Intrinsically Motivated Learning in Natural and Artificial Systems Gianluca Baldassarre, Marco Mirolli, 2013-03-29
It has become clear to researchers in robotics and adaptive behaviour that current approaches are yielding systems with limited autonomy and capacity for self improvement To learn autonomously and in a cumulative fashion is one of the hallmarks of intelligence and we know that higher mammals engage in exploratory activities that are not directed to pursue goals of immediate relevance for survival and reproduction but are instead driven by intrinsic motivations such as curiosity interest in novel stimuli or surprising events and interest in learning new behaviours The adaptive value of such intrinsically motivated activities lies in the fact that they allow the cumulative acquisition of knowledge and skills that can be used later to accomplish fitness enhancing goals Intrinsic motivations continue during adulthood and in humans they underlie lifelong learning artistic creativity and scientific discovery while they are also the basis for processes that strongly affect human well being such as the sense of competence self determination and self esteem This book has two aims to present the state of the art in research on intrinsically motivated learning and to identify the related scientific and technological open challenges and most promising research directions The book introduces the concept of intrinsic motivation in artificial systems reviews the relevant literature offers insights from the neural and behavioural sciences and presents novel tools for research The book is organized into six parts the chapters in Part I give general overviews on the concept of intrinsic motivations their function and possible mechanisms for implementing them Parts II III and IV focus on three classes of intrinsic motivation mechanisms those based on predictors on novelty and on competence Part V discusses mechanisms that are complementary to intrinsic motivations and Part VI introduces tools and experimental frameworks for investigating intrinsic motivations The contributing authors are among the pioneers carrying out fundamental work on this topic drawn from related disciplines such as artificial intelligence robotics artificial life evolution machine learning developmental psychology cognitive science and neuroscience The book will be of value to graduate students and academic researchers in these domains and to engineers engaged with the design of autonomous adaptive robots The contributing authors are among the pioneers carrying out fundamental work on this topic drawn from related disciplines such as artificial intelligence robotics artificial life evolution machine learning developmental psychology cognitive science and neuroscience The book will be of value to graduate students and academic researchers in these domains and to engineers engaged with the design of autonomous adaptive robots

Language and Superdiversity Karel Arnaut, Jan Blommaert, Ben Rampton, Massimiliano Spotti, 2015-12-22 A first synthesis of work done in sociolinguistic superdiversity this volume offers a substantial introduction to the field and the issues and state of the art research papers organized around three themes Sketching the paradigm Sociolinguistic complexity Policing complexity The focus is to show how complexity rather than plurality can serve as a lens through which an equally vast range of topics sites and issues can be tied together Superdiversity captures the acceleration

and intensification of processes of social mixing and fragmentation since the early 1990s as an outcome of two different but related processes new post Cold War migration flows and the advent and spread of the Internet and mobile technologies The confluence of these forces have created entirely new sociolinguistic environments leading to research in the past decade that has brought a mixture of new empirical terrain extreme diversity in language and literacy resources complex repertoires and practices of participants in interaction and conceptual challenges Language and Superdiversity is a landmark volume bringing together the work of the scholars and researchers who spearhead the development of the sociolinguistics of superdiversity

Geometry of Nonholonomically Constrained Systems Richard H. Cushman, Hans Duistermaat, J?drzej ?niatycki, 2010 This book gives a modern differential geometric treatment of linearly nonholonomically constrained systems It discusses in detail what is meant by symmetry of such a system and gives a general theory of how to reduce such a symmetry using the concept of a differential space and the almost Poisson bracket structure of its algebra of smooth functions The above theory is applied to the concrete example of Carathodory's sleigh and the convex rolling rigid body The qualitative behavior of the motion of the rolling disk is treated exhaustively and in detail In particular it classifies all motions of the disk including those where the disk falls flat and those where it nearly falls flat The geometric techniques described in this book for symmetry reduction have not appeared in any book before Nor has the detailed description of the motion of the rolling disk In this respect the authors are trail blazers in their respective fields **The Greenwood Library of American Folktales** Thomas A. Triangle Republics I Jonathan Kief, 2025-09-16 In Korea the

end of the Second World War in 1945 brought both liberation from Japanese colonial rule and the division of the nation by the triumphant Allies. The peninsula was not only decoupled from its former colonial metropole but also carved up into two halves that were subsequently incorporated into the rival blocs of the emerging Cold War order. Although the two Koreas are typically seen as isolated from each other, texts continued to circulate between them with the assistance of Korean diasporic and other colleagues in Japan throughout the ensuing decades. Jonathan Kief follows the triangular flow of texts linking North Korea, South Korea, and Japan from 1945 until the 1980s, revealing overlooked paths of interaction and exchange. He highlights the creative ways in which poets, playwrights, novelists, critics, and academics crossed boundaries of language, ideology, genre, and geography to challenge the stability of the Cold War. By showing how writers in North and South Korea engaged in dialogue via the mediation of a multiethnic set of colleagues in Japan, *Triangle Republics* offers a new perspective on this era, emphasizing its vibrant, dynamic, and interconnected nature. **Love, Life Lessons** Erica Rayvon

The title comes from the scripture in the Bible from the book of Matthew. Jerry Mack goes on a long deserved vacation and gets caught in some kind of time warp and ends back Jesus s day. It s a book that infuses religion since it s about the second coming of Jesus Christ. It also has archaeology, espionage, and fantasy. Jerry goes on an adventure he never dreamed possible or bargained for. *My It to You* John McGreal, 2013-12-01. In new forms of writing, this is one of three books which represent stages of a serious artistic search for a modern dialectic of mark, word, and image spanning twenty years. With an aesthetic that dissolves conventional boundaries of visual Art and Literature, the abstract, alphabetical poem *my it to you* and the narrative poem *In the Way of It* are both written solely in monosyllables. The selection of spaced prints of alphabetical poems such as *Rubicon* in *The Poetry of It* was inspired initially by a surrealist experiment in automatic writing in 1988 which triggered an extensive period in which dreams erupted onto the page in the written form of fragmented words. Written in the form of double columns, *Mac s Story* in *The Way of It* gives an account of how these works came to be made along with *The Book of It*, his humorous satire on contemporary capitalism published in 2010. All three new works celebrate the Centenary of the revolution in visual language made by the avant gardes in what Marjorie Perloff calls *The Futurist Moment* in Modernist Art.
