

applications or engineers because it lacks exercises, problems. There are many exercises, most of them quite straightforward, with answers compiled at the end. This feature doubtless will increase the appeal of the book to readers using it for self-study. The summaries at the ends of the chapters are another good feature. In my opinion, some additional suggestions for outside reading and mathematical report writing would enhance the usefulness of the book as a text.

Karl Patterson Schmidt Anniversary Volume in Honor of His Sixty-fifth Birthday. Fieldiana: Zoology, vol. 37. Chicago Natural History Museum, Chicago, 1955. viii+728 pp. Illus.+plates. \$10.

Appreciative accounts of Karl Patterson Schmidt by his administrative associates are followed in this book by 26 scientific articles, by 27 zoologists, on living and fossil animals from all five continents and several islands. Taxonomy, nomenclature, anatomy, geographic distribution, speciation, food habits, paleontology, and other aspects of vertebrates and invertebrates are dealt with.

In the past 30 years the advancing front of knowledge in taxonomy, phylogeny, and geographic distribution of animals—especially living animals—has lagged behind that in genetics, biochemistry, and microbiology. To consolidate and apply much of the information recently acquired in the last-mentioned fields, and to permit further advances in some of them, more precise knowledge of the taxonomy and natural history of most of the animal groups is now required. Consequently, the information in the Karl Patterson Schmidt volume is timely as well as basic in nature. From it we learn much about the natural relationships among the 80 species of snakes of the genus *Colaparus*, the northward limits of geographic range in Mexico of many neotropical bats, the 42 kinds (23 are new!) of obligate parasitic amblyopine beetles that live on rodents and marsupials; we also learn which of the nominal species of Columbian gallinaceous birds are valid and which are not, what foods are eaten by scores of kinds of fishes, and much about the species of fishes of the genus *Holocentrus* that are arranged according to the heretofore imperfectly known anatomical and functional relationships between the auditory bulla and swim bladder. In addition, we learn that the premaxillary fossa on the lower jaw of the living spectacled bear accommodates a pouch of the mouth cavity and is

not a place of attachment for a separate portion of the chewing musculature as the literature and our professors wrongly taught us about the closely related, extinct *Tremarctotherium*. Prevailing westerly winds acting on migrants account for the American origin of the bird fauna of Tristan de Cunha. Students of paleontology will find in the volume well-illustrated and competently described missing links that make speculations unnecessary concerning the phylogeny of some lines of sea turtles, symmetrodont mammals, early crabs, and Devonian fishlike Heterostrachi that are useful in correlating discontinuous geologic deposits.

The basic nature of the original information in the Karl Patterson Schmidt volume guarantees long-time recognition of the deserved honor that it does him.
