**The Evolutionary Biology of Human Female Sexuality** Randy Thornhill, Steven W. Gangestad, 2008-09-25 Research conducted in the last fifteen years has placed in question many of the traditional conclusions scholars have formed about human female sexuality Though conventional wisdom asserts that women's estrus has been evolutionarily lost Randy Thornhill and Steven W Gangestad assert that it is present though concealed Women they propose therefore exhibit two

sexualities each ovulatory cycle estrus and sexuality outside of the estrous phase extended sexuality that possess distinct functions Synthesizing research in behavioral evolution and comparative biology the authors provide a new theoretical framework for understanding the evolution of human female sexuality one that is rooted in female sexuality and phylogeny across all vertebrate animals **Biocomputing 2009** Russ B. Altman,A. Keith Dunker, Lawrence Hunter, 2008-11-28 The Pacific Symposium on Biocomputing PSB 2009 is an international multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance Presentations are rigorously peer reviewed and are published in an archival proceedings volume PSB 2009 will be held on January 5-9 2009 in Kamuela Hawaii Tutorials will be offered prior to the start of the conference PSB 2009 will bring together top researchers from the US the Asian Pacific nations and around the world to exchange research results and address open issues in all aspects of computational biology It is a forum for the presentation of work in databases algorithms interfaces visualization modeling and other computational methods as applied to biological problems with emphasis on applications in data rich areas of molecular biology The PSB has been designed to be responsive to the need for critical mass in sub disciplines within biocomputing For that reason it is the only meeting whose sessions are defined dynamically each year in response to specific proposals PSB sessions are organized by leaders of research in biocomputing s hot topics In this way the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field

**Human Diet and Nutrition in Biocultural Perspective** Tina Moffat, Tracy Prowse, 2010-12-01 There are not many areas that are more rooted in both the biological and social cultural aspects of humankind than diet and nutrition Throughout human history nutrition has been shaped by political economic and cultural forces and in turn access to food and nutrition has altered the course and direction of human societies Using a biocultural approach the contributors to this volume investigate the ways in which food is both an essential resource fundamental to human health and an expression of human culture and society The chapters deal with aspects of diet and human nutrition through space and time and span prehistoric historic and contemporary societies spread over various geographical regions including Europe North America Africa and Asia to highlight how biology and culture are inextricably linked **Current Topics in Complement II** John D.

Lambris, 2012-02-04 Complement has long been regarded as a pivotal effector arm of the innate immune response eliciting important immunoregulatory functions in the context of inflammation and also serving as a vital link between the innate and adaptive immune response In the post genomic era our knowledge of the innate immune system is enriched by findings that point to novel functions that do not strictly correlate with immunological defense and surveillance immune modulation or Inflammation Several studies indicate that complement proteins exert functions that are either more complex than previously thought or go well beyond the innate immune character of the system The advent of high throughput platforms for genome and proteome wide profiling together with the enormous amount of raw genetic information that has accumulated in the

databases have stirred new expectations in biomedical research They have led complementologists to revisit established biological systems such as the complement system from a global and integrative perspective Complement research is now faced with the challenge of trying to integrate isolated biochemical pathways into complex gene and protein regulatory circuits In this respect scientists from around the world convened at the Fourth Aegean Conferences Workshop on Complement Associated Diseases Animal Models and Therapeutics June 10 15 2007 to discuss recent advances in this fast evolving field This volume represents a collection of topics on the novel functions of complement patho physiology protein structures design of complement inhibitors and complement assays discussed during the conference

**Cellular Migration and Formation of Neuronal Connections**, 2013-05-06 The genetic molecular and cellular mechanisms of neural development are essential for understanding evolution and disorders of neural systems Recent advances in genetic molecular and cell biological methods have generated a massive increase in new information but there is a paucity of comprehensive and up to date syntheses references and historical perspectives on this important subject The Comprehensive Developmental Neuroscience series is designed to fill this gap offering the most thorough coverage of this field on the market today and addressing all aspects of how the nervous system and its components develop Particular attention is paid to the effects of abnormal development and on new psychiatric neurological treatments being developed based on our increased understanding of developmental mechanisms Each volume in the series consists of review style articles that average 15 20pp and feature numerous illustrations and full references Volume 2 offers 56 high level articles devoted mainly to Formation of Axons and Dendrites Migration Synaptogenesis Developmental Sequences in the Maturation of Intrinsic and Synapse Driven Patterns Series offers 144 articles for 2904 full color pages addressing ways in which the nervous system and its components develop Features leading experts in various subfields as Section Editors and article Authors All articles peer reviewed by Section Editors to ensure accuracy thoroughness and scholarship Volume 2 sections include coverage of mechanisms which regulate the formation of axons and dendrites cell migration synapse formation and maintenance during development and neural activity from cell intrinsic maturation to early correlated patterns of activity

**Evolutionary Theory: Fringe or Central to Psychological Science** Danielle Sulikowski, 2016-08-08 The computational theory of mind which views the brain as an information processor that operates on cognitive representations is central to modern cognitive psychology and is the dominant perspective from which brain function is conceptualized and studied Evolutionary Psychology EP is the application of evolutionary theory to understanding human behaviour and cognition Unlike other core Psychology topic areas such as Personality Learning or Developmental Psychology however EP is not defined by the subset of psychological phenomena it seeks to describe and understand It is instead defined by a specific meta theoretical perspective from which it seeks to potentially explain all psychological

phenomena The central question posed by this volume is whether this over arching nature provides an opportunity for evolutionary approaches to offer an alternative meta theoretical perspective to the information processing representational view of brain function and behavior
