*The Letters and Papers of Jan Hendrik Oort* J.K. Katgert-Merkelijn, 2012-12-06 The astronomer Jan Hendrik Oort 1900-1992 left behind an extensive collection of notes and correspondence both on his research and on matters that concerned him in a variety of official functions Upon Oort's death the collection was augmented by more personal papers letters journals and diaries The resulting collection forms a rich source of information on many aspects of twentieth century astronomy in which Oort played such an important role The scientific and personal material covers the entire span of time from Oort's early youth until his death To make these papers accessible to a wide circle of users the collection has now been catalogued and described the result is presented in this volume A name index and a subject index have been added to facilitate access The inventory is accompanied by a short biographical sketch and a number of photographs mostly relating to Oort's career as a scientist The original papers themselves are archived in the Leiden University Library

**Jan Hendrik Oort** Pieter C. van der Kruit, 2019-07-16 This book is the first thorough and overdue biography of one of the giants of science in the twentieth century Jan Hendrik Oort His fundamental contributions had a lasting effect on the development of our insight and a profound influence on the international organization and cooperation in his area of science and on the efforts and contribution of his native country This book aims at describing Oort's life and works in the context of the development of his branch of science and as a tribute to a great scientist in a broader sense The astronomer Jan Hendrik Oort from the Netherlands was founder of studies of the structure and dynamics of the Milky Way Galaxy initiator of radioastronomy and the European Southern Observatory and an important contributor to many areas of astronomy from the study of comets to the universe on the largest scales

**The Letters and Papers of Jan Hendrik Oort** Jan Hendrik Oort, 1997-05-31 An inventory of the 362 items representing the personal and professional papers of Dutch astronomer Oort 1900-92 held at the Leiden University Library Lists and describes each document in the item which often includes manuscripts comments outlines correspondence and miscellaneous notes The entries are presented in sections such as research and teaching the Leiden observatory astronomy in the Netherlands and world events Also includes a biographical sketch a primary bibliography a few reproductions and photographs Annotation copyrighted by Book News Inc Portland OR

**A History of Science in the Netherlands** Klaas van Berkel, Albert van Helden, L.C. Palm, 2023-07-03 In the 400 years of its modern history the Netherlands has produced a distinguished array of eminent mathematicians scientists and medical researchers including many Nobel prize winners and other internationally recognised figures from Stevin Snel and Huygens in the 17th century to Lorentz Kammerlingh Onnes Buys Ballot De Vries de Sitter and Oort in the 19th and 20th centuries Yet it has often been noted that the history of science in the Netherlands is underrepresented in the international literature The handbook *A History of Science in The Netherlands* aims to correct this situation by providing a chronological and thematic survey of the field from the 16th century to the present essays on selected aspects of science in the Netherlands and

reference biographies of about 65 important Dutch scientists Written by more than 10 experts from Europe and North America the handbook is the standard English language reference work for the field     Literature 1997, Part 1

Astronomisches Rechen-InstitutARI,2013-11-11 Astronomy and Astrophysics Abstracts is devoted to the recording summarizing and indexing of astronomical publications throughout the world Two volumes are scheduled to appear per year Volume 67 records 10 903 papers covering besides the classical fields of astronomy and astrophysics such matters as space flights related to astronomy lunar and planetary probes and satellites meteorites and interplanetary matter X rays and cosmic rays quasars and pulsars The abstracts are classified under more than one hundred subject categories thus permitting quick surveying of the bulk of material published on the same topic within six months For instance this volume records 119 papers on minor planets 155 papers on supernovae and 554 papers on cosmology     *The Rise of Radio Astronomy in the Netherlands* Astrid Elbers,2016-11-23 Radio astronomy was born during the Second World War but as this book explains the history of early Dutch radio astronomy is in several respects rather anomalous in comparison to the development of radio astronomy in other countries The author describes how these very differences led the Netherlands to become one of the world leaders in radio astronomy Dominated by the Leiden astronomer Jan Hendrik Oort the field embarked on an era of success and to this day the country still holds a leading position To tell this story the book focuses on three key events in the period 1940 1970 namely the construction of the radio telescopes in Kootwijk 1948 in Dwingeloo 1956 and in Westerbork 1970 These projects show that Dutch radio astronomers must not be seen as merely scientists but also as strategic lobbyists networkers and organizers in a specific political and economic context It was in the process of planning designing and constructing these instruments that the interests of the astronomers industrial partners politicians and lobby groups merged to create today s existing research centers for radio astronomy     History of Oriental Astronomy S.M. Proceedings of the Joint Discussion 17 at the 23rd IAU General Assembly organised by the Commission 41 held in Kyoto Japan August 25 26 1997     Mechanics of Turbulence of Multicomponent Gases Mikhail Ya. Marov,Aleksander V. Kolesnichenko,2006-04-18 Space exploration and advanced astronomy have dramatically expanded our knowledge of outer space and made it possible to study the indepth mechanisms underlying various natural phenomena caused by complex interaction of physical chemical and dynamical processes in the universe Huge breakthroughs in astrophysics and the planetary sciences have led to increasingly complicated models of such media as giant molecular clouds giving birth to stars protoplanetary accretion disks associated with the solar system s formation planetary atmospheres and circumplanetary space The creation of these models was promoted by the development of basic approaches in modern mechanics and physics paralleled by the great advancement in the computer sciences As a result numerous multidimensional non stationary problems involving the analysis of evolutionary processes can be investigated using wide range numerical experiments Turbulence belongs to the most widespread and at the same time the most complicated natural phenomena related to the

origin and development of organized structures dies of different scale at a definite flow regime of fluids in essentially non linear drodynamic systems This is also one of the most complex and intriguing sections of the mechanics of fluids The direct numerical modeling of turbulent flows encounters large mathematical difficulties while the development of a general turbulence theory is hardly possible because of the complexity of interacting coherent structures Three dimensional non steady motions arise in such a system under loss of la nar flow stability defined by the critical value of the Reynolds number

**Multielement System Design in Astronomy and Radio Science** L.E. Kopilovich,L.G. Sodin,2001-11-30 The multielement systems have been widely used in many fields of astron omy and radio science in the last decades This is caused by the increasing demands on the resolution and sensitivity of such systems over the wide range of the electromagnetic wavelengths from gamma up to radio The ground based optical and radio interferometers gamma ray and X ray or bital telescopes antenna arrays of radio telescopes and also some other radio devices belong to scientific instruments using multielement systems There fore the current problems of the optimal construction of such systems or precisely those of searching for the best arrangement of the elements in them were formulated A rather large number of scientific papers including those of the authors is devoted to these problems and we believe that the time has come to integrate the basic results of the papers into the mono graph The offered book consists of three parts The first part is concerned with the optimal synthesis of optical and radio interferometers of various types and purposes the synthesis of non equidistant antenna arrays is con sidered in the second part and the methods for the construction of coded masks for X ray and gamma ray orbital telescopes are expounded in the third one Since in the text combinatorial constructions which are little known to astronomers are used the necessary information is given in the appendices Various tables containing the parameters of the systems consid ered are also represented

**Journal for the History of Astronomy** ,1999 *The Sun and Space Weather* Arnold Hanslmeier,2002-06-30 Since the Sun is the main source of space weather effects the first part of the book is devoted to a general introduction to the physics of the Sun A better understanding of the phenomena underlying solar activity is also important for prediction of solar outbursts and thus for establishing alert systems for space missions and telecommunication systems The book contains the following topics possible influence of the Sun on the Earth s climate the effects of radiation on humans in space and the expected radiation dose from various solar events disturbances of the Earth s ionosphere and the implications of radio communication at different wavelength ranges possible hazardous asteroids and meteoroids and their detection and space debris and special shielding of spacecraft In the cited literature more detailed information about the topics may be found This book provides an introduction and overview of modern solar terrestrial physics for students as well as for researchers in the field of astrophysics solar physics geophysics and climate research

**Merging Processes in**

**Galaxy Clusters** L. Feretti, I.M. Gioia, G. Giovannini, 2006-04-18 Mergers are the mechanisms by which galaxy clusters are assembled through the hierarchical growth of smaller clusters and groups Major cluster mergers are the most energetic events in the Universe since the Big Bang Many of the observed properties of clusters depend on the physics of the merging process These include substructure shock intra cluster plasma temperature and entropy structure mixing of heavy elements within the intra cluster medium acceleration of high energy particles formation of radio halos and the effects on the galaxy radio emission This book reviews our current understanding of cluster merging from an observational and theoretical perspective and is appropriate for both graduate students and researchers in the field

**Plasma Astrophysics** Arnold O. Benz, 2005-11-28 This textbook is intended as an introduction to the physics of solar and stellar coronae emphasizing kinetic plasma processes It is addressed to observational astronomers graduate students and advanced undergraduates without a background in plasma physics Coronal physics is today a vast field with many different aims and goals Soing out the really important aspects of an observed phenomenon and using the physics best suited for the case is a formidable problem There are already several excellent books oriented toward the interests of astrophysicists that deal with the magnetohydrodynamics of stellar atmospheres radiation transport and radiation theory In kinetic processes the different particle velocities play an important role This is the case when particle collisions can be neglected for example in very brief phenomena such as one period of a high frequency wave or in effects produced by energetic particles with very long collision times Some of the most persistent problems of solar physics like coronal heating shock waves flare energy release and particle acceleration are likely to be at least partially related to such processes Study of the Sun is not regarded here as an end in itself but as the source of information for more general stellar applications Our understanding of stellar processes relies heavily in turn on our understanding of solar processes Thus an introduction to what is happening in hot dilute coronae necessarily starts with the plasma physics of our nearest star
