From Reclamation To Sustainability:

From Reclamation to Sustainability Lawrence J. MacDonnell, 1999 From Reclamation to Sustainability tells the story of four places in the West the Arkansas Valley and the Grand Valley of Colorado the Truckee Carson basins of California and Nevada and the Yakima Basin in Washington where development and use of water primarily for irrigated agriculture have been central to economic and social development In these places and many others the reclamation vision that helped settle the West now competes with a vision of a sustainable West All four regions tell of the essential role water has played in western agriculture and the importance of this agriculture for settlement of much of the West They also exemplify the many difficulties of turning prairie and desert into productive croplands and MacDonnell describes the sometimes extraordinary human commitment and effort that made this possible Now however western water resources have been developed beyond their sustainable capacity in an attempt to irrigate as much land as possible and MacDonnell illustrates the consequences of this overdevelopment including declining rural communities dewatered streams incapable of supporting native species and degraded water quality He also provides examples of efforts to repair some of the damages and of the challenges involved in such restoration MacDonnell argues that sustainable use of the West's water resources depends on reducing the gap between diverted water and used water restoring the functional ecological integrity of water sources allowing uses of developed water to change and effective collaborative public private processes that help reconcile competing interests in water He concludes that the manner in which the West moves toward sustainable use of its limited water resources particularly as it affects irrigated agriculture matters at least as much as achieving sustainable use It matters because the choices we make will have important consequences for the future West

Sustainability Management and Strategy
Igazeuma Adikema Okoroba, Enoch Opare Mintah, Robert Ebo Hinson, 2025-06-30 With Africa predicted to emerge as a leading market in the coming years the debate on sustainability especially on the mitigation of business impact on the continent's environment and society cannot be underestimated Prior to the worsening impact of climate change the continent has historically been struggling to consolidate sustainability efforts in driving social and environmental protection caused by both foreign majorly and local business activities in the region To capture current social and environmental injustice plaguing the African continent Secretary General Prof Petteri Taalas of the World Meteorological Organization WMO opined that Africa is responsible for less than 10 percent of global greenhouse gas emissions but it is the continent which is the least able to cope with the negative impacts of climate change Heatwaves heavy rains floods tropical cyclones and prolonged droughts are having devastating impacts on communities and economies with increasing numbers of people at risk Sustainability Reporting Frameworks have empowered sustainability leaders most especially Chief Sustainability Officers CSOs in organizations to develop practical strategies for leading sustainability related issues while driving systemic change for collective thinking towards mitigating the impact of climate change on society and the environment While there is

undoubtedly a plethora of standards codes and toolkits to help frame the sustainability drive with leading CSOs around the globe sharing their lived experiences the narrative for best practices and what the content of sustainability initiatives and reporting should be have been skewed to the Western or advanced economies narrative This reporting has drowned out other continent specific narratives that offer a diverse pool of perspectives and locally rich content on some sustainability actions and achievements especially from CSOs The role of business sustainability leaders and CSOs in Africa in positioning the continent as the market of tomorrow with sound and robust sustainability practices needs to be spotlighted Owing to the gap this book brings the urgency to light through case studies and stories from leading African businesses while capturing their sustainability strategies and achievements This book moves beyond the experience and context of business in advanced economies and responds to the need for an alternative narrative of sustainability leadership in Africa The focus of this book is on the role of sustainability leadership over the last decade and discusses the contributions and challenges of navigating this multi disciplinary function in different sectors The authors share their insight into this under researched and under reported perspective highly relevant to business and sustainability and environmental social and governance ESG reporting in a growing region like Africa Sustainable Development Opportunities in Mining Communities United States.
