

## Generalized Eigenvectors and Jordan Form

We have seen that an  $n \times n$  matrix  $A$  is diagonalizable precisely when the dimensions of its eigenspaces sum to  $n$ . So if  $A$  is not diagonalizable, there is at least one eigenvalue with a geometric multiplicity (dimension of its eigenspace) which is strictly less than its algebraic multiplicity. In this handout, we will discuss how one can make up for this deficiency of eigenvectors by finding what are called generalized eigenvectors, which can in turn be used to find the Jordan form of the matrix  $A$ .

First consider the following non-diagonalizable system.

**Example 1.** ◊ The matrix

$$A = \begin{bmatrix} 3 & 1 \\ 0 & 3 \end{bmatrix}$$

has characteristic polynomial  $(\lambda - 3)^2$ , so it has only one eigenvalue  $\lambda = 3$ , and the corresponding eigenspace is  $E_3 = \text{span} \left( \begin{bmatrix} 1 \\ 0 \end{bmatrix} \right)$ . Since  $\dim(E_3) = 1 < 3$ , the matrix  $A$  is not diagonalizable. Nevertheless, it is still possible to solve the system

$$\frac{d\mathbf{y}}{dt} = A\mathbf{y}$$

without much difficulty. Writing out the two equations

$$\begin{aligned}\frac{dy_1}{dt} &= 3y_1 + y_2 \\ \frac{dy_2}{dt} &= 3y_2\end{aligned}$$

we see that the second equation has general solution  $y_2 = c_1 e^{3t}$ . Plugging this into the first equation gives

$$\frac{dy_1}{dt} = 3y_1 + c_1 e^{3t}$$

This is a first order linear equation that can be solved by the method of integrating factors. Its solution is  $y_1 = c_1 t e^{3t} + c_2 e^{3t}$ . Thus the general solution of the system is

$$\mathbf{y} = \begin{bmatrix} y_1 \\ y_2 \end{bmatrix} = \begin{bmatrix} c_1 t e^{3t} + c_2 e^{3t} \\ c_2 e^{3t} \end{bmatrix} = c_1 e^{3t} \left( t \begin{bmatrix} 1 \\ 0 \end{bmatrix} + \begin{bmatrix} 0 \\ 1 \end{bmatrix} \right) + c_2 e^{3t} \begin{bmatrix} 1 \\ 0 \end{bmatrix}$$

◊

The matrix  $A$  in the previous example is said to be in **Jordan form**.

**Definition 1.** A  $2 \times 2$  matrix of the form

$$J = \begin{bmatrix} \lambda & 1 \\ 0 & \lambda \end{bmatrix}$$

for some number  $\lambda$  is called a **Jordan form matrix**.

**Jordan Decompositions of Generalised Vector Measures** Klaus D. Schmidt, 1989      [Convergence Theorems for Lattice Group-Valued Measures](#) Antonio Boccuto, Xenofon Dimitriou, 2015-04-06 Convergence Theorems for Lattice Group valued Measures explains limit and boundedness theorems for measures taking values in abstract structures. The book begins with a historical survey about these topics since the beginning of the last century moving on to basic notions and preliminaries on filters, ideals, lattice groups, measures and tools which are featured in the rest of this text. Readers will also find a survey on recent classical results about limit, boundedness and extension theorems for lattice group valued measures followed by information about recent developments on these kinds of theorems and several results in the setting of filter ideal convergence. In addition each chapter has a general description of the topics and an appendix on random variables, concepts and lattices is also provided. Thus readers will benefit from this book through an easy to read historical survey about all the problems on convergence and boundedness theorems and the techniques and tools which are used to prove the main results. The book serves as a primer for undergraduate, postgraduate and Ph.D. students on mathematical lattice and topological groups and filters and a treatise for expert researchers who aim to extend their knowledge base.

**Vector Measures** Joseph Diestel, John Jerry Uhl, 1977-06-01 In this survey the authors endeavor to give a comprehensive examination of the theory of measures having values in Banach spaces. The interplay between topological and geometric properties of Banach spaces and the properties of measures having values in Banach spaces is the unifying theme. The first chapter deals with countably additive vector measures, finitely additive vector measures, the Orlicz-Pettis theorem and its relatives. Chapter II concentrates on measurable vector valued functions and the Bochner integral. Chapter III begins the study of the interplay among the Radon-Nikodym theorem for vector measures, operators on  $L_1$  and topological properties of Banach spaces. A variety of applications is given in the next chapter. Chapter V deals with martingales of Bochner integrable functions and their relation to dentable subsets of Banach spaces. Chapter VI is devoted to a measure theoretic study of weakly compact, absolutely summing and nuclear operators on spaces of continuous functions. In Chapter VII a detailed study of the geometry of Banach spaces with the Radon-Nikodym property is given. The next chapter deals with the use of Radon-Nikodym theorems in the study of tensor products of Banach spaces. The last chapter concludes the survey with a discussion of the Liapounoff convexity theorem and other geometric properties of the range of a vector measure. Accompanying each chapter is an extensive survey of the literature and open problems.

**Handbook of Measure Theory** E. Pap, 2002-10-31 The main goal of this Handbook is to survey measure theory with its many different branches and its relations with other areas of mathematics. Mostly aggregating many classical branches of measure theory, the aim of the Handbook is also to cover new fields, approaches and applications which support the idea of measure in a wider sense e.g. the ninth part of the Handbook. Although chapters are written of surveys in the various areas they contain many special topics and challenging problems.

valuable for experts and rich sources of inspiration Mathematicians from other areas as well as physicists computer scientists engineers and econometrists will find useful results and powerful methods for their research The reader may find in the Handbook many close relations to other mathematical areas real analysis probability theory statistics ergodic theory functional analysis potential theory topology set theory geometry differential equations optimization variational analysis decision making and others The Handbook is a rich source of relevant references to articles books and lecture notes and it contains for the reader's convenience an extensive subject and author index

Butnariu, Erich Peter Klement, 2013-03-09 This book aims to present in a unified approach a series of mathematical results concerning triangular norm based measures and a class of cooperative games with fuzzy coalitions Our approach intends to emphasize that triangular norm based measures are powerful tools in exploring the coalitional behaviour in such games They not only simplify some technical aspects of the already classical axiomatic theory of Aumann Shapley values but also provide new perspectives and insights into these results Moreover this machinery allows us to obtain in the game theoretical context new and heuristically meaningful information which has a significant impact on balancedness and equilibria analysis in a cooperative environment From a formal point of view triangular norm based measures are valuations on subsets of a unit cube  $0 \leq X$  which preserve dual binary operations induced by triangular norms on the unit interval  $0 \leq 1$  Triangular norms and their dual conorms are algebraic operations on  $0 \leq 1$  which were suggested by MENGER 1942 and which proved to be useful in the theory of probabilistic metric spaces see also WALD 1943 The idea of a triangular norm based measure was implicitly used under various names vector integrals DVORETZKY WALD WOLFOWITZ 1951 probabilities of fuzzy events ZADEH 1968 and measures on ideal sets AUMANN SHAPLEY 1974 p 152
