Understanding Extreme Sports: A Psychological Perspective Eric Brymer, Francesco Feletti, Erik Monasterio, Robert D. Schweitzer, 2020-03-30

Extreme sports those activities that lie on the outermost edges of independent adventurous leisure activities where a mismanaged mistake or accident would most likely result in death have developed into a significant worldwide phenomenon Brymer Patterson 2002 and Generation Z turn to extreme sports because they are popular and linked to escapism Giannoulakis Pursglove 2017 Arguably extreme sports now support a multi billion dollar industry and the momentum seems to be intensifying Traditional explanations for why extreme sports have become so popular are varied For some the popularity is explained as the desire to rebel against a society that is becoming too risk averse for others it is about the spectacle and the merchandise that is associated with organised activities and athletes For others it is just that there are a lot of people attracted by risk and danger or just want to show off For others still it is about the desire to belong to sub cultures and the glamour that goes with extreme sports Some seek mastery in their chosen activity and in situations of significant challenges This confusion is unfortunate as despite their popularity there is still a negative perception about extreme sports participation There is a pressing need for clarity The dominant research perspective has focused on positivist theory driven perspectives that attempt to match extreme sports against predetermined characteristics For the most part empirical research has conformed to predetermined societal perspectives Other ways of knowing might reveal more nuanced perspectives of the human dimension of extreme sport participation This special edition brings together cutting edge research and thought examining psychology and extreme sports with particular attention payed to the examination of motivations for initial participation continued participation effective performance and outcomes from participation

Gerontechnology. A Clinical Perspective Alberto Pilotto, Walter Maetzler, 2023-07-21 This book aims at disseminating information and knowledge in Gerontechnology a topic that is still considered a specific area of interest for techno experts i e informatics engineers bio engineers bio statistics etc while there is a relatively low diffusion of technological expertise among clinicians and other health professionals who are involved in the care of older people In many parts of the world average life expectancy is rising consistently and at the same time technology is developing at a dramatic pace This means having completely new options for the diagnosis treatment and follow up of diseases and disabilities of older people but also a new challenge to improve the quality of life by promoting an active and healthy aging at population level This book explores the technical developments that are beginning to change the management of diseases and disabilities of geriatric patients These include advanced Information and Communication Technologies ICT i e the new online services in healthcare and electronic medical health records Assistive Technologies AT i e behavior and motility monitoring sensorial tools smart homes tools and telemedicine tools as well as Human Computer Interaction technologies HCI i e robots for supporting people with mobility or cognitive limitations humanoid robots exoskeletons and rehabilitation robots The Work is divided into three main parts 1 Technology in a world of aging people 2 Clinical applications of technologies in older people and 3 Older people and technologies interaction including privacy issues acceptability of technologies by older people and education and training of healthcare professionals in gerontechnology The book will be an invaluable tool for geriatricians and other health professionals who are involved in the care of older people

Quality of Life in Academia: New Perspectives for Assessing and Promoting Wellbeing in University Population Barbara Loera, Andreina Bruno, Sara Viotti, Imke Hindrichs, Lara Bertola, 2025-01-21 Over the last 20 years changes in higher education have stimulated research on academic working life Indeed the application of a market oriented system and new public management policies in higher education have increased the emphasis on internationalization accountability and management of academic work These changes have increased the complexity of the academic work profile which is characterized by teaching research and institutional demands including public engagement to strengthen the interaction between university industry and society The COVID 19 pandemic introduced far reaching challenges that have further increased the psychosocial work demands Universities continue to face continuous and rapid changes that have led to increased levels of work related stress for both teaching and research academic staff TRAS and technical and administrative staff TAS This scenario has also had a negative impact on the academic life and well being of university students

Obesity in Perspective: Summary of the conference. Commentaries, 1975 Education and Technology David W. Kritt, Lucien T. Winegar, 2007-12-05 There are numerous publications about education and technology What is missing is a balanced appraisal of the values and cognitive skills technology promotes and those it devalues This is important for education because the way we teach influences how children think and it is of more

general importance for the evolution of society If we wait until these issue are definitively resolved and have noticeable societal effects it will inevitably be too late Hence the need for informed debate now

Perspectives in Clinical Psychology Alexander Z. Guiora, Marvin A. Brandwin, 1968 Beyond the Brain Igor M. Arieviditch, 2017-08-24 The book outlines a fundamental alternative to the rising wave of aggressive biological reductionism and brainism in contemporary psychology and education It offers steps to achieving a daunting and elusive goal constructing a coherently non reductionist account of the mind The main obstacle to such a construction is identified as the centuries old contemplative fallacy that leads to entrenched dualisms and shackles major theoretical frameworks The alternative agentive activity perspective overcomes this fallacy by advancing the core principles of the cultural historical activity theory This innovative perspective charts a consistently non mentalist and non individualist view of psychological processes without discarding the individual mind A vast body of research and theories from Piaget and Dewey to sociocultural and embodied cognition approaches are critically engaged with a special focus on Piotr Galperin s contribution The notion of the embodied agent s object directed activity serves as a pivotal point for re conceptualizing the mind and its role in behavior In a radical departure from both the traditional mentalist and biologically reductionist frameworks psychological processes are understood as taking place beyond the brain as constituted by the agent s activities in the world From this standpoint many of Vygotsky s key insights including semiotic mediation internalization and cognitive tools are given a fresh scrutiny and substantially revised The agentive activity perspective opens ways to offer a bold vision for education developmental teaching and learning built on the premise that real knowledge is not information storage and retrieval and that education is not about knowledge transmission but instead it is about developing students minds
