*The Lobster, Its Life Cycle* Herb Taylor, 1975 Text and illustrations introduce the physical characteristics habits and life cycle of the lobster    The Lobster ,1975    **Biology of the Lobster** Jan Robert Factor, 1995-10-17 Contributors Preface Introduction Anatomy and Life History J R Factor Taxonomy and Evolution A B Williams Larval and Postlarval Ecology G P Ennis Postlarval Juvenile Adolescent and Adult Ecology P Lawton and K L Lavalli Fishery Regulations and Methods R J Miller Populations Fisheries and Management M J Fogarty Interface of Ecology Behavior and Fisheries J S Cobb Aquaculture D E Aiken and S L Waddy Reproduction and Embryonic Development P Talbot and Simone Helluy Control of Growth and Reproduction S L Waddy D E Aiken and D P V de Kleijn Neurobiology and Neuroendocrinology B Beltz Muscles and Their Innervation C K Govind Behavior and Sensory Biology J Atema and R Voigt The Feeding Appendages K L Lavalli and J R Factor The Digestive system J R Factor Digestive Physiology and Nutrition D E Conklin Circulation the Blood and Disease G G Martin and J E Hose The Phy    Lobsters: Biology, Fisheries and Aquaculture E. V. Radhakrishnan, Bruce F. Phillips, Gopalakrishnan Achamveetil, 2019-11-28 This book is an important addition to the knowledge of lobster research The book complements other books published on lobster research and management as it focuses on Indian lobster fisheries and aquaculture developments where there have been nearly 350 research papers and reports and 19 PhD awards The book has 15 chapters written by international experts covering many aspects of the biology of a number of spiny and slipper lobster species occurring in India and world oceans with maps illustrating global distribution of spiny lobster families genera and species An updated taxonomy and checklist of marine lobsters the status and management of lobster fisheries in India and Indian Ocean Rim countries and a review of aquaculture research in India and other major countries have also been presented The book is timely as the 2nd International Indian Ocean Expedition IIOE is currently underway 2015-2020 50 years after the original IIOE 1959-1965 with some of the original lobster research on the biology and distribution of phyllosoma larvae being undertaken on the plankton samples collected during the first IIOE Many of the chapters are contributed by the authors from Central Marine Fisheries Research Institute CMFRI which has been collecting fishery and biological data on lobsters since 1950 when lobster fishing began on a subsistence scale followed by some industrial fishing for lobsters in different parts of India Unfortunately the development of some of these lobster fisheries was followed by overfishing due to lack of enforcement of regulations The book provides a valuable addition to our knowledge of the biology fisheries and aquaculture of spiny and slipper lobsters    **The Biology of Squat Lobsters** Gary Poore, Shane Ahyong, Joanne Taylor, 2011-12-05 Brings together current thinking on this diverse group of marine decapod crustaceans    *The Last Lobster* Christopher White, 2018-06-05 From the author of Skipjack The Melting World comes a mystery the curious boom in America's beloved lobster industry and its probable crash Maine lobstermen have happened upon a bonanza along their rugged picturesque coast For the past five years the lobster population along the coast of Maine has boomed

resulting in a lobster harvest six times the size of the record catch from the 1980s an event unheard of in fisheries In a detective story scientists and fishermen explore various theories for the glut Leading contenders are a sudden lack of predators and a recent wedge of warming waters which may disrupt the reproductive cycle a consequence of climate change Christopher White s *The Last Lobster* follows three lobster captains Frank Jason and Julie one the few female skippers in Maine as they haul and set thousands of traps Unexpectedly boom may turn to bust as the captains must fight a warming ocean volatile prices and rough weather to keep their livelihood afloat The three captains work longer hours trying to make up in volume what they lack in price As a result there are 3 million lobster traps on the bottom of the Gulf of Maine while Frank Jason and others call for a reduction of traps which may boost prices The Maine lobstering towns are among the first American communities to confront global warming and the survival of the Maine Coast depends upon their efforts It may be an uphill battle to create a sustainable catch as high temperatures are already displacing lobsters northward toward Canadian waters out of reach of American fishermen The last lobster may be just ahead

**Structure and Evolution of Invertebrate Nervous Systems** Andreas Schmidt-Rhaesa,Steffen Harzsch,Günter Purschke,2015-12-17 The nervous system is particularly fascinating for many biologists because it controls animal characteristics such as movement behavior and coordinated thinking Invertebrate neurobiology has traditionally been studied in specific model organisms whilst knowledge of the broad diversity of nervous system architecture and its evolution among metazoan animals has received less attention This is the first major reference work in the field for 50 years bringing together many leading evolutionary neurobiologists to review the most recent research on the structure of invertebrate nervous systems and provide a comprehensive and authoritative overview for a new generation of researchers Presented in full colour throughout Structure and Evolution of Invertebrate Nervous Systems synthesizes and illustrates the numerous new findings that have been made possible with light and electron microscopy These include the recent introduction of new molecular and optical techniques such as immunohistochemical staining of neuron specific antigens and fluorescence in situ hybridization combined with visualization by confocal laser scanning microscopy New approaches to analysing the structure of the nervous system are also included such as micro computational tomography cryo soft X ray tomography and various 3 D visualization techniques The book follows a systematic and phylogenetic structure covering a broad range of taxa interspersed with chapters focusing on selected topics in nervous system functioning which are presented as research highlights and perspectives This comprehensive reference work will be an essential companion for graduate students and researchers alike in the fields of metazoan neurobiology morphology
