Hospital-acquired Infections Julia B. Wilcox, 2009 Hospital acquired infections HAIs also known as health care associated infections encompass almost all clinically evident infections that do not originate from a patient's original admitting diagnosis. Within hours after admission a patient's flora begins to acquire characteristics of the surrounding bacterial pool. Most infections that become clinically evident after 48 hours of hospitalization are considered hospital acquired. Infections that occur after the patient's discharge from the hospital can be considered to have a nosocomial origin if the organisms were acquired during the hospital stay. This new book presents a set of reports detailing the depth of the problems as well as suggesting remedies.

Infection Prevention and Control in the Hospital, An Issue of Infectious Disease Clinics Keith S. Kaye, 2011-03-28 Over the past several decades infection control has become a rapidly growing multidisciplinary field of incredible importance with regard to the safety of patients and healthcare workers regulation and accreditation of healthcare facilities and finances. The focus of this field has increasingly turned to prevention rather than control of hospital acquired infections. This issue will bring the infectious disease specialist up to date on important topics such as hand hygiene sterilization methicillin resistant Staphylococcus aureus antibiotic stewardship and specific infections of particular concern.

Preventing Hospital Infections Jennifer Meddings, Sanjay Saint, Vineet. Chopra, 2021 Preventing Hospital Infections Second Edition offers a step by step description of a quality improvement intervention as it might unfold in a model hospital with practical guidance and newly updated topics including antimicrobial stewardship and tiered approaches to CAUTI CLABSI and CDI

Healthcare-Associated Infections in Children J. Chase McNeil, Judith R. Campbell, Jonathan D. Crews, 2018-10-30 With advances in technology and medical science children with previously untreatable and often fatal conditions such as congenital heart disease extreme prematurity and pediatric malignancy are living longer. While this is a tremendous achievement pediatric providers are now more commonly facing challenges in these medical complex children both as a consequence of their underlying disease and the delivery of medical care. The term healthcare associated infections HAIs encompass both infections that occur in the hospital and those that occur as a consequence of healthcare exposure and medical complexity in the outpatient setting. HAIs are associated with substantial morbidity and mortality for the individual patient as well as seriously taxing the healthcare system as a whole. In studies from the early 2000s over 11% of all children in pediatric intensive care units develop HAIs and this figure increases substantially if neonatal intensive care units are considered. While progress has been made in decreasing the rates of HAI in the hospital these infections remain a major

burden on the medical system In a study published in 2013 the annual estimated costs of the five most common HAIs in the United States totaled 9.8 billion An estimated 648,000 patients developed HAIs in hospitals within the US in 2011 and children with healthcare associated bloodstream infection have a greater than three fold increased risk of death While a number of texts discuss HAIs in the broader context of infectious diseases or pediatric infectious diseases such as Mandell's Principles and Practice of Infectious Diseases or Long and Pickering's Principles and Practice of Pediatric Infectious Diseases no single text specifically focuses on the epidemiology diagnosis and management of HAI in children Many infectious diseases texts are organized based on the microbiology of infection and from this starting point then discussing the clinical syndromes associated with the organism of interest For instance a chapter on Staphylococcus aureus may contain a brief discussion of the role of S aureus in surgical site infections in the wider context of all staphylococcal disease For clinicians caring for children at the bedside however the clinical syndrome is typically appreciated and intervention necessary prior to organism identification We propose a text that details both the general principles involved in HAIs and infection prevention but also provides a problem oriented approach Such a text would be of interest to intensivists neonatologists hospitalists oncologists infection preventionists and infectious diseases specialists The proposed text will be divided into three principle sections 1 Basic Principles of Infection Control and Prevention 2 Major Infectious Syndromes and 3 Infections in Vulnerable Hosts Chapters in the Major Infectious Syndromes section will include discussion of the epidemiology microbiology clinical features diagnosis medical management or surgical management as appropriate and prevention of the disease entity of interest Chapters will seek to be evidenced based as much as possible drawing from the published medical literature as well as from clinical practice guidelines such as those from the Infectious Diseases Society of America when applicable We intend to include tables figures and algorithms as appropriate to assist clinicians in the evaluation and management of these often complex patients Finally we intend to invite authors to participate in this project from across a number of medical specialties including infectious diseases infection control critical care oncology and surgery to provide a multidisciplinary understanding of disease It is our intent to have many chapters be co written by individuals in different subspecialties for instance a chapter on ventilator associated pneumonia may be co written by both infectious disease and critical care medicine specialists Such a unique text has the potential to provide important guidance for clinicians caring for these often fragile children

Epidemic of Medical Errors and Hospital-Acquired Infections William Charney, 2012-02-06 Medical error as defined in Epidemic of Medical Errors and Hospital Acquired Infections Systemic and Social Causes encompasses many categories including but not limited to medical error hospital acquired infections medication errors deaths from misdiagnosis deaths from infectious diarrhea in nursing homes surgical and post operative complications lethal blood clots in veins and excessive radiation from CT scans When the deaths from these categories are counted they become the leading cause of fatality to Americans outpacing cancer and heart disease Add the numbers of fatalities mortality to the millions each year who are injured

morbidity and whose quality of life is forever effected and an epidemic of harm is defined The book describes the many systemic and social causes of medical error and iatrogenic events all of which are cited in the peer review science that have a direct effect on the epidemic of patient injury but are rarely or never considered These systemic causes include factory medicine for profit medicine staffing ratios in clinical and non clinical departments shift work healthcare working conditions lack of accountability legal issues that conflict with patient safety issues bullying and hierarchical relationships training of healthcare workers that never rises to the level of risk and injury to healthcare workers The premise of the book is that if the systemic or social causes are not considered or changed then medical error will continue to be an epidemic and no substantial impact in the numbers will be realized An expert with 30 years of experience as a health and safety officer in healthcare and as an activist for community health and safety issues editor and author William Charney explores the issues surrounding medical errors and examines the science behind possible solutions He presents an efficient dialogue that produces a more systemic exploration and targeting of the causes of medical error and drives an exacting message we are dealing with an epidemic of harm and unless systemic issues are solved little will change to subdue the epidemic Information on the June 2012 Conference on the Epidemic of Medical Errors Hospital Acquired Infections in the US and Canada the Systemic Causes can be found on the CRC Press Issuu page

Hospital Infection: From Miasmas to MRSA Graham A. J. Ayliffe,Mary P. English,2003-06-05 This is an absorbing account of the continuing battle to control hospital infections from the earliest days of hospital care when bad air or miasma was thought to be the cause to the present day and the emergence of antibiotic resistant superbugs such as MRSA and necrotizing fasciitis It succeeds on many levels as

a fascinating social history of hospital care from mediaeval times when patients endured verminous conditions to the present day as a survey of the rise fall and emergence of new nosocomial infections and as a chronological account of the emergence of medical microbiology and infection control The pivotal roles of key personalities such as Joseph Lister Florence Nightingale Louis Pasteur and Robert Koch are highlighted and the history of this subject illuminates not only why hospitals and infections have had such an intimate and long relationship but one that seems destined to continue well into the future
