understand that Darwin's theory of evolution, natural selection acting upon random mutations, is a wholly inadequate theory for the creation of a human being. And most people feel unprepared to debate those scientists, professors, and scholars who use their academic authority to defend Darwinism, often bullying and belittling those of us who dare doubt Darwin. Now Bredemeier identifies and succinctly encapsulates why Darwinism fails. Using anatomy and physiology as only a physician can, Bredemeier exposes the errors and false logic that Darwinian acolytes continue to employ as they protect their mortally wounded theory. Any reader with a high school or college education will become armed with straightforward examples of exactly why Darwinism fails. From anatomy and physiology of the human body, including neuroscience, genetics, embryology, and other fascinating fields of the increasingly numerous biological sciences, Bredemeier provides indisputable and damning evidence for which academicians, scientists, and even Nobel laureates who zealously defend Darwinism have no adequate answer.

That's Disgusting: Unraveling the Mysteries of Repulsion Rachel Herz, 2012-01-23 Disgust originated to prevent humans from eating poisonous food, but this simple safety mechanism has since evolved into a uniquely human emotion that dictates how people treat others, shapes cultural norms, and even has implications for mental and physical health. This book illuminates the science behind disgust, tackling such colorful topics as cannibalism, humor, and pornography to address larger questions including why sources of disgust vary among people and societies and how disgust influences individual personalities, daily lives, and values. It turns out that disgust underlies more than we realize, from political ideologies to the lure of horror movies.

The Mother-Infant Nexus in Anthropology Rebecca Gowland, Siân Halcrow, 2019-10-25 Over the past 20 years, there has been increased research traction in the anthropology of childhood. However, infancy, the pregnant body, and motherhood continue to be marginalised. This book will focus on the mother-infant relationship and the variable constructions of this dyad across cultures, including conceptualisations of the pregnant body, the beginnings of life, and implications for health. This is particularly topical because there is a burgeoning awareness within anthropology regarding the centrality of mother-infant interactions for understanding the evolution of our species, infant and maternal health, and care strategies, epigenetic change, and biological and social development. This book will bring together cultural and biological anthropologists and archaeologists to examine the infant-maternal interface in past societies. It will showcase innovative theoretical and methodological approaches towards understanding societal constructions of foetal, infant, and maternal bodies. It will emphasise their interconnectivity and will explore the broader significance of the mother-infant nexus for overall population well-being.

Care or Neglect? Laszlo Bartosiewicz, Erika Gal, 2018-02-28 Animals have always been integral to culture. Their interaction with humans has intensified since the onset of domestication, resulting in higher incidences of animal disease due to human intervention. At the same time, human care has counterbalanced pressures of natural selection, reducing morbidity.
