## **Household Consequences Of High Fertility In Pakistan:**

**Household Consequences of High Fertility in Pakistan** Susan Hill Cochrane, Valerie Kozel, Harold Alderman, 1990  
The theory and evidence of the consequences of high fertility in Pakistan are reviewed in this paper. Several data sets are analyzed to examine the effects of the number of children on school participation and labor participation in urban Pakistan. Other data are utilized to examine the effects of children on savings in urban and rural areas. Results show that the number of children negatively affects the schooling of girls but not boys. The number of boys and girls in the household have differential effects on women's labor participation while female children but not males affect adult male's participation. Children ages 6-15 have negative effects on rural savings but less effect in urban areas. In general, the effects of high fertility for households in Pakistan seem more negative than in many countries. This may explain the high proportion of women who say they want no more children. Why so few of these women use contraception is more difficult to explain. Author **The Impact of Population Growth on Well-being in Developing Countries** Dennis A. Ahlburg, Allen C. Kelley, Karen Oppenheim Mason, 2013-03-14 This book examines the nature and significance of the impact of population growth on the well-being of developing countries, in particular the effects on economic growth, education, health, food supply, housing, poverty, and the environment. In addition, because family planning programmes often significantly affect population growth, the study examines the impacts of family planning on fertility and health and the human rights implications of family planning programmes. In considering the book's conclusions about the impact of population growth on development, four caveats should be noted. First, the effects of population growth vary from place to place and over time. Thus, blanket statements about overall effects often cannot be made. Where possible, the authors note the contexts in which population effects are strongest and weakest. Second, all of the outcomes examined in this book are influenced by factors other than population growth. Moreover, the impact of population growth may itself vary according to the presence or absence of other factors. This again makes blanket statements about the effects of population growth difficult. Throughout the chapters, the authors try to identify other relevant factors that influence the outcomes we discuss or that influence the impact of population growth on those outcomes. By the Sweat and Toil of Children: An economic consideration of child labor, 1994 **Population and Poverty in the Developing World** Massimo Livi-Bacci, Gustavo De Santis, 1999-04-01 The increasing gap between developed and developing world will be one of the most important themes of the 21st century. The contributions contained in this volume take a multidisciplinary approach to the problem, offering a comprehensive review of the theoretical issues and empirical findings that relate to the complex and multidirectional link between poverty and demographic behaviours and outcomes in the contemporary developing world. The starting point of the volume is an exact definition of poverty. The contributors go on to analyse in detail its causes and effects both at the micro and macro level, concentrating on those factors and consequences which relate more directly to the demographic sphere. Population growth, household structure, and

labour fertility AIDS urbanization migration and mortality are amongst the areas covered with the major themes discussed and elaborated in an introductory overview chapter

**Population and Poverty** Naunihal Singh, 2002 **Uganda**, 1993 Assesses Uganda's urgent social problems lack of education poor health and high population growth and means for alleviating them This study concludes that if Uganda's social conditions among the world's worst are to improve social spending must be both increased and better allocated Three areas are considered critical Education Although the great majority of children enter primary school by secondary school enrollment drops to only 13 percent overall and to 7 percent for girls This dropout rate is largely attributed to high fees and poor learning conditions The study recommends expanding access to primary education by restructuring government expenditure and private spending Health Uganda's infant mortality is 70 percent higher than the average among low income countries and its death rate is double the average Because the leading causes of illness and death are preventable albeit sometimes with great difficulty the study recommends that health policy be reoriented toward public health and prevention Family planning Given that up to 70 percent of women have a favorable attitude toward family planning the study recommends that the urgent problem of high fertility be immediately addressed by making family planning services widely available The report stresses that government policies should take into account the interrelationships among social problems for example the correlation of low female education to high fertility infant mortality and child malnutrition All Our People

, **Resources in education**, 1991 **The Information Technology Revolution and Economic Development** Nagy Hanna, 1991 Information is a major development resource joining the ranks with human natural and financial resources Therefore development agencies must understand the role of information and information technologies informatics in the developing countries to respond to a rapidly evolving global environment The ongoing information explosion in the industrialized economies contrasts sharply with the information poverty of developing countries This poverty takes many forms including poor information support for macroeconomic and sectoral policy formulation and implementation limited access to information for rural populations and isolation of researchers and professionals from international research findings and so on Informatics applications offers new ways to make the most of the managerial and institutional resources of developing countries with the most widespread benefits likely to come from applying it to priority sectors Governments are recognizing their roles as information providers and users facilitators of information technology diffusion and providers of information and communication infrastructures as well as their role in setting policies for informatics During the 1990s the impact of information technology will be felt increasingly Developing countries at all levels of development must stay abreast of the information revolution they cannot afford to ignore this second industrial revolution *Hard At Work In Factories And Mines* Carolyn Tuttle, 2021-11-28 Children have worked for centuries and continue to work The history of the economic

development of Europe and North America includes numerous instances of child labor. Manufacturers in England, France, Belgium, Germany, and Prussia, as well as the United States, used child labor during the initial stages of industrialization. In addition, child labor prevails currently in many industries in the Third World. This book examines the explanations for child labor in an economic context. A model of the labor market for children is constructed using the new economics of the family framework to derive the supply of child labor and the traditional labor theory of marginal productivity to derive the demand for child labor. The model is placed into a historical context and is used to test the existing supply and demand induced explanations for an increase in child labor during the British Industrial Revolution. Evidence on the extent of children's employment, their specific tasks, and trends in their wages from the textile industry and mining industry is used to support the argument that it was technological innovation which created a demand for child labor. Certain mechanical inventions and process innovations increased the demand for child labor in three ways: increasing number of assistants needed, increasing the substitutability between children and adults, and creating work situations that only children could fill. Specific innovations in the production of textiles and in the extraction of coal, copper, and tin are highlighted to show how they favored the use of child workers over adult workers. The book concludes with a look at the current situations in developing countries where child labor is prevalent. Considerable insight is gained on the role of child labor in economic development when this historical model is applied to the contemporary situation.

*Child Labour in South Asia* Kishor Sharma, 2016-04-15 Child labour is a serious and contentious issue throughout the developing world and it continues to be a problem whose form and very meaning shifts with social, geographical, economic, and cultural context. While the debate about child labour practice in developing countries appears to be motivated by growing competition in labour intensive products brought about by globalization, studies on this issue are both sparse and lopsided. This important book aims to shed light on this debate by documenting the experience of South Asian developing countries which have experienced rapid income and export growth. Based on evidence from Bangladesh, India, Nepal, Pakistan, and Sri Lanka, this volume aims to improve our understanding about the link between trade growth and child labour practices, as well as management of child labour in developing countries.

**child labor**, 1998      **World Bank Policy Research Bulletin** World Bank, 1991      **Chronic Poverty In Asia: Causes, Consequences And Policies** John Malcolm Dowling, Chin-fang Yap, 2009-10-14 Asia contains the bulk of the world's poor as many as 500 million people. A significant fraction of these poor are chronically poor, which means that they and their families have been poor for years and will remain in poverty unless governmental policies are adopted which can lift them out of poverty. This book focuses on rural poverty and those countries in Asia with the largest number of chronically poor, including the two emerging superpowers of China and India, other countries of South Asia, and the Mekong region, as well as Indonesia and Philippines in Southeast Asia. Systematic analysis of who is poor, where they live, and why they are poor is carried out.

Microeconomic sector and macroeconomic policies which have been adopted to address this important social issue are also discussed Through specific country analysis the book outlines additional concrete measures that can be taken to reduce chronic poverty and improve the welfare of these people      Inscribing South Asian Muslim Women Tahera Aftab,2008 Offers an annotated source for the study of the public and private lives of South Asian Muslim women      Beyond the Numbers Laurie Ann Mazur,2013-04-16 Beyond the Numbers presents a thought provoking series of essays by leading authorities on issues of population and consumption The essays both define the poles of debate and explore common ground beyond the polarized rhetoric Specific chapters consider each of the broad topics addressed at the International Conference on Population and Development held in September 1994 in Cairo Egypt The essays are supplemented by sidebars and short articles featuring more impassioned voices that highlight issues of interest not fully explored in the overviews As well as providing a sense of the difficulties involved in dealing with these issues the essays make clear that constructive action is possible Topics covered include the interrelationships between population economic growth consumption and development the history of population and family planning efforts gender equality and the empowerment of women reproductive rights reproductive health family planning health and mortality      Letting Girls Learn ,1991-01-01 This paper analyzes the benefits from female education who gains and in what ways and the constraints direct and opportunity costs reflecting economics and tradition It then outlines promising approaches for increasing female education The demand for female education can be strengthened gradually through economic and sectoral policies that increase the returns But this paper focuses on education policies many of which could be adopted now to lower the costs improve the quality and increase access to education in ways that will allow more girls to attend school It reports evidence of effectiveness and gives examples particularly from projects involving the World Bank Especially in poor countries projects succeed best when they include a package approach to address what are typically multiple and powerful constraints to female education The paper calls for increased monitoring and testing the cost effectiveness of the kind of innovative packages now being tried in several developing countries
