Hospital Acquired Infection In The Pediatric Patient:

Hospital-acquired Infection in the Pediatric Patient Leigh B. Grossman, 1988 *Healthcare-Associated Infections in Children* J. Chase McNeil, Judith R. Campbell, Jonathan D. Crews, 2018-10-30

With advances in technology and medical science children with previously untreatable and often fatal conditions such as congenital heart disease extreme prematurity and pediatric malignancy are living longer While this is a tremendous achievement pediatric providers are now more commonly facing challenges in these medical complex children both as a consequence of their underlying disease and the delivery of medical care The term healthcare associated infections HAIs encompass both infections that occur in the hospital and those that occur as a consequence of healthcare exposure and medical complexity in the outpatient setting HAIs are associated with substantial morbidity and mortality for the individual patient as well as seriously taxing the healthcare system as a whole In studies from the early 2000s over 11% of all children in pediatric intensive care units develop HAIs and this figure increases substantially if neonatal intensive care units are considered While progress has been made in decreasing the rates of HAI in the hospital these infections remain a major burden on the medical system In a study published in 2013 the annual estimated costs of the five most common HAIs in the United States totaled 9.8 billion An estimated 648 000 patients developed HAIs in hospitals within the US in 2011 and children with healthcare associated bloodstream infection have a greater than three fold increased risk of death While a number of texts discuss HAIs in the broader context of infectious diseases or pediatric infectious diseases such as Mandell's Principles and Practice of Infectious Diseases or Long and Pickering's Principles and Practice of Pediatric Infectious Diseases no single text specifically focuses on the epidemiology diagnosis and management of HAI in children Many infectious diseases texts are organized based on the microbiology of infection and from this starting point then discussing the clinical syndromes associated with the organism of interest For instance a chapter on *Staphylococcus aureus* may contain a brief discussion of the role of *S. aureus* in surgical site infections in the wider context of all staphylococcal disease For clinicians caring for children at the bedside however the clinical syndrome is typically appreciated and intervention necessary prior to organism identification We propose a text that details both the general principles involved in HAIs and infection prevention but also provides a problem oriented approach Such a text would be of interest to intensivists neonatologists hospitalists oncologists infection preventionists and infectious diseases specialists The proposed text will be divided into three principle sections 1 Basic Principles of Infection Control and Prevention 2 Major Infectious Syndromes and 3 Infections in Vulnerable Hosts Chapters in the Major Infectious Syndromes section will include discussion of the epidemiology microbiology clinical features diagnosis medical management or surgical management as appropriate and prevention of the disease entity of interest Chapters will seek to be evidenced based as much as possible drawing from the published medical literature as well as from clinical practice guidelines such as those from the Infectious Diseases Society of America when applicable We intend to include tables figures and algorithms as

appropriate to assist clinicians in the evaluation and management of these often complex patients Finally we intend to invite authors to participate in this project from across a number of medical specialties including infectious diseases infection control critical care oncology and surgery to provide a multidisciplinary understanding of disease It is our intent to have many chapters be co written by individuals in different subspecialties for instance a chapter on ventilator associated pneumonia may be co written by both infectious disease and critical care medicine specialists Such a unique text has the potential to provide important guidance for clinicians caring for these often fragile children Molecular Techniques for the Study of Hospital Acquired Infection Steven L. Foley, Anne Y. Chen, Shabbir Simjee, Marcus J. Zervos, 2011-08-04 Providing a broad overview of the microbial pathogens associated with hospital acquired human illness Techniques for the Study of Hospital Acquired Infection examines the cost effective use of laboratory techniques in nosocomial infectious disease epidemiology and control This concise guide addresses the cost benefits of combining modern molecular techniques with the traditional activities of infection control departments The book is useful as a guide to hospital infection control programs as well as a text for medical practitioners grad medical students researcher scientists population biologists molecular biologists and microbiologists Hospital Epidemiology and Infection Control C. Glen Mayhall, 2012-02-20 Thoroughly revised and updated for its Fourth Edition this highly acclaimed volume is the most comprehensive reference on hospital epidemiology and infection control Written by over 150 leading experts this new edition examines every type of hospital acquired nosocomial infection and addresses every issue relating to surveillance prevention and control of these infections in patients and in healthcare workers This new edition features new or significantly increased coverage of emerging infectious diseases avian influenza governmental regulation of infection control and payment practices related to hospital acquired infections molecular epidemiology the increasing prevalence of community acquired MRSA in healthcare facilities system wide infection control provisions for healthcare systems hospital infection control issues following natural disasters and antimicrobial stewardship in reducing the development of antimicrobial resistant organisms **Infectious Diseases in the Pediatric Intensive Care Unit** Simon Nadel, 2011-09-14 Infants and children are at high risk of acquiring infections and this is most critical on the pediatric intensive care unit as these infections have serious effects on mortality Infectious Diseases in the Pediatric Intensive Care Unit is the first to provide a thorough review of this most important area of intensive care medicine with an emphasis on evidence based medicine *Epidemic of Medical Errors and Hospital-Acquired Infections* William Charney, 2012-02-06 This book explores the issues surrounding medical errors and examines the science behind possible solutions It creates a more efficient dialogue that will produce a more systemic targeting of the causes of medical errors and HAIs The author elucidates the problems including the complex issues of money and ethics He uses statistical data to build the case for systemic change and re confirms that millions of procedures done without error is as an important measuring figure as are the numbers of mistakes Safety and Reliability in Pediatrics, An Issue of Pediatric Clinics Brian

Jacobs, Max J. Coppes, 2012-12-28 The Guest Editors have assembled an international list of top experts to present the most current information to pediatricians about patient safety The issue has a primarily clinical focus with a few articles addressing the business and practice of patient safety Articles are devoted to the following topics Developing performance standards and expectations for safety The role of CPOE in patient safety The role of smart infusion pumps on patient safety Abstracted detection of adverse events in children The role of effective communication including handoffs in patient safety Reducing mortality resulting from adverse events Optimizing standardization of case reviews morbidity and mortality rounds to promote patient safety Impact of resident duty work hours on patient safety Role of simulation in safety The role of diagnostic errors in patient safety The role of collaborative efforts to reduce hospital acquired conditions Patient safety in ambulatory care Role of FDA and pediatric safety and Patient safety through the eyes of a parent *Mayhall's Hospital Epidemiology and Infection Prevention* David Weber, Tom Talbot, 2020-10-27 The fifth edition of Mayhall's Hospital Epidemiology and Infection Prevention has a new streamlined focus with new editors and contributors a new two color format and a new title Continuing the legacy of excellence established by Dr C Glen Mayhall this thoroughly revised text covers all aspects of healthcare associated infections and their prevention and remains the most comprehensive reference available in this complex field It examines every type of healthcare associated nosocomial infection and addresses every issue relating to surveillance prevention and control of these infections in patients and in healthcare personnel providing unparalleled coverage for hospital epidemiologists and infectious disease specialists **Hospital-acquired Infections** Julia B. Wilcox, 2009 Hospital acquired infections HAIs also known as health care associated infections encompass almost all clinically evident infections that do not originate from a patient's original admitting diagnosis Within hours after admission a patient's flora begins to acquire characteristics of the surrounding bacterial pool Most infections that become clinically evident after 48 hours of hospitalization are considered hospital acquired Infections that occur after the patient's discharge from the hospital can be considered to have a nosocomial origin if the organisms were acquired during the hospital stay This new book presents a set of reports detailing the depth of the problems as well as suggesting remedies **Comprehensive Pediatric Hospital Medicine** Lisa B. Zaoutis, Vincent W. Chiang, 2007-01-01 This new comprehensive reference not only brings readers the most up to date evidence based approaches to hospital based pediatric care but also covers issues related to staffing a unit financial legal and ethical practices and how to maintain effective communication between referring providers and consulting staff *Pediatric Acute Care* Beth Nachtsheim Bolick, Karin Reuter-Rice, Maureen A.
