**Unfolding Perceptual Continua** Liliana Albertazzi,2002-07-12 The book analyses the differences between the mathematical interpretation and the phenomenological intuition of the continuum The basic idea is that the continuity of the experience of space and time originates in phenomenic movement The problem of consciousness and of the spaces of

representation is related to the primary processes of perception. Conceived as an interplay between cognitive science, linguistics, and philosophy, the book presents a conceptual framework based on a dynamic and experimental approach to the problem of the continuum. Besides presenting the primitives of a theory of cognitive space and time, it presents a theory of the observer analyzing the relationship among perspective points of view and unity of consciousness. The book's chapters deal with the dynamic elaboration and recognition of forms from the lower to the higher processes in the various perceptual fields. Experimental analysis from visual, auditory, and tactile perception outlines the basic structures of intentionality and its counterpart in language and gesture. Series B

**Proceedings of the IEEE Workshop on Mathematical Methods in Biomedical Image Analysis**, 1996 Perception and Control of Self-motion Rik Warren, Alexander H.

Wertheim, 2014-01-14 This book presents studies of self motion by an international group of basic and applied researchers including biologists, psychologists, comparative physiologists, kinesiologists, aerospace and control engineers, physicians, and physicists. Academia is well represented and accounts for most of the applied research offered. Basic theoretical research is further represented by private research companies and also by government laboratories on both sides of the Atlantic. Researchers and students of biology, psychology, physiology, kinesiology, engineering, and physics who have an interest in self motion, whether it be underwater in space or on solid ground, will find this volume of interest. **Advances in Computers**, 1988-07-01 **Advances in Computers** **Object Recognition in Man, Monkey, and Machine** Michael J. Tarr, Heinrich H. Bulthoff, 1999-03-15 The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition. These interconnected essays on three dimensional visual object recognition present cutting edge research by some of the most creative neuroscientific, cognitive, and computational scientists in the field. Cassandra Moore and Patrick Cavanagh take a classic demonstration, the perception of two tone images, and turn it into a method for understanding the nature of object representations in terms of surfaces and the interaction between bottom up and top down processes. Michael J. Tarr and Isabel Gauthier use computer graphics to study whether viewpoint dependent recognition mechanisms can generalize between exemplars of perceptually defined classes. Melvyn A. Goodale and G. Keith Humphrey use innovative psychophysical techniques to investigate dissociable aspects of visual and spatial processing in brain injured subjects. D. I. Perrett, M. W. Oram, and E. Ashbridge combine neurophysiological single cell data from monkeys with computational analyses for a new way of thinking about the

mechanisms that mediate viewpoint dependent object recognition and mental rotation Shimon Ullman also addresses possible mechanisms to account for viewpoint dependent behavior but from the perspective of machine vision Finally Philippe G Schyns synthesizes work from many areas to provide a coherent account of how stimulus class and recognition task interact The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition

Hoffman, Chetan Prakash, 2014-06-28 Observer Mechanics A Formal Theory of Perception provides information pertinent to the fundamental aspects of perception This book provides an approach to the study of perception that attempts to be both general and rigorous Organized into 10 chapters this book begins with an overview of the structure of perceptual capacity This text then presents the relationship between observers and Turing machines Other chapters provide a formal framework in which to describe an observer and its objects of perception and then develop from this framework a perceptual dynamics This book discusses as well the conditions in which an observer may be said to perceive truly and discusses how stabilities in perceptual dynamics might permit the genesis of higher level observers The final chapter deals with the relationship between the formalisms of quantum mechanics and observer mechanics This book is a valuable resource for physicists psychophysicists philosophers cognitive scientists and perceptual psychologists
