Evolutionary Image Analysis and Signal Processing Stefano Cagnoni, 2009-07-09 The publication of this book on evolutionary Image Analysis and Signal Processing IASP has two main goals The first occasional one is to celebrate the 10th edition of EvoIASP the workshop which has been the only event specifically dedicated to this topic since 1999 The second more important one is to give an overview of the opportunities offered by Evolutionary Computation EC techniques to computer vision pattern recognition and image and signal processing It is not possible to celebrate EvoIASP properly without acknowledging EvoNET the EU funded network of excellence which has made it possible for Europe to build a strong European research community on EC Thanks to the success of the first pioneering event organized by EvoNET held in 1998 in Paris it was possible to realize that not only was EC a fertile ground for basic research but also there were several application fields to which EC techniques could offer a valuable contribution That was how the idea of creating a single event EvoWorkshops out of a collection of workshops dedicated to applications of EC was born Amongst the possible application fields for EC IASP was selected almost accidentally due to the occasional presence within EvoNET of less than a handful of researchers who were interested in it I would lie if I stated that the event was a great success since its very start but it was successful enough to survive healthily for a couple of years before reaching its present size relevance and popularity

Newsletter - President's Council on Physical Fitness and Sports President's Council on Physical Fitness and Sports (U.S.), 1969 *Ethics and Governance of Public Health Information* Stephen Holland, 2019-10-04 The ethics and governance of health information is a major contemporary problem The central dilemma is between the social utility gained by exploiting health data for public health purposes and privacy

concerns about collecting and using personal information There is a discernible tendency in our digital age to prioritise privacy protection over social utility which results in increasingly restrictive regulation of data including health data This book defends public health from this distinctive threat The book starts with a comprehensive taxonomy of public health information including a novel take on the notoriously vexed research practice distinction and a discussion of the best governance arrangements for all public health information Privacy is clearly central to this so the concept of privacy is analysed to clarify the sort of privacy concerns relevant to public health information This reveals that risks and harms associated with identifiable data are overstated for example when all public health data are assumed to be equally dangerous Conversely resources to manage privacy concerns about public health information are systematically understated For one thing public health should continue its traditional reliance on anonymization to protect individual privacy despite increasingly sophisticated re identification techniques Also the requirement to gain consent from individuals to use their information is offset by a duty to provide personal data for the sake of public health In the same vein the book ends with a discussion of trust arguing that there are underemployed ways of increasing public trust in the institutions responsible for managing public health data
