*Chemical and Biogeochemical Processes at Methane and Other Cold Seeps* Davide Oppo, Dong Feng, Samantha Joye, Jörn Peckmann, Jennifer Zwicker, 2023-10-31 Methane is a strong climate active gas the concentration of which is rapidly increasing in the atmosphere Vast methane reservoirs are hosted in seafloor sediments both dissolved in pore fluids and trapped in gas hydrate Cold seeps discharge significant amounts of this methane into the ocean The rate of seabed methane discharge could be orders of magnitude higher than current estimates creating considerable uncertainty The extent of methane transfer from the seafloor to the water column and ultimately to the atmosphere is also uncertain The seepage of methane and other hydrocarbons drives complex biogeochemical processes in marine sediments and the overlying water column Seeps support chemosynthesis based communities and impact the chemistry of the water column Seeps may also play a critical role in ocean acidification and deoxygenation and can be geohazards as well as a potential energy resource Unraveling the complex and dynamic interactions and processes at marine seeps is crucial for our understanding of element cycling in the geo and hydrosphere Regulating Water Security in Unconventional Oil and Gas Regina M. Buono, Elena López Gunn, Jennifer McKay, Chad Staddon, 2019-10-31 This book addresses the need for deeper understanding of regulatory and policy regimes around the world in relation to the use of water for the production of unconventional hydrocarbons including shale gas coal bed methane and tight oil through hydraulic fracturing Legal policy political and regulatory issues surrounding the use of water for hydraulic fracturing are present at every stage of operations Operators and regulators must understand the legal political and hydrological contexts of their surroundings procure water for use in the fracturing and extraction processes gain community cooperation or confront social resistance around water collect flow back and produced water and dispose of these wastewaters safely By analysing and comparing different approaches to these issues from around the globe this volume gleans insights into how policy best practices and regulation may be developed to advance the interests of all stakeholders While it is not always possible to easily transfer good practice from one place to another there is value in examining and understanding the components of different legal and regulatory regimes as these may assist in the development of better regulatory law and policy for the rapidly growing unconventional energy sector The book takes an interdisciplinary approach and includes chapters looking at water energy nexus security in general along with issue focused and geographically focused case studies written by scholars from around the world Chapter topics organized in conjunction with the stage of the shale gas production process upon which they touch include the implications of hydraulic fracturing for agriculture municipalities and other stakeholders competing for water supplies public opinion regarding use of water for hydraulic fracturing potential conflicts between hydraulic fracturing and water as a human right prevention of induced seismic activity and the disposal or recycling of produced water Several chapters also discuss implications of unconventional energy production for indigenous communities particularly as regards sustainable water management This volume will be of

interest to scholars and students of energy and water regulators and policymakers and operators interested in ensuring that they align with emergent best global practice

*Deep Subsurface Microbiology* Andreas Teske, Jennifer F. Biddle, Virginia P. Edgcomb, Axel Schippers, 2015-07-01 Deep subsurface microbiology is a highly active and rapidly advancing research field at the interface of microbiology and the geosciences it focuses on the detection identification quantification cultivation and activity measurements of bacteria archaea and eukaryotes that permeate the subsurface biosphere of deep marine sediments and the basaltic ocean and continental crust The deep subsurface biosphere abounds with uncultured only recently discovered and at best incompletely understood microbial populations In spatial extent and volume Earth's subsurface biosphere is only rivaled by the deep sea water column So far no deep subsurface sediment has been found that is entirely devoid of microbial life microbial cells and DNA remain detectable at sediment depths of more than 1 km microbial life permeates deeply buried hydrocarbon reservoirs and is also found several kilometers down in continental crust aquifers Severe energy limitation either as electron acceptor or donor shortage and scarcity of microbially degradable organic carbon sources are among the evolutionary pressures that have shaped the genomic and physiological repertoire of the deep subsurface biosphere Its biogeochemical role as long term organic carbon repository inorganic electron and energy source and subduction recycling engine continues to be explored by current research at the interface of microbiology geochemistry and biosphere geosphere evolution This Research Topic addresses some of the central research questions about deep subsurface microbiology and biogeochemistry phylogenetic and physiological microbial diversity in the deep subsurface microbial activity and survival strategies in severely energy limited

subsurface habitats microbial activity as reflected in process rates and gene expression patterns biogeographic isolation and connectivity in deep subsurface microbial communities the ecological standing of subsurface biospheres in comparison to the surface biosphere an independently flourishing biosphere or mere survivors that tolerate burial along with organic carbon compounds or a combination of both Advancing these questions on Earth's deep subsurface biosphere redefines the habitat range environmental tolerance activity and diversity of microbial life Inhabiting the Earth Martin Locret-Collet, Simon Springer, Jennifer Mateer, Maleea Acker, 2021-10-25 Over the last several decades scholars and practitioners have progressively acknowledged that we cannot consider cities as the place where nature stops anymore resulting in urban environments being increasingly appreciated and theorized as hybrids between nature and culture entities made of socio ecological processes in constant transformation Spanning the fields of political ecology environmental studies and sociology this new direction in urban theory emerged in concert with global concern for sustainability and environmental justice This volume explores the notion that connecting with nature holds the key to a more progressive and liberatory politics

**Anoxia** Alexander Altenbach, Joan M. Bernhard, Joseph Seckbach, 2011-10-20 ANOXIA defines the lack of free molecular oxygen in an environment In the presence of organic matter anaerobic prokaryotes produce compounds such as free radicals hydrogen sulfide or methane that are typically toxic to aerobes The concomitance of suppressed respiration and presence of toxic substances suggests these habitats are inhospitable to Eukaryota Ecologists sometimes term such environments Death Zones This book presents however a collection of remarkable adaptations to anoxia observed in Eukaryotes such as protists animals plants and fungi Case studies provide evidence for controlled beneficial use of anoxia by for example modification of free radicals use of alternative electron donors for anaerobic metabolic pathways and employment of anaerobic symbionts The complex interwoven existence of oxic and anoxic conditions in space and time is also highlighted as is the idea that eukaryotic inhabitation of anoxic habitats was established early in Earth history **Dissertation Abstracts International**

covering all aspects of GHGs sources sinks and control mitigation strategies This book is also written in simple language with helpful photographs diagrams and flowcharts which will make the reader comfortable in understanding the concepts a more relatively easier way The book is a valuable tool for students in Environmental Science Ecology Biological Science Economics and Agriculture It is unique to environmental consultants researchers and other professionals involved in climate change studies Non governmental organizations NGO s
