfortunately it was not possible to publish the lecture notes for that Institute The second Summer Institute on Elementary Particle Physics took place from August 12th to August 25th 1973 again in Louvain It was initiated in Chicago in 1972 by F Halzen University of Wisconsin and J Weyers UCL Louvain and CERN Geneva Lecturers included R Carlitz University of Chicago F Gilman SLAC Stanford F Halzen University of Wisconsin D

High Energy Hadronic Interactions J. Thanh Van Tran, 1990 **High-Energy Particle Diffraction** Vincenzo Barone, Enrico Predazzi, 2013-03-09 High energy diffraction has become a hot and fashionable subject in recent years due to the great interest triggered by the HERA and Tevatron data These data have helped to show the field from a different perspective paving the road to a hopefully more complete understanding than hitherto achieved The forthcoming data in the next few years from even higher energies LHC promise to sustain this interest for a long time We believe that it is therefore necessary to summarize the main developments which have marked the growth of high energy diffractive physics in recent decades and to assess the present state of the art This is the purpose of the present book which is especially aimed at the young researchers who are entering the field and want to get acquainted with the relevant results and the main theoretical techniques The new diffraction has started to bridge the gap between the hard and soft regimes of strong interactions A modern account of the subject in our opinion should reflect this situation covering both the traditional approaches to soft processes which are still alive and useful and the modern treatment of hard dynamics in the framework of perturbative QCD The book is divided into three parts The first part Chaps 1-3 contains some introductory material the systematics of diffractive processes some historical remarks the optical analogy the eikonal approximation of quantum mechanics and high energy kinematics In the second part Chaps **ERDA Energy Research Abstracts** United States.
