Housing And Neighborhood Dynamics A Simulation Study Harvard Economic Studies:

Housing and Neighborhood Dynamics John F. Kain, William C. Apgar, 1985 This book assesses the effects of spatially concentrated programs for housing and neighborhood improvement These programs provide direct assistance to low income property owners in an attempt to arrest neighborhood decline and encourage revitalization The authors used the Harvard Urban Development Simulation Model HUDS in evaluating these programs HUDS a large scale computer model represents the process of housing rehabilitation the production and consumption of housing services household moving decisions and other determinant of neighborhood change The model simulates the behavior of approximately 80 000 individual households in two hundred residential neighborhoods of various quality levels Unlike more aggregate models of urban development HUDS has the capacity to identify how specific housing policies affect individual households as well as particular neighborhoods Since program evaluations are no better than the models on which they are based the authors provide sufficient detail to permit those readers primarily interested in the policy analysis to assess the methodology and to understand how the policies are represented in the model a more technical discussion of the model is then presented in appendixes Although the simulations focus on policies that induce central city property owners to upgrade their properties and thus stimulate revitalization many of the authors findings are relevant to larger issues of urban development For example the analysis of how housing rehabilitation subsidies affect the investment behavior of nonsubsidized property owners provides insights about the link between initial upgrading and sustained neighborhood improvement The analysis also demonstrates how differences in location household and housing stock characteristics affect a particular neighborhood s responsiveness to a common policy initiative *Journal of Housing Research* ,1993 Household Choice and Urban Structure Paul A. Waddell, 2018-08-10 Published in 1997 The aim of this book is to explore urban modelling traditions identify key limitations and contributions and to develop a more general model within a discrete choice framework The scope of the effort is on household choices regarding residential location workplace and housing tenure It is the first systematic effort to analyze the structure and sequence of the choices made by households regarding residential location and workplace The implications for urban theory model development and policy analysis are substantial **Handbook of Regional and** Peter Nijkamp, Edwin S. Mills, 1986 This second volume of the Handbook presents professional surveys of all the important topics in urban economics The first section contains 6 surveys on locational analysis the second 5 surveys of specific urban markets and the third part presents 5 surveys of government policy issues The book brings together exhaustive research by distinguished scholars from many countries It is the only complete survey volume of urban economics and should serve as a reference volume to scholars and graduate students for many years For more information on the Handbooks in Economics series please see our home page on <http://www.elsevier.nl/locate/hes> **Journal of Economic Literature** ,1986 *The Oxford Handbook of Economic Geography* Gordon L. Microeconomic Models of Housing Markets Konrad Stahl,2012-12-06 The present volume is an outgrowth of several years interactions between U S American and W German economists interested in analyzing the structure and functioning of housing markets and the impacts of government policies on these markets Such an interaction turns out to be fruitful in several respects Unquestionably German economists can learn a lot from the high level of sophistication exhibited in much of the American literature However this is not a one way road of learning and the adoption of concepts for the following reason Most of the analysis presented in that literature hinges on the use of the standard microeconomics textbook tools Now even a casual observation of housing markets in European countries reveals that behavior and conduct in these markets do not follow the assumptions presumed in this mode of analysis which calls into question the uncritical employment of that tool kit This has important consequences for policy analysis and indeed for some principal attitudes towards housing policy and points sharply to the need for developing analytical concepts that take up more of the peculiarities of housing market behavior and conduct While such a development may be particularly warranted in view of European housing markets we maintain this to be the case in view of the American housing market as well
