Hitzler, Md Kamruzzaman Sarker, Aaron Eberhart, 2023-08-04 If only it were possible to develop automated and trainable neural systems that could justify their behavior in a way that could be interpreted by humans like a symbolic system. The field of Neurosymbolic AI aims to combine two disparate approaches to AI: symbolic reasoning and neural or connectionist approaches such as Deep Learning. The quest to unite these two types of AI has led to the development of many innovative techniques which extend the boundaries of both disciplines. This book, *Compendium of Neurosymbolic Artificial Intelligence*, presents 30 invited papers which explore various approaches to defining and developing a successful system to combine these two methods. Each strategy has clear advantages and disadvantages, with the aim of most being to find some useful middle ground between the rigid transparency of symbolic systems and the more flexible yet highly opaque neural applications. The papers are organized by theme, with the first four being overviews or surveys of the field. These are followed by papers covering neurosymbolic reasoning, neurosymbolic architectures, various aspects of Deep Learning, and finally two chapters on natural language processing. All papers were reviewed internally before publication. The book is intended to follow and extend the work of the previous book, *Neurosymbolic artificial intelligence: The state of the art* (IOS Press, 2021), which laid out the breadth of the field at that time. Neurosymbolic AI is a young field which is still being actively defined and explored, and this book will be of interest to those working in AI research and development. Who Listens? Assistant Professor of Music Theory Janet Bourne, Janet Bourne, 2025 Chapter 1 describes how the cognitive process of analogy can be used as a framework for analyzing how individual listeners relate what they are hearing to what they may have heard or learned in musical and other experiences in the past The framework emphasizes the cognitive steps a person takes when making an analogy of any kind 1 retrieval remembering patterns and associations based on experience 2 mapping aligning situations and 3 inference transfer transferring inferences associations recognizing manipulations I use this process to analyze hearings of Western art music illustrating not only how listeners might analogize music to other domains such as the body or language as a framing analogy for their listening experience but also how they might analogize details of the music they are currently hearing to music they have heard in the past creating what I call music to music analogies
