What Psychotherapists Learn from Their Clients Sherry L. Hatcher PhD ABPP, 2014-11-07 What Psychotherapists Learn from Their Clients Sherry L Hatcher PhD ABPP Editor How I wish I'd had the benefit of What Psychotherapists Learn from Their Clients several decades ago This book illuminates a seldom discussed but crucial area of the treatment relationship The popular notion held by patients and clinicians alike is that the therapist is there to treat the patient S he is the expert the seer holding all the answers the keys to the basement and the combination to the vault where all the secrets are kept Embedded in this way of thinking is also something of a pretense that because the psychotherapist is present in the role of clinician s he is not involved in the process and certainly not affected by the client other than in a countertransferential manner Perhaps the traditional focus in our training that therapy is not a social relationship that boundaries are an essential and ethical part of practice and that we must learn and adhere to role appropriate behavior results in our learning to avoid an awareness of our patients influence on us and of what we learn from them not just about them Largely hidden from this perspective is the fact that one of the operative terms in the idea of the treatment relationship is relationship The therapist is 50 percent of the dyad fully one half of the enterprise And among psychotherapists it is a widely known secret that being in the privileged position of learning about the private struggles secret torments and desires and fundamental heartbreaks of other human beings affects us deeply and throughout our lives Margaret Cramer PhD ABPP

The Five Stages of Culture Shock Paul Pedersen, 1994-12-12 The educational literature suggests that international contact contributes to a comprehensive educational experience The Five Stages of Culture Shock examines an international shipboard educational program and seeks to identify specific insights resulting from informal extracurricular contact between students and host nationals in the context of culture shock experiences Using the critical incident methodology Pedersen analyzes students responses to nearly 300 specific incidents

which resulted in insights that apply to the students own development as well as the sociocultural context of the host countries This use of critical incidents shows one way to evaluate and assess the subjective experiences of the informal curriculum More broadly the analysis sheds light on the concept of culture shock as a psychological construct
